The vertical coherent instabilities which occur in bunched particle beams were studied. The velocity of a single particle in a bunch is not constant, but rather consists of an equilibrium velocity and an oscillation about that. The single particle equations of motion and the Vlasov equation to obtain an integral equation which governs the coherent motion of a single bunch of particles are used. The solutions to the integral equation are then examined in two different regions. For the case of a bunch long compared to the characteristic wavelength of the instability, two regions of instability were found. The first is a region of slow blowup at low currents (growth rate less than the synchrotron frequency). The second is a region of fast blowup (growth rate much greater than the synchrotron frequency). For the case of a bunch shorter than the characteristic wavelength of the instability the behavior is quite different. Dissert. Abstr.

TWO-DIMENSIONAL INTERACTION OF ION-ACOUSTIC SOLITONS Ph.D. Thesis
Patrick Aubrey Folkes 1981 121 p
Avail: Univ. Microfilms Order No. 8125285

The two dimensional nonlinear interaction of two planar ion acoustic solitons were studied experimentally. When the angle between the wave vectors of the two interacting solitons is small and the solution amplitudes approach a critical value, a resonant nonlinear interaction occurs resulting in the formation of a new soliton. The measured spatial structure of the density perturbation near resonance and experimental measurements of the phase shift and the amplitude enhancement ratio show reasonably good agreement with theory. When two solitons interact at large angles, only a linear superposition of the two solitons is observed with no evidence of a phase shift not the formation of a new soliton. Contrary to theoretical results for small angles and soliton amplitudes larger than the critical value, no singular solitons were observed. Dissert. Abstr.

ENERGY TRANSFER IN MOLECULAR COLLISIONS Ph.D. Thesis

Eduardo Fermin Vilallonga 1981 162 p
Avail: Univ. Microfilms Order No. 8127473

Vibrational and rotational energy transfer in hyperthermal molecular collisions are investigated by means of time correlation function methods. Within this approach, the collisional differential cross section is expressed as the Fourier transform of the time correlation function of the transition operator, which evolves in time in accordance with the internal motions of the noninteracting molecules. The approach used allows the systematic introduction of approximations to the transition operator, which are based on models of the intermolecular forces and of the collision dynamics, the resulting correlation functions are readily evaluated for most polyatomics without need of internal state or partial wave expansions. The multicenter representation of the intermolecular potential is investigated, and multicenter surfaces are developed for ther interaction of Li(+) with CO and with CO2. Combining these developments, differential cross sections for the vibrational and rotational excitation of N2, CO and CO2 in collisions with hyperthermal Li(+) ions are calculated. Dissert. Abstr.

NUCLEAR MATTER WITH REALISTIC HAMILTONIANS Ph.D. Thesis

Isaac Lagaris 1981 159 p
Avail: Univ. Microfilms Order No. 8127625

Determination of the nuclear Hamiltonian is a prerequisite for development of a microscopic theory to explain the structure and the properties of observed nuclei and neutron stars. It may contain terms associated with two, three or many particle interactions. Some theoretical methods designed to handle the nuclear matter many body problem are reviewed. A realistic V sub 14 model of two nuclear interaction was obtained by fitting the available two body data in S, P, D and F waves. The variational theory was extended to treat this realistic interaction model and nuclear matter properties were calculated with it neglecting many nucleon interactions. A form for a three nucleon interaction (TNI), inspired from the meson theory of nuclear interactions is postulated. The effect of TNI on the energy of nuclear matter is described with three parameters to obtain the empirical energy, density and compressibility of nuclear matter. The effective nuclear hamiltonian obtained in this work may be used to study the equation of state of hot and cold nucleon matter, the structure of neutron stars, and the volume part of the nucleon nucleus optical potential. Dissert. Abstr.

NUCLEAR MAGNETIC RESONANCE STUDIES OF TRANSITION METAL COMPLEXES Ph.D. Thesis

Michael Andrew Freeman 1981 200 p
Avail: Univ. Microfilms Order No. 8125577

Aminopolycarboxylate ligands with three facially arranged dentates form stable oxomolybdenum complexes in solution. At pH6, ligands containing amine and carboxylate dentates form complexes containing the MoO3 cis moiety. Ligands with a hydroxyl dentate form dimeric complexes with a Mo2O5(2+) oxobridged core. The hydroxyl proton is lost in the reaction. The transinfluence of coordinated alkoxyl dentates determines the site of the oxobridge. A correlation of transinfluence with other oxobridged forms is seen. A qualitative measure of the transinfluence of ligands is obtained from crystal structure data and these are correlated to proton affinities of model compounds. Oxygen 17 NMR chemical shifts of MoO3L complexes are far morp sensitive to transinflurences than crystal structure bond distance measurements. The O-17 shifts of oxomolybdenum complexes and oxoanions reveal a smooth, nonlinear relation between chemical shift and MoO bond length. Dissert. Abstr.

NEUTRON ACTIVATION ANALYSIS OF NUCLIDES FROM STELLAR AND MAN-INDUCED NUCLEAR REACTIONS Ph.D. Thesis

Lawrence Lee Oliver 1981 109 p
Avail: Univ. Microfilms Order No. 8123584

Neutron activation and gamma counting were used to determine the relative abundances of six stable tellurium isotopes in the acid-etched residues of the Allende meteorite. The results were correlated with the isotopic compositions of xenon and the elemental abundances of helium and neon in similarly prepared residues. Nucleosynthesis appears to be the only viable explanation or the anomalous isotopic and elemental compositions observed in these residues. Results suggest that the solar system condensed from an isotopically and chemically zoned nebula that was produced by the explosion of a supernova, concentric with the present Sun. A combination of neutron activation and mass spectrometry was used to determine the concentrations of fissiogenic iodine 129 and stable iodine 127 in rain, milk and the thyroids of man, cow and deer from Missouri. Rain and deer thyroids show the highest average values of the iodine 129/iodine 127 ratio. Milk and the thyroids of cattle and humans show successively lower values of the iodine 129/iodine 127 ratio due to dietary additives of mineral iodine and to biological averaging. Dissert. Abstr.

N82-17974 Arkansas Univ., Fayetteville.

RECENT INJECTIONS OF NUCLEAR DEBRIS IN THE ATMOSPHERE Ph.D. Thesis

Stanley Warren Stevens 1981 139 p
Avail: Univ. Microfilms Order No. 8127266

The Sr-89/Sr-90 and Ba-140/Sr-90 ratio variation in rain and snow samples were studied. The presence of fresh nuclear debris was detected following the Chinese tests. A tropospheric cycling effect was clearly indicated in the radiostrontium and radiobarium data. The stratospheric residence time for Sr-90 was calculated to be 1.00 yr (stratospheric residence half-time = 0.71 yr). The mean tropospheric residence times were compared to the mean residence times determined from long-lived radon daughters following each of the Chinese tests. Results from the measurements of Sr-89/Sr-90 ratios in rain indicate that the mean residence time of the fallout particles in the lower stratosphere is 200 + or - 100 days. Nuclear debris injected into the atmosphere by the Three-Mile-Island accident was not detected in rain samples. Dissert. Abstr.

N82-17975 Florida State Univ., Tallahassee.

LONG RANGE INTERMOLECULAR POTENTIALS FROM STATIC FORM FACTORS Ph.D. Thesis

Ker-Fong Lee 1981 117 p
Avail: Univ. Microfilms Order No. 8125776

An expression is derived for the charge density susceptibility which under the Unsold approximations, reduces to the Fourier transforms of electron density functions. When considering uncorrelated wavefunctions, the susceptibility is given simply by static form factors in terms of which the second order Coulomb energy may be calculated. This is equivalent to applying the Unsold approximations directly unto the second order Coulomb energy expression in the usual time independent Rayleigh-Schrodinger perturbation theory. Using the interactions of hydrogen-hydrogen and helium-helium diatoms as test cases, the various integrals for their second order dispersion energies were evaluated numerically and analytically. The two approaches differ in that while the latter requires analytic form factors, the former can use both analytic as well as the readily available tabulated form factors. Their results are found to be in excellent agreements. Dissert. Abstr.

SPACE AND TIME RESOLVED MEASUREMENTS OF ION ENERGY DISTRIBUTIONS BY NEUTRAL BEAM INJECTION

IN TORTUR 2

H. J. B. M. Brocken Oct. 1951 36 p refs Sponsored by Euratom and Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek (ZWO)
(Rept-81-137) Avail: NTIS HC A03/MF A01

The method is used in the TORTUR 2 Tokamak to study the space and time evolution of the ion temperature profile of the plasma. The method fails when multiple charge exchanges occur between the beam region and the plasma edge. Measurements are disturbed by attenuation of the flux of charge exchange neutrals originating from the beam and by neutrals lost from the beam becoming part of the neutral gas background, thereby enhancing the flux of charge exchange neutrals originating from the remainder of the plasma. Beam modulation, phase sensitive detection, and good access overcome these effects.

RELAXATION PHENOMENA IN OPTICALLY PUMPED MERCURY ISOTOPES Final Scientific Report, 1 Jul. 1976 - 30 Jun. 1981

J. H. Simpson, P. A. Heimann, M. J. Kelly, and D. I. Shernoff 31 Aug. 1981 104 p refs
(Contract F49260-76-C-0009; AF Proj. 2301)
(AD-A107604; KD-81-15; AFOSR-81-0724TR) Avail: NTIS HC A06/MF A01 CSCL 20/8

Relaxation measurements of optically pumped 199 Hg and 201 Hg in nuclear magnetic resonance (NMR) cells have shown that the activation energy for adsorption of ground state mercury atoms ranged from .22 eV to .24 eV for a variety of materials. These measurements also provided a means of determining the temperature dependence of the product of concentration and strength of paramagnetic centers on the inner cell surfaces. The origins and effects of both randomly-fluctuating and steady-state quadrupole perturbations on 201 Hg have been clarified. A calculation predicts that the relaxation rate of 201 Hg in a cube-shaped cell should be independent of cell orientation. This prediction was verified experimentally. Another calculation, which modelled 201 Hg as a single four-level spin system, predicted a functional form for the non-exponential decay of 201 Hg in the presence of a quadrupole perturbation. These predictions were also verified experimentally. Techniques have been developed for producing mercury NMR cells with long relaxation times and stable characteristics.

VERTICAL COHERENT INSTABILITIES IN BUNCHED PARTICLE BEAMS Ph.D. Thesis

R. D. Ruth Jul. 1981 94 p refs
(Contract DE-AC02-76CH-00016)
(DE82-003246; BNL-51425) Avail: NTIS HC A05/MF A01

The velocity of a single particle in a bunch is not constant, but rather consists of an equilibrium velocity and an oscillation about that. This synchrotron oscillation occurs at a frequency which is in general much less than the other characteristic frequencies of the system: the revolution frequency and the transverse betatron frequencies. The approach illuminates the effect of the synchrotron frequency in setting the time scale for an instability, without making restrictive assumptions on the relative size of the synchrotron frequency and the coherent frequency shift (on growth rate).

THE LASER ACCELERATOR-ANOTHER UNICORN IN THE GARDEN

L. N. Hand Jul. 1981 21 p refs Sponsored in part by the Guggenheim Foundation and the Science Research Council
(PB82-115197; Rept-62/81) Avail: NTIS HC A02/MF A01 CSCL 20G

Some proposed techniques for using laser beams to accelerate charged particles was reviewed. Two specific ideas for grating type accelerating structures are discussed. Speculations are presented about how a successful laser accelerator could be used in a multipass collider; a type of machine which would have caharacteristics intermediate between those of synchrontrons and linear (single pass) colliders. No definite conclusions about practical structures for laser accelerators are reached, but it is suggested that a serious effort be made to design a small prototype machine. Achieving a reasonable luminosity demands that the accelerator either be a cw machine or that laser peak power requirements to be much higher than those presently available. Use of superconducting gratings requires a wavelength in the sub-millimeter range.

A SPACE-TIME STUDY OF DOUBLE SCATTERING IN HADRON DEUTERON COLLISIONS Ph.D. Thesis

Eric Osbourne Rogers 1981 374 p
Avail: Univ. Microfilms Order No. 8126138

A space-time picture of double scattering in the deuteron (those events where both the neutron and proton interact with the incoming hadron), is developed. Work is done in the deuteron rest frame using the assumption that processes involving large

virtual masses are damped. For the general case, the process is shown to consist of sequential scatterings, while for large momenta, due to Lorentz contraction, separation between neutron and proton may be neglected and the Abramovskii, Gribov, Kancheli cutting rules derived. The process is modeled with the Mandelstam diagram and verifies previous results by explicit calculation. A numerical estimate is then made of the size of the effect and a comparison with experimental data is made.

APPLICATION OF EIKONAL APPROXIMATION TO CHARGE TRANSFER IN ENERGETIC ION-ATOM COLLISIONS Ph.D. Thesis
Tak-San Ho 1981 92 p
Avail: Univ. Microfilms Order No. 8127211

The eikonal approach is applied to the evaluation of the cross section for electron capture from an arbitrary nlm shell of a hydrogenic target atom into an arbitrary n'l'm' shell of a fast hydrogenic projectile. Both the impact and wave pictures are employed and their equivalance is discussed. The results are obtained in exact analytical closed form. The approach is also extended here to allow for multi-electron targets, where, as a first approximation, each atomic orbital is specified by three hydrogenic quantum numbers, an effective nuclear charge Z sub T, and an energy eigenvalue in the impact picture, or ionization potential in the wave picture. Because of incomplete information on the many-body target, the Z sub T prime appearing in the eikonal phase factor is left undetermined; nonetheless, analytic expressions are derived for the theoretical cross sections, and numerical values calculated for simple choices of Z sub T prime. Present calculations are compared with the OBK results and the existing experimental data for the capture from H and from the multielectron targets C, Ne, Ar, N2, O2, and He.

BEAM-FOIL STUDIES OF ATOMIC MEAN-LIVES IN THE VACUUM ULTRAVIOLET Ph.D. Thesis
Peter Walden Rathmann 1981 130 p
Avail: Univ. Microfilms Order No. 8126181

The beam-foil method was used to determine mean-lives of excited atomic states. Initial studies were done on states of the helium-and hydrogen-like ions B(IV) and B(V), with the mean-lives determined by fitting the decay curves to sums of exponential terms. Since theoretical values of the mean-lives are very precise in these simple atomic systems, the accuracy of the experimental method is indicated. A series of measurements was made of the low lying 2s 2p states in nitrogen-like Ne(IV), Na(V) Mg(VI), A(VII), and Si(VII). The experimental results were compared to theoretical calculations and showed excellent agreement with nonclosed-shell many electron theory. The lifetimes of the 4P 2p1/2 and 4P 2p3/2 states in copper-like Br (VII) were determined by measuring decay curves for both the primary and cascade decays and then analyzing the curves jointly.

A QUARK MODEL OF THE NONSTRANGE BARYONS Ph.D. Thesis
Charles Patterson Forsyth 1981 142 p
Avail: Univ. Microfilms Order No. 8127350

The masses, elastic widths and photoproduction amplitudes of the S=O resonance with masses less than 2.5 GeV were fit using a quark model with hyperfine interactions. Included in the analysis are all of the states of N=O, 1, 2, and 3 bands. In addition, predictions for the resonance decays to all ground state baryons and mesons were provided. Three models for the decays of these states were examined. It was concluded that the usual spectator model for the decays must be modified. In order to fit the photoproduction data, a third term was added to the minimal electromagnetic Hamiltonian. No positive evidence was found for a tensor force, while conflicting evidence was found for a three body split orbit force. A significant contact force is needed but its strength seems to vary from band to band. Finally, it is concluded that the (56.1-) multiplet is primarily a three quark state, although its mass is lower than expected. Dissert. Abstr.

A THEORETICAL STUDY OF THREE-BODY CORRELATIONS IN ATOMIC FLUIDS Ph.D. Thesis
Robert Neal Sane 1981 51 p
Avail: Univ. Microfilms Order No. 8126927

A theoretical study of triplet correlations in simple classical fluids was made from two distinct approaches. In one approach the first order terms in the h-bond expansion for triplet correlations as given by Abe is accurately evaluated numerically for the Lennard-Jones fluid. Results are obtained for a range of fluid densities and comparisons are made to the accurate data obtained through Monte Carlo computer simulations. These comparisons indicate that the first order term is inadequate near and beyond the triplet point of the system. In the other approach the description of triplet correlations is discussed in terms of fitting computer generated data to a truncated expansion in orthonormal functions. A novel set of functions that are othonormal over a finite triangular domain is introduced. The expansion method is illustrated with an application to the rigid sphere model. This second approach could lead to the best method of describing triplet correlations in simple fluids. Dissert. Abstr.

N82-17990 Colorado State Univ., Fort Collins.
PHOTODISSOCIATION OF METAL-HALIDES: LASERS, ABSORPTION LINESHAPE, AND POLARIZATION OF FLUORESCENCE STUDIES Ph.D. Thesis
Hamid Hemmati 1981 188 p
Avail: Univ. Microfilms Order No. 8126433

An anisotopic velocity distribution of the photoproducts which is observed through the Doppler lineshape of atomic emission, and, a polarization of the emission from the excited photoproducts were observed in atomic T1 photofragments. Five new atomic lasers were obtained in the neutral spectrum of Ga, Pb, Ge, Sn, and Sb on pulsed basis following photodissociation of the corresponding metal halide parent molecules by a 193 nm ArF laser. One of the Ga laser transition terminates on the ground state, while the other laser transitions terminate on the lowest metastable state of the atoms. The atomic fragments are shown to have been produced following multiphoton dissociation of the parent molecule. The degree of polarization of atomic T1, Hg, Pb, and Na photofragments was measured to determine whether a particular magnetic sublevel of the atomic products is populated preferentially following photodissociation of the parent molecules. The degree of polarization of T1 emission at 535 nm was measured to be -0.043 + or - 0.003. Dissert. Abstr.

ELASTIC AND INELASTIC SCATTERING OF 800 MeV/c K+/- MESONS FROM CARBON-12 AND CALCIUM-40 Ph.D. Thesis
Daniel Robert Marlow 1981 445 p
Avail: Univ. Microfilms Order No. 8127354

The four elastic scattering reactions C-12 (K+/-,K+/-) and Ca-40 (K+/-,K+/-), and the four inelastic scattering reactions, C-12 (K+/-,K+/-) to the J(p) = 2+ 4.43 MeV and J(p) = 3-states were studied using the hyper-nuclear spectrometer and the low energy separated beam at the alternating gradient synchrotron. The agreement between the experimental data and the theoretical predictions is reasonable over the angular range of the data, with the exception of Glauber calculations of the K+ elastic scattering. In those cases, the eikonal approximation proves to be a poor approximation. Smaller discrepancies are found in some other cases, indicating the possible need for more sophisticated calculations. Reasonable agreement with the inelastic data is realized only with single impulse calculations, leading to the conclusion that the collective model descriptions of the transition densities are not adequate. The K+ scattering results show particular sensitivity to the details of the transition densities.

NEUTRON SPECTRA PRODUCED BY A FAST PULSE ASSEMBLY IN FREE FIELD AND PERTURBED ENVIRONMENTS Ph.D. Thesis
Thomas Michael Flanders 1980 153 p
Avail: Univ. Microfilms Order No. 8127253

The free field radiation environment produced by the White Sands Missile Range Fast Burst Reactor (FBR) was calculated.

The primary ranges of interest were for positions 7 meters and 170 meters from the FBR. Calculations were also made for penetrations at ranges of 600 meters and 1000 meters. Neutron spectral shapes were also calculated for a perturbed environment produced by iron and iron + aluminum shielding materials. The radiation transport calculations were performed using the ANISN and DOT 3 discrete ordinates codes. Both codes provide solutions to the Boltzmann transport equation by the discrete ordinates method. The DOT 3 two dimensional code required the use of the GRTUNCL auxiliary code to provide a first-collision source. The use of a first-collision source minimizes the ray effect which is associated with 2 dimensional geometry. The calculated spectral shapes, integral fluences, and neutron dose agree well with experimental determinations of the FBR in a free field environment. Dissert. Abstr.

PROBABILISTIC TREATMENT OF RELATIVISTIC SCATTERING OF SCALAR PARTICLES AND THEIR MASS SPECTRUM Ph.D. Thesis
Vigen Ohanian 1980 110 p
Avail: Univ. Microfilms Order No. 8126941

Stuckelberg's manifestly covariant wave equation describing relativistic spin zero particles, the four space formalism (FSF), is assessed through specific physical applications. A machinery for performing scattering calculations were developed. The solutions incorporate the Stuckelberg-Feynman interpretation for particle antiparticle pairs. The probability interpretation for relativistic scattering of scalar particles results. Application to low order Coulomb scattering of Pi(+) mesons is discussed in detail. Calculational and conceptual experiencies of this approach was emphasized. The PSF approach may be used to directly investigate problems involving particles of finite width in an interacting medium. Via the mass representation of the FSF, exact solutions for the mass spectrum of scalar particles in a static uniform electric field perpendicular to a static uniform magnetic field is discussed. Advantages of the FSF operator language, such as the hermiticity in the usual sense of the evolution operator, is emphasized. Dissert. Abstr.

PHOTON ECHO MODULATION IN LaF3:Pr3+ Ph.D. Thesis
Kophu Chiang 1981 120 p
Avail: Univ. Microfilms Order No. 8125263

The photon echo modulation technique was utilized to measure the hyperfine structure and relaxation characteristics of the terminal levels of the 3H4 (3P0(477.7 nm) transition in Praseodymium doped Lanthanum trifluoride (LaF3:P4(3+)). Using two home made nitrogen laser pumped dye lasers modulated photon echoes were observed over a 8 micro sec range of pulse separations. In this range the echoes decay in a simple exponential manner by a factor of 10 to the 5th power and yield a homogeneous linewidth of 70 Khz (FWHM) for a 0.03% LaF3:P(3+) sample. Experiments performed with a less concentrated sample (0.01%) show that the homogeneous linewidth is even narrower, and is about 40 Khz (FWHM). By Fourier transforming the echo modulation data it was possible to determine the hyperfine energy level splittings and their associated linewidths in both the ground (3)H4 and excited (3)P0 states. Dissert. Abstr.

N82-17996 Illinois Univ. at Urbana-Champaign.
EXPERIMENTAL CORRELATION AND SELF CONSISTENT ANALYSIS OF AN IR, FIR, MW TRIPLE RESONANT SYSTEM IN AMMONIA Ph.D. Thesis
William Wei-Long Lee 1981 120 p
Avail: Univ. Microfilms Order No. 8127630

In a triple resonant system of NH3, the interactions between the IR, FIR, and MW were studied by means of density matrix. The FIR and MW frequencies calculated from the self consistent analysis were verified by the experiments. The density matrix equations for the triple resonance were solved in matrix form which provided an inexpensive way for the calculations. The gain curves for the FIR and MW were plotted from the results of the calculations in which the M-degeneracy was included. The curves displayed the linear, Raman, and Hyper-Raman processes between the IR, FIR, and MW. For the Raman process, the IR threshold intensity (10 kW/sq cm) and saturation intensity (500 kW/sq cm) were identified which implied the use of a CO2TEA laser in the experiment. The calculated Raman gain and Hyper-Raman gain as functions of pressures have provided a reasonable interpretation of the measured optimal pressure (3.3 torr) and maximum pressure (10 torr). The self consistent analysis for the FIR and MW frequencies was conducted via a series of calculations for their gain curves. Dissert. Abstr.

N82-17997 Michigan Univ., Ann Arbor.
OPTICAL PROPAGATION THROUGH HORIZONTALLY STRATIFIED, QUASI-SINUSOIDAL, PHASE GRATINGS Ph.D. Thesis
Kim Allen Winick 1981 225 p
Avail: Univ. Microfilms Order No. 8125222

A general theory was developed for determining the reflection and transmission coefficients of holographically produced, horizontally stratified, quasi-sinusoidal, phase gratings as a function of incident angle, wavelength and polarization. Theorems are stated and proved about polarization effects and about the relationship between the spectral and angular characteristics of such gratings. Strong similarities are shown to exist between these gratings and conventional multilayer dielectric stacks. The inverse scattering problem is considered. It is shown that horizontally stratified phase gratings can be used as position-invariant, frequency domain filters in coherent optical systems. An interferometric technique is developed for fabricating horizontally stratified, quasi-sinusoidal, phase gratings. Some simple reflection gratings are fabricated in dichromated gelatin, and their properties are reported. Dissert. Abstr.

MODERATE TEMPERATURE DETECTOR DEVELOPMENT Final Technical Report, Sep. 1979 - May 1980
J. W. Marciniec, R. J. Briggs, and A. K. Sood Dec. 1981 45 p refs
(Contract NAS9-15250)
(NASA-CR-167504; HONEYWELL-8103-26) Avail: NTIS HC A03/MF A01 CSCL 20F

P-side backside reflecting constant, photodiode characterization, and photodiode diffusion and G-R currents were investigated in an effort to develop an 8 m to 12 m infrared quantum detector using mercury cadmium telluride. Anodization, phosphorus implantation, and the graded band gap concept were

approaches considered for backside formation. Variable thickness diodes were fabricated with a back surface anodic oxide to investigate the effect of this surface preparation on the diffusion limited zero bias impedance. A modeling technique was refined to thoroughly model diode characteristics. Values for the surface recombination velocity in the depletion region were obtained. These values were improved by implementing better surface damage removal techniques.

AN INVESTIGATION OF VARIABLE COHERENCE SOURCES AND OF SOME PRACTICAL APPLICATIONS Final Report

Lorenzo M. Narducci and James D. Farina 9 Nov. 1981 31 p refs
(Contract DAAG29-80-K-0001)
(AD-A107715; ARO-17514.1-P) Avail: NTIS HC A03/MF A01 CSCL 20/6

We have investigated, designed and tested a modified form of Mach-Zehnder interferometer for measuring the coherence length of a partially coherent source. The instrument is unique that it allows the recording of a fringe pattern and the extraction of the corresponding visibility curve even for sources with poor spatial coherence by virtue of the instrument's differential magnification. To our knowledge, the idea of magnifying a coherence pattern is new and could have important laboratory applications.

OPTICAL THIN FILM COATINGS

Armen E. Mardiguian and J. H. Fenner Jun. 1981 68 p
(AD-A107808; EOARD-TR-82-1) Avail: NTIS HC A04/MF A01 CSCL 11/3

Results of a survey on optical thin film and substrate technology conducted by the European Office of Aerospace Research and Development are reported. Over thirty university, commercial, and government laboratories were visited in ten Western European nations. Specific subject areas include design, synthesis, and characterization of optical thin films, substrate preparation and testing, and production of equipment for thin film deposition. Summary section indicating the most significant efforts and general state of optical coating research in Europe is included.

BEAM BROADENING IN DENSE SCATTERING MEDIA

J. Langerholc 1981 22 p refs
(MBB-UA-583-81-O) Avail: NTIS HC A02/MF A01

The full 3D integral equation for the spherically symmetric scattering of light in a medium of densely packed uniformly distributed scattering centers is solved for the case of a cylindrically symmetric laser beam (Gaussian profile) directed normally at the slab. The intensity (irradiation) of the scattered light is calculated as a function of the r and z coordinates in the slab, and the distribution of the light scattered out of the slab is studied. After reduction to a two dimensional problem, the discretized integral equation is solved by a standard iteration procedure. The resulting two dimensional distribution is reconverted to 3D to obtain the r and z dependence of the irradiance. From the irradiance distribution the angular distribution of backward and forward scattered light is calculated; special emphasis is placed on the radial dependence of the scattered light emerging normal to the surface. Spot size is defined and calculated for various values of beam radius and material parameters nominally chosen to represent irradiation of translucent biological tissue by a Nd:YAG laser.

DEFINITION OF THE MAROTS REFLECTOR MERIDAN LINE BY INTERPOLATION: APPLICATION TO OPTICAL MEASUREMENTS

M. Bouthier Nov. 1981 21 p Transl. into ENGLISH of "Definition de la Meridienne du Reflecteur de Marots par Interpolation. Application aux mesures Optiques" rept. CNES-78/CT/PRT/SST/SM/105 Toulouse Original report in FRENCH previously announced as N81-30969
(ESA-TT-696; CNES-78/CT/PRT/SST/SM/105) Avail: NTIS HC A02/MF A01

The positioning of the optics, as part of laboratory tests on the MAROTS reflector in order to measure thermoelastic deflections while simulating typical orbital temperature distributions, is described. The experiment revolves around a theodolite located at the axis of the reflector; small mirrors are attached to the reflector. Consequently, positioning depends on the reflector surface being known with sufficient accuracy. As the meridian line is initially defined by 40 points, interpolation of measurement data provides accurate coordinates and slopes at any point. Interpolation by adequate spline functions is shown to give satisfactory results, making it possible to optimize the location of the theodolite and the mirrors for the deflection measurements.

MEASUREMENT OF VISIBLE RADIATION TRANSFER IN WATER UNDER LABORATORY AND FIELD CONDITIONS Technical Report, 1 Oct. 1978 - 30 Sep. 1981

F. P. Incropera Sep. 1981 93 p refs Sponsored by Office of Water Research and Technology
(PB82-108481; PWRRC-TR-140; OWRT-A-058-IND(2)) Avail: NTIS HC A05/MF A01 CSCL 06C

Solar radiation transfer in a body of water strongly influences thermal conditions and the growth of photosynthetic organisms. The development of methods for accurately predicting this transfer is investigated. The optical properties of natural waters and the distribution of radiation of water samples under laboratory conditions were measured. The results were compared with predictions. The distribution of radiation under field conditions were also measured. A complete set of optical property measurements were obtained from samples of water from the Wabash River.

STUDIES OF RUNAWAY ELECTRON TRANSPOT IN PLT AND PDX Ph.D. Thesis

Cris William Barnes 1981 190 p
Avail: Univ. Microfilms Order No. 8127747

The physical mechanisms responsible for anomalous electron heat transport were examined. The confinement time of the runaway electrons was measured by a variety of experiments on the Princeton Large Torus (PLT) and the Poloidal Divertor Experiment (PDX). Measurements made in different energy ranges show the confinement time being 2-6 msecs between 0.4-1.0 MeV (10-30 percent of the thermal confinement time), and increasing to 50-100 msecs or greater between 8-22 MeV. The confinement time increases with bulk plasma density, and with toroidal field at low densities. Experiments include determination of the electron spectrum from the amount of photonuclear activation of a stainless steel limiter, and of the runaway electron scrape-off thickness measured from the angular distribution of that activation. The ratio of electrodisintegration to photon-neutron production, and the time dependence of those emissions, are related to transport coefficients.

FUNCTIONAL INTEGRAL APPROACH TO CLASSICAL STATISTICAL DYNAMICS Ph.D. Thesis

Roderick Von Jensen 1981 129 p
Avail: Univ. Microfilms Order No. 8127749

The functional integral method for the statistical solution of stochastic differential equations is extended to a broad, new class of nonlinear dynamical equations with random coefficients and initial conditions. This work encompasses previous results for classical systems with random forces and initial conditions with arbitrary statistics, and provides results for systems with nonlinear interactions which are nonlocal in time. Closed equations of motion for the correlation and response functions were derived which have applications in the calculation of particle motion in stochastic magnetic fields and in the description of electromagnetic plasma turbulence. As an illustration of the results for nonlocal interactions and non-Gaussian initial conditions, the electromagnetic dispersion tensor was calculated to first order in renormalized perturbation theory. Dissert. Abstr.

THE DYNAMICS OF MICROPROCESSES AND CURRENT TURBULENT HEATING OF IONS IN URAGAN-2 STELLARATOR

N. F. Perepelkin (Ukrainian Academy of Sciences, Kharkov), V. A. Suprunenko, A. S. Slavny, M. P. Vasilev, A. G. Dikii, V. D. Kotsubanov, B. V. Kravchin, and A. E. Kulaga Oct. 1981 41 p refs
(IPPJ-548) Avail: NTIS HC A03/MF A01

Noise spectra and UHF radiations within a wide range of electron cyclotron, electron plasma and ion plasma frequencies were investigated in 'Uragan-2' stellarator. Threshold dependences on electrical and magnetic fields of kinetic instability excitations were studied as well as of ion heating and disruption of quasi-stationary run away of electrons in a plasma heated by a powerful current pulse in high magnetic fields. Near omega sub ce/omega sub pe approximately = 1, the threshold character of growth of hot ion number and energy, as well as of the excitation of epithermal nonstationary electromagnetic radiations on Langmuir frequency and ion plasma frequency harmonics were connected with the ion acoustic turbulence and the processes of nonlinear sound transformation. These effects are increased with the rise of magnetic field strength and are followed by the drop of a resistance absolute value. At the rise of electrical field strength no restrictions in injection of high ohmic power into a plasma and ion temperature rise were observed. The results of ion heating in Tokamaks were compared. NEW EXCITATION AND IONIZATION MECHANISM OF IONS IN DENSE PLASMAS: THE ROLE OF AUTOIONIZING STATES

Takashi Fujimoto and Takako Kato Oct. 1981 15 p refs
(IPPJ-549) Avail: NTIS HC A02/MF A01

It is shown that, in dense plasmas, dielectronic capture into doubly excited ionic states followed by the ladder like excitation ionization chain becomes important in the excitation ionization process of ions. For an example of a hydrogen like ion, its contribution to the excitation ls yields 2s, 2p as well as to the ionization was evaluated by the method of the quasisteady state solution to the rate equations. The increase is found to be substantial, i.e., by more than a factor of two both for the excitation and ionization rate coefficients. Author

FIRST-ORDER TOROIDAL CORRECTION TO THE MINIMUM ENERGY STATE OF A CYLINDRICAL PLASMA COLUMN OF FINITE BETA

W. Schuurman and J. W. Edenstrasser (Innsbruck Univ.) Aug. 1981 19 p refs Sponsored by Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek and Euratom
(Grant S-18/03)
(Rept-81-133) Avail: NTIS HC A02/MF A01

An inverse aspect ratio expansion was used to formulate a first-order toroidal correction to the minimum energy equilibrium state of a cylindrical plasma column of finite beta, embedded in a vacuum region. The use of this correction improves the comparison between the theoretical model, set up for a rotationally symmetric straight cylinder, and the toroidal pinch experiments. The comparison demands the numerical evaluation of an integral with an apparent singularity at the plasma axis, and matching of four parameters to approprimate boundary conditions. A.R.H.

GRAPHS OF ANOMALOUS ENERGY CONFINEMENT TIMES FOR ASDEX, INTOR, JET, PLT, TFTR AND ZEPHYR

H. K. Wimmel Jul. 1980 55 p refs
(IPP-6/200) Avail: NTIS HC A04/MF A01

Anomalous transport due to the dissipative trapped-ion instability, anomalous heat conductivity of electrons, and neoclassical heat conductivity of ions are considered. The energy confinement time resulting from the combined effects is represented graphically as a function of the mean temperature and for several values of the mean density for the following Tokamaks: ASDEX, INTOR, JET, PLT, TFTR, and ZEPHYR. Author

N82-18013# Max-Planck-Institut fuer Plasmaphysik, Garching (West Germany).

MODEL CALCULATIONS OF THE TEARING INSTABILITY ASSOCIATED WITH AC-MODULATION OF THE PLASMA-CURRENT IN TOKAMAKS

F. Pohl, S. vonGoeler, W. Engelhardt, K. Lackner, and M. Murmann Jun. 1980 63 p refs
(IPP-6/198; IPP-III/60) Avail: NTIS HC A04/MF A01

An experiment was performed on the pulsator Tokamak at Garching in which an ac component was superposed on the plasma current. To interpret and plan these experiments, a computer program was developed to calculate the current distributions accompanying the ac modulation taking into account the skin effect. The experiments show that ac modulation of high amplitude impairs the plasma stability and can lead to disruption. Since tearing modes are believed to be responsible for the disruptive instability, calculations on the stability of these modes were performed. The computer program and its results are described. The skin effect, the stability of tearing modes, and the heating effects associated with ac modulation are discussed. Computer program documentation is included. A.R.H.

STABILIZATION OF THE LOWER HYBRID DRIFT INSTABILITY BY RESONANT ELECTRONS

Yu-Jiuan Chen, William M. Nevins (California Univ., Livermore), and Charles K. Birdsall 16 Sep. 1981 30 p refs
(Contracts N00014-77-C-0578; W-7405-eng-48)
(AD-A107652; UCB/ERL-M81/72) Avail: NTIS

HC A03/MF A01 CSCL 20/9

The lower hybrid drift instability was studied with a two dimensional electrostatic simulation code. Simulations showed good agreement of the measured local growth rates and frequencies with the results of local theory during the early stage of wave growth. At later times nonlocal effects become important, and a coherent mode structure develops. This normal mode was observed to propagate up the density gradient. At zero plasma beta and zero electron temperature, we found that the lower hybrid drift instability is stabilized by the local current relaxation due to both ion quasilinear diffusion and electron E x B trapping which causes electron heating to occur. ROTATIONAL INSTABILITIES IN THE FIELD-REVERSED THETA PINCH: RESULTS OF HYBRID SIMULATIONS

Douglas S. Harned 14 Sep. 1981 36 p refs
(Contract N00014-77-C-0578)
(AD-A107651; UCB/ERL-M81/70) Avail: NTIS
HC A03/MF A01 CSCL 20/9

Rotational instabilities in rigidly rotating field-reserved theta pinch equilibria are studied using a quasineutral hybrid simulation code. We observe unstable m = 2 modes at levels of ion rotation below instability thresholds predicted by finite Larmor radius fluid theory. Nonlinear effects are found to reduce the growth rate and lower the real frequency of the m = 2 mode at large amplitude. Instabilities with m > 2 have been observed for some strongly reversed cases. It is also found that growth rates for these instabilities can be greatly reduced by increasing the ratio of the plasma radius to the ion Larmor radius. Author (GRA)

STEADY-STATE PLANAR ABLATIVE FLOW Interim Report

W. M. Manheimer, D. G. Colombant, and J. H. Gardner 18 Nov. 1981 32 p refs
(Contract DE-AI08-79DP-40092)
(AD-A107601; NRL-MR-4644) Avail: NTIS
HC A03/MF A01 CSCL 20/9

Steady state planar ablative flow in a laser produced plasma is studied. Our calculations relate all steady state fluid quantities to only three parameters, the material, absorbed irradiance and laser wavelength. The fluid is broken into three regions; the subcritical expanding plasma, the steady state ablation front and the accelerated slab. Boundary conditions at the interfaces of these regions are given. If the absorbed irradiance is nonuniform, the nonuniformity in ablation pressure is calculated. Results are compared with experiment and fluid simulation for both uniform and nonuniform illumination. RESISTIVE INTERCHANGE MODES IN REVERSED FIELD PINCHES Interim Report

John M. Finn (Science Applications, Inc., McLean, Va.) and Wallace M. Manheimer 24 Nov. 1981 21 p refs
(Contract EX-76-A-34-1006)
(AD-A108129; NRL-MR-4520) Avail: NTIS
HC A02/MF A01 CSCL 02/9

A new regime is found in which the growth rate of the resistive interchange mode in cylindrical geometry is considerably smaller than previously believed. This stabilization is due to coupling to the external, tearing stable, region. Considering the crossover point from the conventional resistive interchange to the new regime as a critical beta, beta sub c, we find beta sub c about 7% for classical resistivity with T sub e = 10 eV, in agreement with recent numerical studies. However, beta sub c scales as T sub e to the -3/5th power, giving beta sub c about 1% for T sub e = 1 keV. Marginally stable pressure profiles for totally localized modes in the Bessel function model for a reversed field pinch are also computed, and show that the central pressure may be up to 400 times the pressure at the wall. ON THE RELATION BETWEEN PLASMA AND NEUTRAL GAS PROFILES IN A COLD GAS BLANKET SYSTEM Research and Training Programme on Controlled Thermonuclear Fusion and Plasma Physics (EUR-NE)

M. Bures 27 Sep. 1981 19 p refs Sponsored by EURATOM
(TRITA-PFU-81-03; ISSN-0348-7644) Avail: NTIS
HC A02/MF A01

A solution for the neutral density profile using measured plasma density and temperature gradients is presented. The fluid model is used. The method indicates that the penetration length for neutrals is underestimated when integrated profiles are used. The ionization rate need not be inferred in the present calculation, because the ionization of neutrals diffusing into the plasma is implicitly included in measured profiles. This calculation is advantageous in the low temperature range where the ionization rate is a strongly varying function of temperature. Results show that the temperature gradient plays the essential role in the determination of the neutral density profile. Author (ESA)

N82-18022# Stuttgart Univ. (West Germany). Inst. fuer Plasmaforschung.

MICROINSTABILITIES IN A RADIALLY CONTRACTING INHOMOGENEOUS CYLINDRICAL PLASMA SLAB. PART 2: LOWER HYBRID AND ELECTRON CYCLOTRON DRIFT INSTABILITIES IN THE PLASMA FOCUS

R. Deutsch and H. J. Kaeppeler Dec. 1980 86 p refs
(IPF-80-13-Pt-2) Avail: NTIS HC A05/MF A01

The frequency, growth rate, turbulent electron and ion heating rates, and the effective collision frequency are calculated for both instabilities in parameter ranges associated with the late compression phase of the plasma focus. Simple analytical formulas were deduced for these parameters. Results indicate a regime in which the lower hybrid drift induced turbulence can heat the electrons up to a few keV within 10nsec. This result agrees with experimental observations. Author (ESA)

EXPERIMENTAL INVESTIGATION OF THE INFLUENCE OF HIGH VOLTAGES ON THE PERFORMANCE OF A PLASMA FOCUS Ph.D. Thesis [EXPERIMENTELLE UNTERSUCHUNG DES EINFLUSSES HOHER SPANNUNGEN AUF EINEN PLASMAFOKUS]

Tilman Oppenlaender Jan. 1981 82 p refs In GERMAN
(IPF-81-2) Avail: NTIS HC A05/MF A01

The influence of the application of high voltages for plasma current optimization at constant stored energy on the discharge evolution and the formation of a plasma focus was investigated. Such a current optimization is indicated by the known scaling of neutron yield with plasma current. The plasma diagnostics are described: holographic interferometry for electron density; soft X-ray, using the filter method for electron temperature; silver activation counters for neutron yield; time of flight techniques for neutron energy spectra; and magnetic and electric probes for macroscopic electrical parameters. Results show the expected neutron production scaling with current and typical yields of 10 to the tenth neutrons at 28kJ, 60kV operation. The electron density is about 50% and the production of energetic deuterons about 10 times higher than in other experiments with comparable energies. Neutrons with energy in excess of 5MeV were observed. Author (ESA)

N82-18024# Stuttgart Univ. (West Germany). Inst. fuer Plasmaforschung.

MEASUREMENT OF HEAVY ION COMPONENTS IN A HYDROGEN PLASMA BY CO2 LASER SCATTERING WITH COHERENT DETECTION

W. Kasparek and E. Holzhauer Feb. 1981 15 p refs
(IPF-81-5) Avail: NTIS HC A02/MF A01

Ion temperatures and composition were determined in a hydrogen plasma with argon, nitrogen and helium additives. A CO2 hybrid laser beam is focussed into the plasma and the detected spectrum is transformed from IR to RF. After amplification the spectral resolution is obtained from a set of band filters of 20 MHz bandwidth. The mixing term (the high frequency part of the spectrum) is proportional to scattered signal amplitude, which is characteristic for a coherent receiver. In order to obtain the power spectrum the signal is squared, rectified and photographed. Measured spectra agree well with theory. Author (ESA)

N82-18025# Paris-Sud Univ., Orsay (France). Lab. de Physique des Gaz et des Plasmas.

SPECTROSCOPY OF MOLECULAR PLASMAS AND KINETICS OF EXCITED STATES [SPECTROSCOPIE DES PLASMAS MOLECULAIRES ET CINETIQUES DES ETATS EXCITES]

A. Ricard Mar. 1981 148 p refs In FRENCH
(LP-187) Avail: NTIS HC A07/MF A01

Excited states (radiative and metastable) in a nonequilibrium plasma are defined. Reactions are classified for metastable atoms and selective transfer. Spectroscopy of diatomic molecular emission, applied to the radicals NO, NH, and SiH excited in discharges in mixtures of N2 + O2, N2 + H2, R + O2, R + NH3, etc., where R is a rare gas (Ar), is discussed. It is shown how plasma temperature can be deduced. Measurement methods by optical absorption that are applicable to rare gas metastables and radicals are presented. The use of tunable lasers considerably improves the accuracy of optical absorption measurement. Applications of transfers between excited states in laser physics and in plasma physicochemistry are illustrated. Author (ESA)

QUANTUM CORRECTIONS TO THE PROPERTIES OF DENSE PLASMAS [CORRECTIONS QUANTIQUES AUX PROPRIETES DES PLASMAS DENSES]

M. M. Gombert May 1981 259 p refs Partly in FRENCH and ENGLISH
(LP-189) Avail: NTIS HC A12/MF A01

Quantum corrections are considered for the thermodynamic properties of dense plasmas such as found at the center of the Sun or those created by inertial compression fusion. The pseudopotential between two charged particles is discussed. The single component plasma model as well as multicomponent models are treated in terms of perturbation developments in functions of different small parameters, i.e., the plasma parameter, the measure of the quantum diffraction effect, and electron exchange effects. The problem of iron demixing at the center of the Sun is addressed; results show no iron demixing. The effect of quantum corrections on the static thermal microfield in a plasma is also studied as well as Bohm diffusion. Author (ESA)

N82-18027# Paris-Sud Univ., Orsay (France). Lab. de Physique des Gaz et des Plasmas.

MICROWAVE DISCHARGES

J. Marec, E. Bloyet, M. Chaker, P. Leprince, and P. Nghiem Oct. 1981 66 p refs Presented at Lecture on Electrical Breakdown and Gas Discharges, Les Arcs, France, Jul. 1981
(LP-192) Avail: NTIS HC A04/MF A01

The breakdown conditions of microwave discharges and the difficulties of obtaining them theoretically are reviewed. Classic experimental results are interpreted by the diffusion theory, whose limits and physical meaning are studied. Steady state discharges are described. Plasma columns sustained by a traveling surface wave are discussed. Applications of microwave discharges are outlined, e.g., for spectroscopy studies, in lasers, as ion sources, the stimulation of combustion in order to accelerate burning of lean air-fuel mixtures in internal combustion engines, and in plasma chemistry for the preparation of hydrogenated amorphous silane. Being electrodeless, microwave discharges minimize pollution. Author (ESA)

ELECTRON TEMPERATURE EVOLUTION AND MACROSCOPIC SIZE OF A VACUUM SPARK DISCHARGE PLASMA Ph.D. Thesis

Robert Edward OConnor 1981 142 p
Avail: Univ. Microfilms Order No. 8127297

The temporal development of the electron temperature of the point plasma formed in a vacuum spark discharge (VSD) is determined at capacitor bank voltages ranging from 6 to 18 kV. The measurement is based on an X-ray absorption technique utilizing three foils (Cr, Mn, and Fe). Bremsstrahlung, radiative recombination, and line radiation are calculated for a coronal equilibrium plasma model. Experimentally obtained ratios of the detector foil combinations over the time profile of the X-ray signals are compared with the theoretically obtained ratios to determine the temporal development of the electron temperature. A peak electron temperature of 2.6 keV was found. The bulk, or macroscopic, plasma formed in the VSD is studied with respect to its physical size, electron temperature, and electron density. Dissert. Abstr.

MAGNETIC CIRCULAR DICHROISM AND FARADAY ROTATION OF CESIUM-ARGON EXCIMERS AND CESIUM

DIMERS Ph.D. Thesis

Muhammad Azadul Islam 1981 81 p

Avail: Univ. Microfilms Order No. 8125310

Direct information about the angular momentum quantum numbers and the angular momentum coupling scheme of excimer molecules was obtained in an experiment in which the MCD and the FR of cesium-argon excimer and cesium dimer absorption bands between 5000 A and 10,000 A were measured for the range of temperature from 116 C to 355 C. The measured MCD data at the blue wing of D2 line clearly shows that the assignment of sigma 2/2 to this excited state, assuming Hund's case (b), is a poor approximation. By a simple inspection of the MCD data it is found that the coupling scheme is more nearly Hund's case (c) than Hund's case (b). The blue wing associated with 5D transition in atomic cesium is devoid of MCD and exhibits strong MCD in the red wings. The yellow-green band associated with 7s-6s transition in atomic cesium shows no MCD.

Avail: Univ. Microfilms Order No. 8126234

A quantum beat signal was observed in the total photoionization current from the Zeeman levels of the 3 super 2 P sub 3/2 state. Atoms in a thermal beam were excited to the 3P state by a resonant light pulse, allowed to evolve for about 36 nsec in an applied magnetic field, and then photoionized by a second, optically delayed light pulse. Two dye lasers pumped by the same N2 laser provided the stepwise excitation at 5890A and ionization at about 4060A. Quantum beats from the 3P state's Zeeman structure were observed in the photocurrent as the field was swept from -35 to +35 Gauss. It also has application to increasing the sensitivity of level crossing and quantum beat spectroscopy.

ELECTRONIC EXCITATION OF HELIUM AND KRYPTON BY ELECTRON IMPACT Ph.D. Thesis

Julia Mae Phillips 1981 151 p

Avail: Univ. Microfilms Order No. 8125693

A crossed beam electron impact spectrometer is modified to enable the study of near threshold electronic excitation of He and Kr by electron impact. Absolute differential cross sections for excitation of the individual n = 2 states of He and 3p55s states of Kr are measured within the first four electron volts of threshold. In He pronounced angle dependent structures are apparent in the threshold excitation of the 2p3 state and in the near threshold excitation of the 2S3 state. These experimental observations suggest the existence of a new 2P resonance near 20.8 eV. The results on Kr demonstrate that the angular momentum of the Kr(-) ion core 4p5 has a strong influence on the excitation cross sections, both on the relative magnitudes of the cross sections and on the relative strengths of resonant structures in the excitation functions. The angular momentum of the entire electron cloud of an excited state has less of an effect on the cross sections.

DEFECT STRUCTURE IN THE ALKALI-GALLATE FAST ION CONDUCTORS Ph.D. Thesis

Michael Paul Anderson 1981 256 p

Avail: Univ. Microfilms Order No. 8125237

For crystals prepared from K2O-Ga2O3 starting materials, the defect responsible for nonstoichiometry is a complex Frenkel defect, which introduces both interstitial oxygen and interstitial potassium into the crystals. For crystals prepared from Na2O- Ga2O3 starting materials, two complementary defect processes occur. The first is the Frenkel defect observed in K beta gallate. The second is the substitutional replacement of Ga(+3) by Na(+) in tetrahedral sites. It is shown that 'self-doping' by Na(+) is responsible for the stabilization of Na beta' gallate. The physical origin of nonstoichiometry is discussed in terms of Pauling's electrostatic valence principle. Models for short range correlations in the crystals are presented. The mixed ion effect was also analyzed. It has been shown that the anomalous drop in conductivity is accompanied by the partioning of mixed ion carriers into different sites.

ENERGY BANDS AND SUPERLATTICE FORMATION IN TITANIUM DISELENIDE Ph.D. Thesis

Bancherd DeLong 1981 120 p

Avail: Univ. Microfilms Order No. 8127579

The superlattice formation in TiSe2 is related to a soft phonon mode near the zone boundary. This mode is supported by a coupling of the electrons at L and the holes at gamma, which causes an anomalously large electronic susceptibility. When the transition occurs, a large portion of the Fermi surface gaps, new electronic states and energy bands are formed, resulting in the lowering of the electronic energy. The 2a x 3a superlattice was directly observed by electron diffraction in dilute Zr-doped TiSe2 crystals. The powerful technique of angle-resolved photoemission spectroscopy has been extended to low temperature. Changes in the energy band structure of TiSe2 due to superlattice formation were observed for the first time.

GAUGE-DEPENDENT CRITICAL PROPERTIES OF THE NEMATIC TO SMECTIC-A PHASE TRANSITION IN LIQUID CRYSTALS IN THE 1/N EXPANSION Ph.D. Thesis

Stuart Gordon Dunn 1981 134 p

Avail: Univ. Microfilms Order No. 8127018

A generalized de Gennes model for the nematic to smectic-A transition with a N complex component order parameter, Psi, is studied in the 1/N-expansion. A continuum of gauges parameterized by an angle Theta with Theta = 0 (Theta = Pi/2) corresponding to the physical (LC) and SC gauges is introduced. Isotropic and anisotropic critical behavior is found as the Epsilon expansion. The susceptibility Chi sub LC in the LC gauge is related to that Chi sub SC, in the SC gauge via Chi sub LC = Chi sub SC to the exp(g) power, where g is negative and more than logarithmically singular in reduced temperature t and wave number q near criticality, because the splay elastic constant K sub 1 to the 0 behaves as a dangerous irrelevant variable.

OPTICAL CHARACTERIZATION OF THIN METALLIC AND SEMICONDUCTING FILMS IN THE FAR INFRARED Ph.D. Thesis

Mark Stuart Durschlag 1981 119 p

Avail: Univ. Microfilms Order No. 8127582

The performance in a CW optically pumped air infrared (fir) laser of a hybrid metal mesh-dielectric mirror consisting of an assembly of thin metallic and semiconducting films is evaluated. Its construction is described and an overview of theoretical approaches predicting its optical properties is outlined. From the general model which best agrees with the experimentally determined transmission a simplified model is derived and shown to maintain sufficient accuracy to warrent its further utilization. Ultra-thin semiconducting heterostructures are also examined using fir techniques. In particular, it is shown that by fitting a calculated reflectivity based on a simple classical model to the fir reflectivity obtained experimentally, both electrical (free carrier concentration, mobility) and lattice (polar phonon frequencies) parameters can be obtained with reasonable accuracy.

MOSSBAUER STUDIES ON PARTIALLY ORIENTED

SAMPLES OF CARBON MONOXYMYOGLOBIN AND PHOTODISSOCIATED CARBON MONOXYMYOGLOBIN Ph.D. Thesis

Richard Maury Emberson, Jr. 1981 149 p
Avail: Univ. Microfilms Order No. 8127586

Iron-57 studies on partially oriented samples of carbon monoxymyoglobin (MbCO) and photodissociated carbon monoxymyoglobin (Mb*CO) are reported. The spectrum of each Mb species consists of a doublet which is the result of the quadrupole interaction with the electric field gradient (EFG) at the Fe-57 nucleus. The photo-produced partial orientation affects the intensity ratio R of the two lines; measurements of R versus the fraction MbCO remaining allows the determination of the asymmetry parameter eta of the EFG and the angle psi between its principal axis and the normal to the optical axis, which coincides with the heme normal. The feasibility was demonstrated of such an experiment by measuring eta and psi for MbCO and Mb*CO. Dissert. Abstr.

N82-18039 Brandeis Univ., Waltham, Mass.

THE FERMI SURFACE RECONSTRUCTED MOMENTUM DENSITY OF V3SI FROM POSITRON ANNIHILATION EXPERIMENTS Ph.D. Thesis

William Sidney Farmer 1981 258 p
Avail: Univ. Microfilms Order No. 8126873

The angular correlation of annihilation radiation (ACAR) technique was used to provide information about the electron positron momentum density via point slit distributions. Each two dimensional distribution corresponds to an integral of the three dimensional momentum density. Two dimensional point slit distributions were measured for seven V3Si crystal orientation using 64 detector ACAR apparatus. A circular averaging technique extracted the small oscillations from the nearly Gaussian ACAR distributions and displayed them clearly. A reconstruction algorithm computed the three dimensional momentum density from six of the ACAR distributions. Model densities were produced from some recent A15 APW band calculations and are compared to the reduced reconstructed ACAR result. Dissert. Abstr.

SURFACE ANALYSIS APPLIED TO THIN FILMS OF MOLECULAR SOLIDS Ph.D. Thesis

Robert Edgar Davis 1981 149 p
Avail: Univ. Microfilms Order No. 8127577

Auger depth profiling was established as a reliable technique for determining the elemental composition in depth of phthalocyanine/phthalocyanine (Pc/Pc) and Pc/metal interfaces initially. The mechanisms which can lead to physical and chemical degradation of these interfaces with time were also examined. A variety of techniques were relied upon to study the chemical degradation of FePc which took place during annealing in air. The question of a molecular sputtering mechanism is addressed. Using the results obtained from these AES studies, the technique of SIMS was evaluated for the analysis in depth of molecular solids. The method has advantages which allow the identification of silver on the surface of unannealed Pc/Ag/glass assemblies. The presence of silver was not detectable by AES due to spectral overlap, and had not been anticipated by previous researchers. Some preliminary results with polymer film assemblies were presented. Dissert. Abstr.

HARMONIC AND ANHARMONIC PROPERTIES OF DIAMOND STRUCTURE CRYSTALS WITH APPLICATION TO THE CALCULATION OF THE THERMAL EXPANSION OF SILICON Ph.D. Thesis. Final Report

Keith Herbert Wanser Dec. 1981 288 p refs
(Grant NsG-7472)
(NASA-CR-168437) Avail: NTIS HC A13/MF A01 CSCL 20L

Silicon has interesting harmonic and anharmonic properties such as the low lying transverse acoustic modes at the X and L points of the Brillouin zone, negative Gruneisen parameters, negative thermal expansion and anomalous acoustic attenuation. In an attempt to understand these properties, a lattice dynamical model employing long range, nonlocal, dipole-dipole interactions was developed. Analytic expression for the Gruneisen parameters of several modes are presented. These expressions explain how the negative Gruneisen parameters arise. This model is applied to the calculation of the thermal expansion of silicon from 5K to 1700K. The thermoelastic contribution to the acoustic attenuation of silicon is computed from 1 to 300 K. Strong attenuation anomalies associated with negative thermal expansion are found in the vicinity of 17K and 125K. S.L.

A MODEL FOR ELECTRONS EXISTING IN HYBRIDIZED NARROW AND WIDE BANDS

R. Kishore Jun. 1981 21 p refs Presented at the 33rd Ann. Meeting of SBPC., Salvador, Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2127-RPE/351) Avail: NTIS HC A02/MF A01

A model is proposed for electrons existing in hybridized narrow and wide bands which occur in the transition metals, the mixed valence systems of rare earth metals and their compounds, and the doped semiconductors. The model is derived from the standard basis operator (SBO) form of the extended Anderson model, originally proposed for the dilute magnetic alloys. Equations of motion method was used to obtain the SBO's Green's functions, and thereby the spectrum of the quasi-particle excitations. For the translationally invariant systems, the possiblity of the nonmetallic behavior and the metal-nonmetal transition for the nonintegral number of electrons per lattice site is described. B.W.

CRYSTAL GROWTH FROM THE VAPOR PHASE EXPERIMENT MA-085, SECTION 7 Final Report

H. Wiedemeier, H. Sadeek, F. C. Klaessig, M. Norek, and R. Santandrea [1982] 40 p refs
(Contract NAS8-30578)
(NASA-CR-161965) Avail: NTIS HC A03/MF A01 CSCL 20B

The positive effects of microgravity on crystal quality and the fundamental properties of the vapor transport reaction were established by analyzing the results of three transport experiments on multicomponent systems performed during the Apollo-Soyuz Test Project mission. The systems employed were GeSe0.99Te0.01 - GeI4, GeS0.98Se0.02 - GeCl4, and GeS-GeCl4-Ar. The crystallographic analysis is based on a direct comparison of space and ground-based (prototype) crystals employing X-ray diffraction, microprobe, microscopic, and chemical etching techniques. The results demonstrate a considerable improvement of the space-grown crystals in terms of chemical and crystalline homogeneity, surface morphology, and bulk perfection relative to ground specimens. The confirmation of greater mass transport rates than predicted for microgravity by present vapor transport models is of basic scientific and practical importance for the improvement of transport models and techniques on Earth and for the development of a transport model for space conditions. R.J.F.

QUANTITATIVE DETERMINATION OF ZERO-GRAVITY EFFECTS ON ELECTRONIC MATERIALS PROCESSING GERMANIUM CRYSTAL GROWTH WITH SIMULTANEOUS INTERFACE DEMARCATION EXPERIMENT MA-060, SECTION 5 Final Report

H. C. Gatos, A. F. Witt, M. Lichtensteiger, and C. J. Herman [1982] 65 p refs
(Contract NAS8-30576)
(NASA-CR-161964) Avail: NTIS HC A04/MF A01 CSCL 20B

The crystal growth and segregation characteristics of a melt in a directional solidification configuration under near zero g conditions were investigated. The germanium (doped with gallium) system was selected because it was extensively studied on Earth and because it lends itself to a very detailed macroscopic and microscopic characterization. An extensive study was performed of the germanium crystals grown during the Apollo-Soyuz Test Project mission. It was found that single crystal growth was achieved and that the interface demarcation functioned successfully. On the basis of the results obtained to date, there is no indication that convection driven by thermal or surface tension gradients was present in the melt. The gallium segregation, in the absence of gravity, was found to be fundamentally different in its initial and its subsequent stages from that of the ground based tests. None of the existing theoretical models for growth and segregation can account for the observed segregation behavior in the absence of gravity. B.W.

(AD-A107686; ERC41004.11FR; AFOSR-81-0721TR) Avail: NTIS HC A04/MF A01 CSCL 20/2

The crystal chemical approach has been shown to be successful in improving the temperature stability of ferroelectric LiNbO3 phase. LiNbO3 films doped with cations that are larger than Li+ and Nb5+, e.g., Na+, Na+ + Ta5+, Ag+, Co2+ + Zr4+, etc., have successfully been grown by the liquid phase epitaxial (LPE) technique using the vanadium containing flux systems. X-ray diffraction studies indicate that the films grown from the vanadium containing fluxes have a high single crystallinity with good epitaxy. To date, the temperature coefficient of SAW velocity was reduced by 40%; this translates into 40% improvement in the temperature stability of LiNbO3 SAW devices. This is a significant result in the present work and opens a new interest in the LiNbO3 family for SAW application. By using such a novel approach, it should be possible to improve the temperature stability of other important structural families such as quartz or tungsten bronze structural family compositions GRA

ELECTRONIC STRUCTURE OF GRAIN BOUNDARIES AND INTERFACES IN POLYCRYSTALLINE ZINC OXIDE
M. H. Sukkar, H. L. Tuller, and K. H. Johnson 18 Nov. 1981 9 p refs
(Contract N00014-81-K-0299; NR Proj. 056-757)
(AD-A107864; TR-2) Avail: NTIS HC A02/MF A01 CSCL 20/2

Preliminary theoretical models for the electronic structure of grain boundaries and interfaces in polycrystalline ZnO have been constructed on the basis of self-consistent-field-X-alpha scattered-wave (SCF-X alpha-SW) cluster molecular-orbital calculations. The disposition and character of the interface states, relative to the valence and conduction bands of the otherwise perfect crystalline material, have been studied for clusters representing coordinatively unsaturated Zn surface sites and molecular O2 chemisorption thereon. The possible effects of the resulting interface states on electron transport at grain boundaries in ZnO varistors have been addressed. GRA

We are using a number of experimental techniques to investigate the various as grown and radiation-induced defects in commercially available high-quality synthetic quartz. Interstitial ions such as H(+), Li(+), and Na(+) as well as radiation-induced holes trapped at oxygen ions act as charge compensator's located adjacent to the aluminum and this gives rise to Al-OH(-), Al-Li(+), Al-Na(+), and Al-hole centers. Absolute concentrations of these compensated aluminum centers have been determined as a function of irradiation and annealing temperature for a variety of samples, both swept and unswept. The various treatments simply exchange one type of compensator for another at the aluminum sites and, within experimental error, the sum of the aluminum centers remains constant for a given sample. This direct accountability of all the aluminum ions in hydrogen-swept samples strongly suggests that the 1/3306 cm and 1/3367 cm infrared bands are associated with the Al-OH(-) center. Also, the ESR and IR results show that the aluminum content of randomly selected bars of high-quality quartz can vary by an order of magnitude. Acoustic loss measurements on a 5 MHz 5th overtone resonator blank show no loss peaks that can be attributed to the Al-Li(+) center. A series of oxygen-vacancy-associated centers have been discovered by ESR. An investigation of the thermally stimulated luminescence, TSL, from quartz irradiated at 95 K has been made below room temperature. GRA

POLARIZATION MECHANISMS IN PHASE 2 POLY (VINYLIDENE FLUORIDE) FILMS Interim Technical Report
B. A. Newman, J. I. Scheinbeim, C. H. Yoon, and K. D. Pae 12 Nov. 1981 46 p refs
(Contract N00014-75-C-0540; NR Proj. 356-564)
(AD-A107850; TR-24) Avail: NTIS HC A03/MF A01 CSCL 07/4

Unoriented phase 2 films were poled with fields up to 3.2 MV/cm at room temperature. A determination of the piezoelectric strain coefficent provided a measure of the residual polarization achieved, while an X-ray diffraction study provided information about field-induced phase changes which appeared to be related directly to the residual polarization. In an unoriented film, crystals make all possible orientation with respect to the poling field and different polarization mechanisms appear to depend on the crystal orientation. A number of different polarization mechanisms are discussed. A new crystal form for Poly(Vinylidene Fluoride) (PVF2) was observed. Author (GRA)

SPECTRAL DIFFUSION IN ORIENTATIONALLY DISORDERED ORGANIC SOLIDS Interim Technical Report
Paras N. Prasad (New York State Univ. at Buffalo), Jack R. Morgan, and Mostafa A. El-Sayed 20 Nov. 1981 16 p refs
Submitted for publication
(Contract N00014-75-C-0602; NR Proj. 056-498)
(AD-A107950; TR-39) Avail: NTIS HC A02/MF A01 CSCL 20/2

The spectral diffusion within the inhomogeneous linewidth of the T1 from S0 transition is presented for an orientationally disordered organic solid under the condition when kT (approximately 3/cm) is much smaller than the inhomogeneous linewidth (approximately 83/cm). The rate of the transfer is found to increase as the site energy increases. This result is explained in terms of a phonon assisted undirectional (high to low) energy transfer process in which the increasing density of the low energy sites (acceptors) with an increase in the excitation energy plays an important role. GRA

INTERACTING QUANTUM FIELD THEORY IN CURVED SPACE-TIME Ph.D. Thesis
Richard Gordon Gass 1981 133 p
Avail: Univ. Microfilms Order No. 8126242

The status of interaction quantum field theory in curved space-time was surveyed and several new results were obtained. The use of the renormalization group in curved space-time is discussed and the equation governing the effective conformal coupling xi (kappa) is derived for phi 4 and phi 3. The t(prime) Hooft pole equation for the conformal coupling constant counterterms is derived. Using dimensional regularization phi 3 is renormalized at the one-loop level in a six-dimensional conformally flat space-time. It is shown that if x is treated as a renormalizable coupling constant then phi 3 in a six-dimensional conformally flat space-time is not renormalized at the two-loop level due to the noncancellation of the state dependent infinities. The implications of this are discussed. Dissert. Abstr.

N82-18053 State Univ. of New York at Stony Brook.
TOPICS IN ULTRAVIOLET AND INFRARED PROPERTIES OF PERTURBATIVE QUANTUM FIELD THEORY Ph.D. Thesis
Sunil Mukhi 1981 112 p
Avail: Univ. Microfilms Order No. 8127115

An algorithm was developed to study ultraviolet divergences of the most general real supersymmetric non-liner sigma model in two dimensions, order by order in perturbation theory, using the background field method. The one- and two-loop divergences of this class of models are then explicitly calculated, using the manifestly supersymmetric formulation of perturbation theory in terms of the so-called supergraphs. The results of these calculations are that models defined on Ricci-flat manifolds have no one-or two-loop divergences, while models defined on symmetric spaces or Einstein spaces have no two-loop divergences. The dependence of the cross-section for the process e(+) e(-) yields two hadronic jets is examined in perturbative quantum chromodynamics. An algorithm is obtained by which the sum of all logarithms (in all orders of perturbation theory) of the 'jet parameters' can be calculated to any desired accuracy, in the approximation in which terms suppressed by inverse powers of large energies are neglected. Dissert. Abstr.

CALCULATION OF THE THERMODYNAMIC PROPERTIES OF A MIXTURE OF GASES AS A FUNCTION OF TEMPERATURE AND PRESSURE
Gilberto Colon Dec. 1981 22 p refs Revised
(NASA-TM-83861) Avail: NTIS HC A02/MF A01 CSCL 20M

The evaluation of the thermodynamic properties of a gas mixture can be performed using a generalized correlation which makes use of the second virial coefficient. This coefficient is based on statistical mechanics and is a function of temperature and composition, but not of pressure. The method provides results accurate to within 3 percent for gases which are nonpolar or only slightly polar. When applied to highly polar gases, errors of 5 to 10 percent may result. For gases which associate, even larger errors are possible. The sequences of calculations can be routinely programmed for a digital computer. The thermodynamic properties of a mixture of neon, argon and ethane were calculated by such a program. The result will be used for the design of the gas replenishment system for the Energetic Gamma Ray Experiment Telescope. Author

ORDER: A PROGRAM PACKAGE FOR INFORMATION ON MANAGEMENT OF STAFF ACTIVITIES AND EXPENDITURES
J. Eder, C. Pagny, and H. Reylander 1981 46 p Partly in ENGLISH and FRENCH Submitted for publication
(EUR-7442-EN) Avail: NTIS HC A03/MF A01

A set of two programs for information on management of staff activity and expenditures executed by a Division or other unit is presented. In order to render a detailed and transparent account for the employment of staff and for the utilization of resources, computer programs were developed. The base is given by existing staff, previsions on how to employ these persons in the scope of certain research programs (jobs), and accorded credits. A monthly updating data input consists of actual working time of each person employed for the job to which he is engaged and expenditures. This data is compiled in data sets on disk. The program allows elaboration and sorting of various listings, the most important of them being: (1) staff and organization of the Division; (2) activity and budget reports; and (3) orders and other expenditures. Over the next decade, engineers have an excellent opportunity to use available low-cost, micro-based hardware. Network analysis is a suitable software tool for managing small and large, simple and complex project networks even on the small machines. One may ask whether and how engineers will use micro-based network analysis given its limited use in the past. Data on the current construction projects indicate that engineers will not quickly and easily adapt these micro-based tools. The same data also suggest that established users will more and more depend on their micro computers. Author (GRA)

A SURVEY OF STANDARDIZATION EFFORTS OF CODED CHARACTER SETS FOR TEXT PROCESSING Final Report

Joan E. Knoerdel Sep. 1981 55 p refs

(PB82-105891; NBS-SP-500-81; LC-81-600108) Avail: NTIS HC A04/MF A01 CSCL 05B

A description of the major national and international standards organizations which develop code standards is included. Next, the various code standards are described according to the following categories: basic code sets for information interchange, methods of augmenting those basic code sets, additional control characters to be used with the basic code sets, and code sets developed specifically for text communications, limitations which still exist when interchanging information via communicating text processors are discussed. GRA

TRAINING OF INFORMATION SPECIALISTS

1980 186 p refs In ENGLISH; partly in AFRIKAANS Presented at a Symp. Held at Pretoria, 6-7 May 1980

(PB82-103227) Avail: NTIS HC A09/MF A01 CSCL 05I

In the last decade a new industry has emerged from the conjunction of databases, computers, telecommunications and information retrieval programs. The growth of this industry is reviewed showing how the initial application of computers for production purposes produced new forms of information which allowed the development of computerized retrieval. The various trends in the database field are identified and the results of an economic modelling study are used to project future cost levels for searching databases online. This generates the need for increased training emphasis on knowing the databases if industry is to get maximum return from their use. GRA

CONTRIBUTION OF THE SECOND UNITED NATIONS CONFERENCE ON THE EXPLORATION AND PEACEFUL USES OF OUTER SPACE (UNISPACE)

Nelson deJesus Parada Jun. 1981 40 p

(INPE-2137-RPE/360) Avail: NTIS HC A03/MF A01

Space science activities are summarized. These consist of high energy astrophysics; radio astronomy and solar physics; geomagnetism; and ionosphere, upper atmosphere, and plasma physics. Space technology activities are reported. These consist of satellite technology, systems engineering, computer science and informatics, material science and technology, sensor systems, combustion, space geodesy, digital and analog systems, and telecommunication by satellite. Space applications activities are presented. These involve reception, processing and dissemination of images and data from meteorological satellites; meteorological instrumentation; meteorological applications; dynamic meteorology; image production; agronomy and forestry; ocean resources; environmental analysis; image processing and recognition; crop forecasting; and cartography. International cooperation is also considered. N.W.

VEHICLE TEST REPORT: ELECTRIC VEHICLE ASSOCIATES ELECTRIC CONVERSION OF AN AMC PACER

Theodore W. Price, Vincent A. Wirth, Jr., and Michael F. Pompa 15 Oct. 1981 61 p refs
(Contracts NAS7-100; DE-AI01-78CS-54209)
(NASA-CR-168425; JPL-Pub-81-97; DOE/CS-54209/4) Avail: NTIS HC A04/ A01 CSCL 13F

Tests were performed to characterize certain parameters of the EVA Pacer and to provide baseline data that can be used for the comparison of improved batteries that may be incorporated into the vehicle at a later time. The vehicle tests were concentrated on the electrical drive subsystem; i.e., the batteries, controller and motor. The tests included coastdowns to characterize the road load, and range evaluations for both cyclic and constant speed conditions. A qualitative evaluation of the vehicle's performance was made by comparing its constant speed range performance with other electric and hybrid vehicles. The Pacer performance was approximately equal to the majority of those vehicles assessed in 1977. A.R.H.

UPGRADED DEMONSTRATION VEHICLE TASK REPORT

J. Bryant, K. Hardy, R. Livingston, and J. Sandberg 15 Oct. 1981 158 p refs
(Contracts NAS7-100; DE-AI01-78CS-54209)
(NASA-CR-168424; JPL-Pub-81-98; DOE/CS-54209/5) Avail: NTIS HC A08/MF A01 CSCL 13F

Vehicle/battery performance capabilities and interface problems that occurred when upgraded developmental batteries were integrated with upgraded versions of commercially available electric vehicles were investigated. Developmental batteries used included nickel zinc batteries, a nickel iron battery, and an improved lead acid battery. Testing of the electric vehicles and upgraded batteries was performed in the complete vehicle system environment to characterize performance and identify problems unique to the vehicle/battery system. Constant speed tests and driving schedule range tests were performed on a chassis dynamometer. The results from these tests of the upgraded batteries and vehicles were compared to performance capabilities for the same vehicles equipped with standard batteries. S.L.

FUEL ECONOMY AND EXHAUST EMISSIONS CHARACTERISTICS OF DIESEL VEHICLES: TEST RESULTS OF A PROTOTYPE FIAT 131TC 2.4 LITER AUTOMOBILE

S. S. Quayle Jan. 1982 58 p refs
(NASA Order C-32817-D; Contract DE-AI01-80CS-50194)
(NASA-CR-165535; DOE/NASA/2817-2; DOT-TSC-NASA-81-2) Avail: NTIS HC A04/MF A01 CSCL 13F

The results obtained from fuel economy and emission tests conducted on a prototype Fiat 131 turbocharged diesel vehicle are presented. The vehicle was tested on a chassis dynamometer over selected drive cycles and steady-state conditions. Two fuels were used, a United States number 2 diesel and a European diesel fuel. Particulate emission rates were calculated from dilution tunnel measurements and large volume particulate samples were collected for biological and chemical analysis. It was determined that turbocharging accompanied by complementary modifications results in small but substantial improvements in regulated emissions, fuel economy, and performance. Notably, particulate levels were reduced by 30 percent. Author

COMMUNICATION AND INTEGRATION WITHIN THE AGRICULTURE WATER, WASTE, AND ENERGY INDUSTRIES

D. C. Andrews Sep. 1980 28 p refs
(ERG-033) Avail: NTIS HC A03/MF A01

The special area of interest lies in the possible benefits of integrating and coordinating the activities of the agriculture, water, waste and energy (AWWE) sectors, where large cash and energy savings seem possible. The integration of the AWWE sectors is a specific example, but the comments and methods suggested are general in their application to complex problem-solving areas. A general method is described which, compared with conventional research, makes the collection of information on potential integration and coordination of any complex activities much easier. It also makes it more likely that the information is relevant and correct but, above all, the method ensures that any useful results of the research will be brought to the attention of relevant policy makers, with therefore a better chance that such results will be acted upon. Lateral access networks are proposed as a general means of achieving these practical benefits. J.M.S.

ELECTRIC VEHICLE REFUELLING INFRASTRUCTURE

Mike Baker Oct. 1981 69 p refs

(ERG-038) Avail: NTIS HC A04/MF A01; Secy. Energy Research Group, Milton Keynes, England

Energy and economic aspects of refueling infrastructures required in 2025 by complete fleets of electric battery and coal derived liquid fuel powered road vehicles are compared. Data are drawn from a study of the United Kingdom. The electric car is cheaper than the liquid powered one. If battery exchange is discounted, all electric vehicles have lower fuel costs than their equivalent. The electric vehicle alternative shows a very large saving in both primary energy and running cost. It requires a much smaller installed electricity generating capacity whose load factor is such that it can be totally nuclear. Author (ESA)

INITIAL INTERFACE STANDARDS FOR RAPID TRANSIT CAR SUBSYSTEM COMPONENTS Final Technical Report

R. E. Morris, A. Pali, C. Urian, and W. Walker Jun. 1981 182 p

(Contract DOT-UT-70043)

(PB82-104704; UMTA-IT-06-0175-81-2) Avail: NTIS HC A09/MF A01 CSCL 13F

Initial interface standards for subsystem components of a typical rapid transit car system are presented. These standards were derived from an interface definition analysis of 128 product applications on seven of the newest North American rapid transit car system designs. Analysis of the product specific data provide the basis for either defining the functional and physical interfaces of each major component and the minimal space which must be allocated upon the carbody structure or truck frames to incorporate a major component into the carbody structural design, or determine that a major component does not appear to be amenable to interface standardization. Transit industry adoption of interface standards for car mounted equipment results in cars which cost less to build and own. GRA

OPERATING COSTS AND CHARACTERISTICS OF MINIBUSES Final Report, Jan. - May 1981

Stephen J. Andrle, Frank Spielberg, and Arnie Hungerbuhler (Technology Research and Analysis Corp., Arlington, Va.) Aug. 1981 110 p refs

(Contract DTRS-557-81-C-00053)

(PB82-107038; UMTA-MA-06-0126-81-1; DOT-TSC-UMTA-81-35) Avail: NTIS HC A06/MF A01 CSCL 13B

An analysis of minibus operating characteristics based on operating data obtained from transit operators which use minibuses is presented. Eleven operators were contacted, and useful data were obtained from seven. The focus of this evaluation is on fixed route transit applications of minibuses. The intent of this analysis is to identify the costs of operating minibuses and the manner in which these costs vary. The report also seeks to clarify the conditions in which minibuses are the most cost effective buses to operate. Representative cost and operating statistics are shown for prototypical applications of minibuses in environments found to be appropriate. It makes little difference from a long term point of view whether purpose built or medium duty vehicles are selected. GRA

A METHOD FOR ESTIMATING FUEL CONSUMPTION AND VEHICLE EMISSIONS ON URBAN ARTERIALS AND NETWORKS

Juri Raus Apr. 1981 60 p refs

(PB82-108523; FHWA/TS-81/210) Avail: NTIS HC A04/MF A01 CSCL 13F

A method to estimate motor vehicle fuel consumption and vehicle emissions in an urban driving environment which requires a minimum of field data collection and processing effort was developed. Average transient speed measured by travel time is a good composite parameter reflecting stops and slowdowns and is closely correlated with fuel consumption and vehicle emission rates. Data were obtained for fuel speed and emission speed profiles for a 1980 typical mix of passenger cars, single unit trucks, tractor trailers and busses. Data and computational procedure provide an approach for estimating fuel consumption and emissions and can be used to gain insight into existing traffic operations and the merits of proposed or actual flow improvements. GRA

URBAN DECENTRALIZATION AND THE ROLE OF PUBLIC TRANSPORTATION. EXECUTIVE SUMMARY

Arnold J. Bloch and Louis J. Pignataro Jul. 1981 13 p 2 Vol.
(PB82-114836; UMTA-NY-11-0023-81-3) Avail: NTIS HC A02/MF A01 CSCL 13B

Five case studies were examined in detail in terms of growth patterns, land use policies toward growth and decentralization, and the types of public transportation projects planned or implemented. The case study urban areas are identified as follows: relatively declining urban areas--Boston, MA, and Rochester, NY; maturing sun belt growth--Atlanta, GA; and booming urban areas--Tampa, FL, and San Jose, CA. It was found that most projects were planned with an incomplete or inaccurate understanding of decentralization patterns, were not usually in concert with land use objectives, and others reflected unrealistic expectations of what public transportation services can perform. The recommendations center around a reformulation of the relationship between land use policy and public transportation in the future. GRA

A SEARCH FOR HALOS AROUND SPIRAL GALAXIES Ph.D. Thesis
Bernard Herman Siebers, Jr. 1981 127 p
Avail: Univ. Microfilms Order No. 8127760

An attempt to detect massive luminous halos around a total of 13 edge-on spiral galaxies is described. Observations were made in the wavelength bands 5000 A to 7000 A and 9000 A to 9500 A with a cooled charge coupled device. No halos are seen, and lower limits are set on the mass/light ratio of one galaxy in the 5000 A to 7000 A band and of four galaxies in the 9000 A to 9500 A band. The limits, taken together, imply that in these four galaxies a single stellar-type halo population would have to be made up of stars which are fainter than an M7 red dwarf. Dissert. Abstr.

N82-18083 Michigan Univ., Ann Arbor.
TWO-DIMENSIONAL PHOTOMETRY OF PLANETARY NEBULAE Ph.D. Thesis
Peter Nathan Kupferman 1981 298 p
Avail: Univ. Microfilms Order No. 8125148

Two-dimensional spectrophotometry is used to study problems of geometric structure, optical opacity, temperature variation, and density distribution for three planetary nebulae: NGC 7662, NGC 6720 and NGC 2392. Monochromatic images, using narrow band interference filters were taken using a linear intensified silicon vidicon and the Palomar 1.5 meter telescope. These digital images were used to construct two-dimensional maps of intensity, emissivity, electron temperature and electron density. The Abel transformation is used to solve for the volume emissivity. The distribution of O(0), He(+) and He(+) ions for these nebulae are used to test for optical opacity in the H I and He II Lyman continuus. Electron temperature maps indicate a radial monotonic drop of 2000 K for NGC 7662 and NGC 6720, while the distribution of NGC 2392 is more complex. Electron density maps indicate that knots in NGC 7662 are denser than the surrounding gas, while filaments in NGC 6720 are not. Dissert. Abstr.

N82-18084 Yale Univ., New Haven, Conn.
A PHOTOMETRIC SEARCH FOR WHITE DWARFS IN INTERMEDIATE-AGE OPEN CLUSTERS Ph.D. Thesis
Barbara Jean Anthony-Twarog 1981 247 p
Avail: Univ. Microfilms Order No. 8125653

Star clusters which represent coeval populations of stars, aged 20 to 700 million years old can be dated by the masses and spectroscopic properties of the surviving stars. Any white dwarf members may be assumed to have been originally more massive than these survivors. The open clusters IC 2602, NGC 6405, M 34 and Praesepe were surveyed and the results compared to related studies in other clusters. Photographic photometry was used as well as dispersion spectrophotometry. The evidence suggests that the upper limit for the masses of single star white dwarf precursors is about 5 solar masses. The requirements for faint photoelectric photometry, and spectroscopic confirmation of photometric candidates are stringent, as there may be contaminating populations of blue objects at all galactic latitudes. This result does not rule out white dwarf products of more massive binary systems. Dissert. Abstr.

N82-18085*# National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, Md.
HIGH ENERGY X-RAY OBSERVATIONS OF CYG X-3 FROM FROM OSO-8: FURTHER EVIDENCE OF A 34.1 DAY PERIOD
J. F. Dolan, C. J. Crannell, B. R. Dennis, K. J. Frost, and L. E. Orwig Nov. 1981 21 p refs
(NASA-TM-83862) Avail: NTIS HC A02/MF A01 CSCL 03A

The X-ray source Cyg X-3 (=4U2030+40) was observed with the high energy X-ray spectrometer on OSO-8 for two weeks in 1975 and in 1976 and for one week in 1977. No change in spectral shape and intensity above 23 keV was observed from year to year. No correlation is observed between the source's intensity and the phase of the 34.1 day period discovered by Molteni, et al. (1980). The pulsed fraction of the 4.8 hour light curve between 23 and 73 keV varies from week to week, however, and the magnitude of the pulsed fraction appears to be correlated with the 34.1 day phase. No immediate explanation of this behavior is apparent in terms of previously proposed models of the source. Author

N82-18086 Princeton Univ., N. J.
OPTICAL AND INFRARED SEARCH FOR MASSIVE HALOS OF GALAXIES Ph.D. Thesis
Peter Reed Saulson 1981 146 p
Avail: Univ. Microfilms Order No. 8127759

An investigation of the notion that galaxies are surrounded by massive halos made of very faint stars was made. A review of the evidence concerning the existence, mass, morphology, and composition of massive halos is given, along with a critical examination of previous attempts to detect the halos optically. A report is given of observations made in the R and I bands of four galaxies, using a charge-coupled device detector, which set stringent lower limits on the mass-to-light ratios of the massive halos. The results of new observations of the spiral galaxy NGC 4565 in the infrared K band are presented, showing that the halos must be made of material less luminous than the faintest known main sequence star, VB10. Finally, the implications of these observations for the nature of massive halos are discussed. Dissert. Abstr.

N82-18087 Michigan Univ., Ann Arbor.
A STUDY OF EXTRAGALACTIC SUPERNOVA REMNANTS

Ph.D. Thesis
William Patrick Blair 1981 149 p
Avail: Univ. Microfilms Order No. 8125071

Image tube photographs of eight fields in the nearby spiral galaxy M31, using interference filters that isolate the emission lines of H alpha + [NII] at lambda 6570A and [SII] lambda 6725A, revealed nebulae believed to be supernova remnants (SNRs). Spectroscopic observations were used to confirm this identification for twelve of these nebulae. The initial energy in each remnant had a mean value of E approximately equal to 3 x 10 to the 50th power ergs. Comparison of SNR spectra to shock wave models allowed estimates of nitrogen, oxygen and sulfur in the interstellar gas of M31. Eleven H II regions in M31 were observed for comparison to the SNRs. Element abundances were derived. The variation of abundances as a function of galactocentric distance in M31 were found to be similar to the abundance gradients in our own Galaxy. An emission region in the irregular galaxy NGC 4449 was also investigated. From optical spectrophotometry broad emission lines with widths that suggest an expansion at 3500 km 10 to the minus 1 power were found. About 0.1 solar mass of oxygen is present in the gas that is presently cooling. The absence of hydrogen suggests that nucleosynthesis was important in the star that created this remnant. Combining the optical data with X-ray observations provides a consistent overall picture of the interaction between the SNR and the H II region in which it is embedded. Dissert. Abstr.

ORIGIN OF THE INITIAL INHOMOGENEITIES OF THE UNIVERSE
D. A. Kompaneets, V. N. Lukash, and I. D. Novikov 1981 36 p refs Presented at the Conf. on Origin of the Struct. of the Universe, Tallin, 6-10 Apr. 1981 Submitted for publication
(Rept-652) Copyright. Avail: Issuing Activity

The problem of the origin of small inhomogeneities in the expanding Universe and their evolution near the cosmological singularity is analyzed. All physical fluctuation modes, it is hypothesized, have an equal energy at the initial moment t sub 0 (equipartition hypothesis). This hypothesis implies quite a different relation between the initial perturbation modes than assumed earlier. The mechanisms of amplification of the potential perturbations near the cosmological singularity, it is shown, results in the significant growth of the initial fluctuations. The initial value of the amplitude of the perturbations is made possible by tens of orders of magnitude less than asummed earlier. A physical interpretation of the amplification mechanism is given. The conclusions are applied to the problem of the formation of the large scale structure of the Universe. N.W.

ELECTRIC CHARGE IN THE KRUSKAL SPACE-TIME AND THE JEANS CONJECTURE
M. Demianski (Warsaw Univ.) and I. D. Novikov 1981 31 p refs Submitted for publication
(Rept-653) Copyright. Avail: Issuing Activity

An attempt was made to realize Jeans' conjecture that there might be regions in space, such as galactic centers, where matter could be flowing into our universe from other universes. Studies of a test electromagnetic field produced by a point charge in the maximally extended Schwarzschild space-time, show that an observer at infinity can always get information on the value of the charge, even if it is hidden inside a white hole. It is concluded that the Jean conjecture cannot be realized in this manner. A.R.H.

N82-18092 Texas Univ. at Arlington.
A SPECTROSCOPIC STUDY OF THE RADIAL VELOCITY VARIATIONS AND ACCRETION DISKS FOUND IN FOUR DWARF NOVAE Ph.D. Thesis
Richard James Stover 1981 276 p
Avail: Univ. Microfilms Order No. 8119381

Time resolved spectroscopic observations of the four dwarf novae SS Cyg, EM Cyg, U Gem, and RU Peg are presented. Although these systems were studied previously, all of the spectroscopic studies were done photographically. A linear response, digital detector is employed. Analytic techniques to the study of the radial velocity variations and emission line profiles found in dwarf novae are applied. In the study of SS Cyg cross-correlation techniques were used for the first time to measure the radial velocity variations of the secondary star absorption lines. In the study of U Gem, analysis of the accretion disk emission lines showed that the motion of the material in the disk cannot be described accurately by orbits defined within the three-body approximation. The observations of EM Cyg reveal an unstable accretion disk, with emission lines that vary erratically on timescales of minutes to days. New measurements of the radial velocity variations of the emission and absorption lines found in the spectrum of RU Peg agree with previous measurements but have a higher accuracy. Dissert. Abstr.

GRAVITATIONAL WAVE GENERATION BY STELLAR CORE COLLAPSE Ph.D. Thesis
Thomas Andrew Moore 1981 149 p
Avail: Univ. Microfilms Order No. 8126359

A model of stellar core collapse which treats deviations from spherical symmetry as small perturbations on a spherical background is presented. It may be used to predict qualitative and quantitative features of the gravitational radiation emitted by stellar cores with odd-parity, axisymmetric fluid perturations, and more general asymmetries. The present consensus on the physics of core collapse is reviewed, and the important features, assumptions, and limitations of the model are outlined. A series of model runs are presented and discussed. Several proposals for future research are presented. The mathematical features of the present model and its realization on the computer are explored. Dissert. Abstr.

COMPONENTS IN THE INTERSTELLAR MEDIUM Ph.D. Thesis
Eric Russell Martin 1981 165 p
Avail: Univ. Microfilms Order No. 8127758

The lines of sight toward 32 stars with a procedure that gives velocity components for various interstellar ions are analyzed.

The column densities found for species expected to be relatively undepleted are used to estimate the column density of neutral hydrogen in each component. Whenever possible, the molecular hydrogen excitation temperature, abundances (relative to S II), electron density, and hydrogen volume density are calculated for each component. The results for each star are combined to give total H I column density as a function of (LSR) velocity. The derived velocities correspond well with those found in optical studies. The mean electron density is found to be approximately constant with velocity, but the mean hydrogen volume density is found to vary. The data presented here are consistent with the assumption that some of the velocity components are due to circumstellar material. Dissert. Abstr.

EXTENDED ADIABATIC BLAST WAVES AND A MODEL OF THE SOFT X-RAY BACKGROUND

Donald P. Cox and Paul R. Anderson (California Univ., Santa Barbara) Aug. 1981 85 p refs
(Grant NGL-50-002-044)
(NASA-CR-168411; Rept-137) Avail: NTIS HC A05/MF A01 CSCL 03B

An analytical approximation is generated which follows the development of an adiabatic spherical blast wave in a homogeneous ambient medium of finite pressure. An analytical approximation is also presented for the electron temperature distribution resulting from coulomb collisional heating. The dynamical, thermal, ionization, and spectral structures are calculated for blast waves of energy E sub 0 = 5 x 10 to the 50th power ergs in a hot low-density interstellar environment. A formula is presented for estimating the luminosity evolution of such explosions. The B and C bands of the soft X-ray background, it is shown, are reproduced by such a model explosion if the ambient density is about .000004 cm, the blast radius is roughly 100 pc, and the solar system is located inside the shocked region. Evolution in a pre-existing cavity with a strong density gradient may, it is suggested, remove both the M band and OVI discrepancies. N.W.

THE DISTRIBUTION OF FREE ELECTRONS IN THE INNER GALAXY FROM PULSAR DISPERSION MEASURES

David S. Harding and Alice K. Harding Dec. 1981 33 p refs
Submitted for publication
(NASA-TM-83875) Avail: NTIS HC A03/MF A01 CSCL 03B

The dispersion measures of a sample of 149 pulsars in the inner Galaxy (absolute value of l < 50 deg) were statistically analyzed to deduce the large-scale distribution of free thermal electrons in this region. The dispersion measure distribution of these pulsars shows significant evidence for a decrease in the electron scale height from a local value greater than the pulsar scale height to a value less than the pulsar scale height at galactocentric radii inside of approximately 7 kpc. An increase in the electron density (to a value around .15/cu cm at 4 to 5 kpc) must accompany such a decrease in scale height. There is also evidence for a large-scale warp in the electron distribution below the b + 0 deg plane inside the Solar circle. A model is proposed for the electron distribution which incorporates these features and Monte Carlo generated dispersion measure distributions are presented for parameters which best reproduce the observed pulsar distributions. RADIAL EVOLUTION OF POWER SPECTRA OF INTERPLANETARY ALFVENIC TURBULENCE

B. Bavassano (Istituto di Ricerca e Technologi a per lo Studio del Plasma Nello Spazio, Rome), M. Dobrowolny (Istituto di Ricerca e Technologia per lo Studio del Plasma Nello Spazio, Rome), F. Mariani (Rome Univ.), and N. F. Ness Sep. 1981 28 p refs
(IPS-81-13) Avail: NTIS HC A03/MF A01

The radial evolution of the power spectra of the MHD turbulence within the trailing edge of high speed streams in the solar wind was investigated with the magnetic field data of Helios 1 and 2 for heliocentric distance between 0.3 and 0.9 AU. In the analyzed frequency range (.00028 Hz to .0083 Hz) the computed spectra have, near the Earth, values of the spectral index close to that predicted for an incompressible hydromagnetic turbulence in a stationary state. Approaching the Sun the spectral slope remains unchanged for frequencies f > or approximately .00 Hz, whereas at lower frequencies, a clear evolution toward a less steep fall off with frequency is found. The radial gradient of the power in Alfvenic fluctuations depends on frequency and it increases upon increasing frequency. For frequencies f > or approximately .00 Hz, however, the radial gradient remains approximately the same. Possible theoretical implications of the observational features are discussed. Author

THE ROLE OF CYCLOTRON RESONANCE PROCESSES IN THE SPECTRA OF ACCRETING NEUTRON STARS

Joachim Truemper 1981 11 p refs Presented at Workshop on Gamma-Ray Transients and Related Astrophys. Phenomena, San Diego, Calif., 5-8 Aug. 1981
(ISSN-0340-8922) Avail: NTIS HC A02/MF A01

The theory and observation of cyclotron resonance features in pulsating source spectra are reviewed, and gamma ray bursts are discussed. Scintillation counter, proportional counter, and cooled Ge spectrometer data confirm a first harmonic spectral feature in Her X-1, but not a second one in the 1976 observations. A large number of gamma ray burst sources are neutron stars with magnetic fields of 3 to 8 X 10 to the 12th power Gauss. The sources show extreme temperature stratification (10 to several 100 KeV). Column density range of the absorbing/scattering layers in the sources is narrow. Author (ESA)

THE ORIGIN OF NULLS MODE CHANGES AND TIMING NOISE IN PULSARS

P. B. Jones 1981 14 p refs
(PB82-115221; Rept-74/81) Avail: NTIS HC A02/MF A01 CSCL 03B

A solvable polar cap model obtained previously has normal states which may be associated with radio emission and null states. The solutions cannot be time-independent; the neutron star surface temperature T and mean surface nuclear charge Z are both functions of time. The normal and null states, and the transitions between them, form closed cycles in the T-Z plane. Normal-null transitions can occur inside a fraction of the area on the neutron star surface intersected by open magnetic flux lines. The fraction increases with pulsar period and becomes unity when the pulsar nears extinction. Frequency noise, mode changes, and pulse nulls have a common explanation in the transitions. GRA

H2 EMISSION IN MOLECULAR CLOUDS Ph.D. Thesis

Jacqueline Fischer 1981 123 p
Avail: Univ. Microfilms Order No. 8127104

By observation in the 2 micron lines of vibrationally excited H2, H2 emission near a variety of types of very young objects was detected in the DR21/W75, NGC 7538, OMC-2, NGC 6334 and NGC 1999(HH2) molecular clouds. The observed v = 1.0 S(1) line luminosities range from 0.006 solar luminosity to 2 solar luminosity. Observations in the CO(J = 1.0) line (lambda = 2.6 mm) indicate that all the H2 emission sources, with the exception of the Herbig Haro Object Number 2, are associated with enhanced high velocity wing emission (v nv approximately 7.20 km sec 10 to the minus 1 power) indicative of very supersonic gas flows. For most of the sources, the energy (approximately 10 to the 46th - 10 to the 47th power ergs sec 10 to the minus 1 power) and the momentum (approximately 10 to the minus 1 power g cm 10 to the minus 1 power) observed in the high velocity gas are under the assumption of shock excitation. The line ratios in DR21/H2 are inconsistent with pure ultraviolet excitation and derive an excitation temperature of 1700 K plus or minus 1100 K. The region of broad wing emission in DR21 is more compact than originally reported and the H2 emission region lies just outside the half power radius of the blue blue-wing emission. Dissert. Abstr.

THREE-DIMENSIONAL SHAPE AND POSITION OF VENUS'S BOW SHOCK

V. N. Smirnov, O. L. Vaisberg, S. A. Romanov, J. A. Slavin, C. T. Russel, and D. S. Intriligator 1981 29 p refs
(Rept-656) Copyright. Avail: Issuing Activity

The results of determination of the shock front position near Venus according to the Venera-9, 10 and Pioneer-Venus data are compared. It is shown that the presence of an asymmetry of the three dimensional form of the shock wave and its position in the ecliptic plane makes possible the explanation of the recently obtained discrepancy in determining the front position based on the data from the Venera and Pioneer-Venus data. Both the identified asymmetry of the shock wave form and the rotation of its axis of symmetry in the ecliptic plane additionally at an angle of 7.5 deg are probably associated with the interplanetary magnetic field influence. INTERACTIONS OF COMETS WITH THE SOLAR WIND AND SOLAR RADIATION Ph.D. Thesis

Harry Louis Francis Houpis 1981 347 p
Avail: Univ. Microfilms Order No. 8125439

A basic flow model was developed which uses the Newtonian thin layer approximation for the interaction between two adiabatic hypersonic systems to derive the three dimensional axisymmetric flow structure of the cometary ionosphere. The supersonic outflow of the cometary ions is braked and diverted to the tail by an inner shock whose size and shape is determined analytically. The layer between the inner shock and the tangential discontinuity surface is found to be somewhat thin near the symmetry axis, being about .23 of the inner shock nuclear distance. The effects of sunward jets observed in several comets on the structure of the layer were studied. It is shown that the jets tend to broaden the shock layer both near the axis and toward the flanks. The strong activity of comet Humason (1962 VIII) is explained. The production of dust from comets at large heliocentric distances is considered with particular emphasis placed on the extended dust coma observed in comet Bowell (1980b) at 7.17 AU. Dissert. Abstr.

EARTH-BASED REMOTE SENSING OF PLANETARY SURFACES AND ATMOSPHERES AT RADIO WAVELENGTHS

John R. Dickel [1982] 36 p refs Sponsored by NASA
(NASA-CR-168414) Avail: NTIS HC A03/MF A01 CSCL 03B

Two reasons for remote sensing from the Earth are given: (1) space exploration, particularly below the surfaces or underneath cloud layers, is limited to only a very few planets; and (2) a program of regular monitoring, currently impractical with a limited number of space probes, is required. Reflected solar and nonthermal radiation are discussed. Relativistic electrons, trapped in large magnetospheres on Saturn and Jupiter, are discussed. These electrons produce synchrotron radiation and also interact with the ionosphere to produce bursts of low frequency emission. Because most objects are black-bodies, continuum radiometry is emphasized. Spectroscopic techniques and the measurement of nonthermal emission are also discussed. N.W.

VOYAGER 1 ASSESSMENT OF JUPITER'S PLANETARY MAGNETIC FIELD

J. E. P. Connemey, M. H. Acuna, and N. F. Ness Dec. 1981 20 p refs Submitted for publication
(NASA-TM-83882) Avail: NTIS HC A02/MF A01 CSCL 03B

An estimate of Jupiter's planetary magnetic field is obtained from the Voyager 1 observations of the Jovian magnetosphere. An explicit model for the magnetodisc current system is combined with a spherical harmonic model of the planetary field with both sets of parameters determined simultaneously using a nonlinear generalized inverse methodology. The resulting model fits the observations extremely well throughout the analysis interval (r > 20 Jovian radii). The Jovian internal field model obtained from the Voyager 1 data is very similar to the octopole Pioneer 11 models. The best fitting magnetodisc lies in the centrifugal equator, 2/3 of the way between the rotational and magnetic equators, as appropriate for centrifugal loading of the magnetosphere by a cold plasma. S.L.

EVIDENCE FOR A DISTANT (< 8700 R SUB J) JOVIAN MAGNETOTAIL: VOYAGER 2 OBSERVATIONS

R. P. Lepping, L. F. Burlaga, M. D. Desch, and L. W. Klein (Computer Sciences Corp., Silver Spring, Md.) Jan. 1982 20 p refs Submitted for publication
(NASA-TM-83881) Avail: NTIS HC A02/MF A01 CSCL 03B

A correlative survey of magnetometer (MAG) and Planetary Radio Astronomy (PRA) 1.2 kHz continuum radiation measurements from Voyager 2 provide evidence for at least eight distant Jovian magnetotail sightings occurring about once a month over the first 2/3 of 1981 at distances of approximately 5,000 to 9,000 R sub J. The occurrences of these events are in good agreement with prior Plasma Wave Science and Plasma Science identifications. Observations of these distant magnetotail, or tail filament, encounters appear most prevalent in both MAC and PRA data sets when the spacecraft was closest to the Jupiter-Sun axis at approximately 6,500 R sub J from the planet; the PRA events are also most intense during those times. A specific tail encounter occurring in mid-February 1981 is analyzed and shown to possess a remarkably symmetric magnetic field signature and to have a bipolar field structure in the central region. The bipolarity is characteristic of most of the eight events. Author

THE PRESENT PICTURE OF IO'S ELECTRODYNAMIC COUPLING WITH THE MAGNETOSPHERE OF JUPITER

M. Dobrowolny May 1981 23 p refs
(IPS-81-6) Avail: NTIS HC A02/MF A01

Theoretical models of Io-Jovian magnetosphere interaction are reviewed and Voyager 1 data are analyzed. Magnetic field measurements, Io's plasma torus, and radio measurements are discussed. Magnetic measurements prove the existence of an Alfven wave current system associated with Io. The multiplicity of decametric arcs during one Jupiter rotation is correlated with the multiple Alfven wave system installed by Io around Jupiter. The separation between waves falls in the same range as temporal separation between arcs. The width of an arc agrees well with the width of the corresponding Alfven wings. These associations are phenomenological, and do not constitute a theory of Io's controlled decametric emissions. Author (ESA)

COMETS, INTERSTELLAR MOLECULES AND THE ORIGIN OF LIFE

William M. Irvine and Ake Hjalmarson 1981 34 p refs
Submitted for publication
(PB82-104274; RR-143) Avail: NTIS HC A03/MF A01 CSCL 03B

Comets and the relative abundance of molecules in the gas phase in interstellar clouds are investigated. The justification for a joint treatment lies in the possibility that comets may consist of a frozen matrix of interstellar volatiles and grains formed during the early stages of the collapse of the molecular cloud which ultimately produced the Sun and planets. These topics may in turn be related to the origin of life. The observed properties of comets and current models of their nature and composition are reviewed. The determination of relative molecular abundance in interstellar clouds and the evidence favoring a primarily gas phase chemistry in such regions, concluding with a tabulation of molecular abundances in the cold cloud known as TMC-1 which has been called a protosolar nebula is discussed. SOLAR X-RAY FLARES: SPECTROSCOPIC RESULTS FROM THE EIGHTH ORBITING SOLAR OBSERVATORY AND THE DEVELOPMENT OF A SPACE SHUTTLE BORNE POLARIMETER Ph.D. Thesis

James Randall Lemen 1981 292 p
Avail: Univ. Microfilms Order No. 8125331

Observations made with spectrometers on board the OSO-8 satellite which observed flares during the previous solar minimum period are discussed. The high reflectivity of the crystal spectrometers enabled the observation of the X-ray continuum through all phases of flare development. Various coronal cooling theories were investigated by surveying 30 solar flares. It is shown that neither radiative nor conductive cooling models alone are capable of explaining the majority of events observed. A viable cooling model probably must also include convection. A polarimeter, built and scheduled to fly on the fourth test flight of the space shuttle is described. It has a bandwidth of 5 to 30 kiloelectron volts and is sufficiently sensitive to measure polarization with an accuracy of 1 to 2 percent over times as short as 10 seconds. Dissert. Abstr.

N82-18110 Institut d'Aeronomie Spatiale de Belgique, Brussels.

DIFFERENCES BETWEEN SOLAR WIND PLASMOIDS AND IDEAL MAGNETOHYDRODYNAMIC FILAMENTS

J. Lemaire and M. Roth 1981 24 p refs Submitted for publication
(Aeronomica-Acta-A-232-1981) Avail: Issuing Activity

The time dependent impulsive penetration model of solar wind plasma-magnetosphere interaction is elaborated on in order to emphasize its differences from ideal MHD models. The plasma-magnetic field entities differ from ideal MHD filaments. Their skin is not infinitely thin, but has a physical thickness determined by the gyromotion of the thermal ions and electrons. They are finite and their magnetic flux is interconnected with the interplanetary magnetic flux. When they penetrate into the magnetosphere their magnetic field lines become rooted in the ionosphere, i.e., in a medium with finite transverse conductivity. The external Lorentz force acting on their boundary surface depends on the orientation of their magnetic moment with respect to the external magnetic field. When their mechanical equilibrium is perturbed, hydromagnetic oscillations can be generated. The front side of all solar wind plasmoids which penetrate into the magnetosphere is considered to be the inner edge of the magnetospheric boundary layer, while the magnetopause is the surface where the magnetospheric plasma ceases to have a trapped pitch angle distribution. EVOLUTIONARY VARIATIONS OF SOLAR LUMINOSITY

A. S. Endal [1982] 11 p refs
(Grants NAG5-13; NSF AST-79-19688)
Avail: NTIS HC A02/MF A01 CSCL 03B

The Theoretical arguments for a 30% increase in the solar luminosity over the past 4.7 billion years are reviewed. A scaling argument shows that this increase can be predicted without detailed numerical calculations. The magnitude of the increase is independent of nuclear reaction rates, as long as conversion of hydrogen to helium provides the basic energy source of the Sun. The effect of the solar luminosity increase on the terrestrial climate is briefly considered. It appears unlikely that an enhanced greenhouse effect, due to reduced gases (NH3, CH4), can account for the long-term paleoclimatic trends. Author

N82-18113*# Louisiana State Univ., Baton Rouge. Dept. of Physics and Astronomy.

THE EFFECT OF PERTURBATIONS OF CONVECTIVE ENERGY TRANSPORT ON THE LUMINOSITY AND RADIUS OF THE SUN

A. S. Endal and L. W. Twigg [1982] 39 p refs
(Grant NAG5-13)
(NASA-CR-168445) Avail: NTIS HC A03/MF A01 CSCL 03B

The response of solar models to perturbations of the efficiency of convective energy transport is studied for a number of cases. Such perturbations primarily effect the shallow superadiabatic layer of the convective envelope (at depth of approx. > 1000 km below the photosphere). Independent of the details of the perturbation scheme, the resulting change in the solar radius is always very small compared to the change in luminosity. This appears to be true for any physical mechanism of solar variability which operates in the outer layers of the convection zone. Changes of the solar radius have been inferred from historical observations of solar eclipses. Considering the constraints on concurrent luminosity changes, this type of solar variability must be indicative of changes in the solar structure at substantial depths below the superadiabatic layer of the convective envelope. STATISTICAL PROPERTIES OF MHD FLUCTUATIONS ASSOCIATED WITH HIGH SPEED STREAMS FROM HELIOS 2 OBSERVATIONS
B. Bavassano (Inst. Plasma Spazio, Frascati, Italy), H. Dobrowolny (Inst. Plasma Spazio, Frascati, Italy), G. Fanfoni (Rome Univ.), F. Mariani (Inst. Plasma Spazio, Frascati, Italy), and N. F. Ness May 1981 29 p refs
(IPS-81-5) Avail: NTIS HC A03/MF A01

Helios 2 magnetic data were used to obtain several statistical properties of MHD fluctuations associated with the trailing edge of a given stream served in different solar rotations. Eigenvalues and eigenvectors of the variance matrix, total power and degree of compressibility of the fluctuations were derived and discussed both as a function of distance from the Sun and as a function of the frequency range included in the sample. The results obtained add new information to the picture of MHD turbulence in the solar wind. In particular, a dependence from frequency range of the radial gradients of various statistical quantities is obtained.

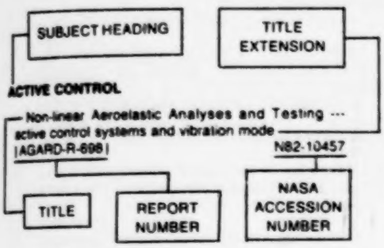
SUBJECT INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 8

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295

ABSORPTION SPECTROSCOPY
Zeeman background correction with an electrothermal graphite braid atomizer N82-17275
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
Spectroscopy of molecular plasmas and kinetics of excited states
[LP-187] N82-18025

ABSORPTIVITY
The effect of fabric coverings on the acoustic performance of modular absorbers
[BBC-RD-1981/8] N82-17957

ABSTRACTS
Publications of the National Bureau of Standards 1980 catalog: A compilation of abstracts and key words and author indexes
[PB82-104688] N82-18062

ACCELERATED LIFE TESTS
The application of mechanical clamps to Portsmouth connectors
[AD-A107632] N82-17505
Accelerated life testing under competing exponential failure distributions
[AD-A107626] N82-17516

ACCELERATION (PHYSICS)
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] N82-18066

ACCELERATION TOLERANCE
Combined effect of simulated weightlessaness and accelerations on energy metabolism enzymes
N82-17820

ACCESS CONTROL
Recovery in distributed processing systems
N82-17102
Generalized polling algorithms for distributed systems N82-17103

ACCESSORIES
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159115] N82-17519

ACCIDENT PREVENTION
Study of air compressor hazards in underground and surface mines
[PB82-105164] N82-17597

ACCURACY
Specifications, tolerances, and other technical requirements for weighing and measuring devices, 1982 edition
[PB82-113952] N82-17487
Comparison between reliability, sensitivity and accuracy of nondestructive inspection methods
[NLR-MP-81009-U] N82-17515
On the contractivity of a complex Runge-Kutta scheme
[MC-NW-112/81] N82-17920

ACETYLENE
Electron paramagnetic resonance saturation characteristics of pristine and doped polyacetylenes
[AD-A107716] N82-17370

ACIDS
Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA)
[AD-A107574] N82-17840

ACOUSTIC ATTENUATION
The reverberation and absorption characteristics of a water-filled chamber with and without a pressure-release wall lining
[AD-A107876] N82-17960

ACOUSTIC EMISSION
Acoustic detection of high energy particles
N82-17966

ACOUSTIC IMPEDANCE
Acoustic ground impedance meter
[NASA-TM-83227] N82-17478

ACOUSTIC MEASUREMENT
A project to test for shale gas in Ohio
[DE82-000916] N82-17572

ACOUSTIC PROPERTIES
Acoustic intensity vectors from an infinite plate with line attachments
[AMTE(N)-TM-81086] N82-17958

ACOUSTIC VELOCITY
Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

ACRYLIC RESINS
Synthesis of fungicidal vinyl and acrylic latices by emulsion polymerization
[AD-A107848] N82-17372

ACTIVATED CARBON
Granular activated carbon installations
[PB82-102492] N82-17659
Removing water-soluble hazardous material spills from waterways with carbon
[PB82-103813] N82-17661
Demonstration physical chemical sewage treatment plant utilizing biological nitrification
[PB82-101643] N82-17675

ACTIVATED SLUDGE
Survey and evaluation of fine bubble dome diffuser aeration equipment
[PB82-105578] N82-17673
Performance of activated sludge processes: Reliability, stability and variability
[PB82-109604] N82-17689

ACTIVITY CYCLES (BIOLOGY)
Cerebral hemispheric activity and automonic nervous function N82-17868

ACTUATOR DISKS
Damage tolerant design for cold-section turbine engine disks
[AD-A107863] N82-17176

ACTUATORS
Evaluation of a pyrotechnic actuator concept by means of the probit statistical method. Justification of the choice of this method; application; examples of application
[ESA-TT-694] N82-17403

ADAPTIVE CONTROL
Computational theory of line drawing interpretation
[NASA-CR-165804] N82-17897

ADDITIVES
Study of the industrial use of organic additives for tempering --- of steels
[CETIM-1-2G-15-0] N82-17341
Electron paramagnetic resonance saturation characteristics of pristine and doped polyacetylenes
[AD-A107716] N82-17370
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] N82-17507
Research in LPE of doped LnibOsub3 and LiTaOsub3 thin films
[AD-A107686] N82-18045

ADHESION
Development status of the 'Adhesion of Metals' experiment and of the UHV Chamber facility
[CISE-1700] N82-17336

ADHESIVE BONDING
Effects of surface morphology and chemical composition on the durability of adhesively bonded aluminum structures
[AD-A107664] N82-17373
Adhesives for field repair of graphite/epoxy composite structures
[AD-A107870] N82-17376
Evaluation of several bonding parameters on the random bending fatigue life of adhesively bonded aluminum joints
[AD-A107995] N82-17533

ADIABATIC CONDITIONS
Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter
[NASA-CR-168411] N82-18095
ADRENAL METABOLISM
Human adrenosympathetic system during immersion in water N82-17819
ADSORBENTS
Development of W-Ta generator
[NASA-CR-167477] N82-17300
Removing water-soluble hazardous material spills from waterways with carbon
[PB82-103813] N82-17661
ADSORPTION
Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281
AERATION
Survey and evaluation of fine bubble dome diffuser aeration equipment
[PB82-105578] N82-17673
AERIAL PHOTOGRAPHY
Photogrammetry software. A package for everyone
[AD-A108098] N82-17570
AERODYNAMIC BALANCE
Experimental trim drag values for conventional and supercritical wings
[NASA-CR-168500] N82-17126
AERODYNAMIC CHARACTERISTICS
Theory and experiment in unsteady aerodynamics
[NLR-MP-80046-U] N82-17128
AERODYNAMIC COEFFICIENTS
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
Experimental verification of an aerodynamic parameter optimization program for wind tunnel testing
[AD-A107727] N82-17134
AERODYNAMIC CONFIGURATIONS
Preliminary design study of a hybrid airship for flight research
[NASA-CR-166246] N82-17152
The armed helicopter in air to air missions
[MBB-UD-317-81-O] N82-17158
AERODYNAMIC DRAG
Experimental trim drag values for conventional and supercritical wings
[NASA-CR-168500] N82-17126
AERODYNAMIC HEAT TRANSFER
A durable, intermediate temperature, direct reading heat flux transducer for measurements in continuous wind tunnels
[AD-A107729] N82-17483
AERODYNAMIC HEATING
Wind tunnel tests of the Space Shuttle foam insulation with simulated debonded regions
[AD-A108079] N82-17250
NASA/Rockwell International Space Shuttle orbiter yaw heating test (OH-109)
[AD-A107703] N82-17251
A durable, intermediate temperature, direct reading heat flux transducer for measurements in continuous wind tunnels
[AD-A107729] N82-17483
AERODYNAMIC INTERFERENCE
An experimental study of airfoil icing characteristics
[NASA-TM-82790] N82-17083
AERODYNAMIC LOADS
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] N82-17643
AERODYNAMIC STABILITY
Correlating measured and predicted inplane stability characteristics for an advanced bearingless rotor
[NASA-CR-166280] N82-17154
AERODYNAMICS
Scientific report of the Fluid Mechanics Research Department N82-17469
AEROELASTICITY
Correlating measured and predicted inplane stability characteristics for an advanced bearingless rotor
[NASA-CR-166280] N82-17154
AERONAUTICAL ENGINEERING
Scientific report of the Fluid Mechanics Research Department N82-17469
DOT/FAA Human Factors Workshop on Aviation. Transcript, vol 1
[AD-A107802] N82-17876
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2
[AD-A107803] N82-17877
AEROSOLS
Development and evaluation of an ambient viable microbial air sampler
[PB82-113689] N82-17488
Stratospheric aerosol properties from Earth limb photography and Mie scattering theory
[AERONOMICA-ACTA-A-235-1981] N82-17705
Stratospheric CCN sampling program --- volcanology, Mount Saint Helens
[NASA-CR-168396] N82-17706
Aerosols distribution of microorganisms in a manned pressurized chamber and effect of artificial air ionization N82-17823
AEROSPACE ENVIRONMENTS
Rat amino acid composition after flight aboard Cosmos-1129 biosatellite N82-17831
AEROSPACE SCIENCES
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064
AEROSPACE VEHICLES
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159115] N82-17519
AFFERENT NERVOUS SYSTEMS
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854
AGE FACTOR
Age related distinctions of cosmonauts regional hemodynamics N82-17829
The stable pedigrees of critical branching populations
[CTH-MATH-1981-15] N82-17927
AGING (BIOLOGY)
Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1981
[PUB-LAW-96-526] N82-18065
AGING (MATERIALS)
Hydrogen bonding in asphaltenes and coal liquids
[DE82-001131] N82-17312
AGRICULTURE
The nature and scope of climate applications N82-17757
Climate applications to agricultural problems N82-17759
Meteorological services in agronomic and economic evaluations of risk N82-17760
The stability of yields in Shanghai and the climatic conditions N82-17761
Food crises and famines: The UNRISD food systems approach N82-17762
Study of climate and its applied aspects N82-17766
The provision of climatic information for agriculture in the USSR N82-17767
On possible impacts of climatic variations on agriculture in China N82-17768
The nature of drought and strategies to reduce its effects N82-17770
The summer monsoon rains over South and East Asia and West Pacific N82-17771
Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772
Further studies on the climatic change during historical times in China N82-17776
Regionality of climatic change in monsoon Asia N82-17777
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] N82-18070
AGROCLIMATOLOGY
Proceedings of the Technical Conference on Climate: Asia and Western Pacific
[WMO-578] N82-17747
A system for crop/climate assessment using meteorological and satellite data N82-17752
AIR FILTERS
Development and evaluation of an ambient viable microbial air sampler
[PB82-113689] N82-17488
AIR INTAKES
Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203
Helicopter air inlets N82-17217
AIR NAVIGATION
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 2: RNAV/MLS transition problems for aircraft
[NASA-CR-3511] N82-17142
Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems N82-17150
AIR POLLUTION
On the Corrosion problems of the TAF F-5 aircraft N82-17354
Sulfur balance in outdoor smog chambers and resulting implications for sulfur dioxide photooxidation studies N82-17651
Modification of spill factors affecting air pollution. Volume 1: An evaluation of cooling as a vapor mitigation procedure for spilled volatile chemicals
[PB82-108382] N82-17657
Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669
The Potential Atmospheric Impact of Chemicals Released to the Environment: Proceedings of four workshops
[PB82-119447] N82-17686
Multi-fuel low-NOx burner development, phase 2
[PB82-115494] N82-17687
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17688
AIR QUALITY
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17688
AIR SAMPLING
Development and evaluation of an ambient viable microbial air sampler
[PB82-113689] N82-17488
Pixe and its application to the element analysis of Milan air particulate matter
[CISE-1685] N82-17656
AIR TRAFFIC CONTROL
Investigation of Wilcox model 585B very high frequency omnidirectional radio range (VOR) system, part 3
[AD-A107855] N82-17149
Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems N82-17150
AIR WATER INTERACTIONS
Energy transport within the Earth's atmosphere ocean system from a climate point of view N82-17729
Ocean's role in processes of short-range climatic variation formation N82-17779
Ocean influence on climate formation and changes N82-17780
AIRBORNE/SPACEBORNE COMPUTERS
Performance study of a distributed microprocessor architecture for use aboard military aircraft N82-17090
Experiences with the experimental FFM-MCS N82-17094
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106
Reconfiguration: A method to improve systems realiability N82-17107
State-of-the-art computer monitoring equipment N82-17116
Integrated control of mechanical system for future combat aircraft N82-17117
F/A-18A tactical airborne computational subsystem N82-17119
Automated Power Systems Management (APSM)
[NASA-CR-168423] N82-17258
Development of a simple, self-contained flight test data acquisition system
[NASA-CR-168438] N82-17478
AIRCRAFT ACCIDENT INVESTIGATION
Aircraft accident report - Universal Airways, Inc., Beech 65-A80/Excalibur Conversion, N100UV, near Madisonville, Texas, July 2, 1981
[NTSB-AAR-81-17] N82-17138

AIRCRAFT ACCIDENTS
Aircraft accident report - Universal Airways, Inc., Beech 65-A80/Excalibur Conversion, N100UV, near Madisonville, Texas, July 2, 1981
[NTSB-AAR-81-17] N82-17138
AIRCRAFT CONSTRUCTION MATERIALS
Detection and prevention of corrosion in Royal Air Force aircraft N82-17351
Corrosion control measures for military aircraft: Present UK requirements and future developments N82-17358
AIRCRAFT DESIGN
The effect of increasingly more complex aircraft and avionics on the method of system design N82-17088
A tutorial on distributed processing in aircraft/avionics applications N82-17089
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
Preliminary design study of a hybrid airship for flight research
[NASA-CR-166246] N82-17152
Systems study of transport aircraft incorporating advanced aluminum alloys
[NASA-CR-165820] N82-17153
Aircraft Corrosion
[AGARD-CP-315] N82-17349
Scientific report of the Fluid Mechanics Research Department N82-17469
AIRCRAFT ENGINES
Damage from engine debris projectiles N82-17165
Maintenance posture for quick start
[AD-A107553] N82-17177
AIRCRAFT EQUIPMENT
Built-in-test Equipment Requirements Workshop. Workshop presentation
[AD-A107842] N82-17085
Corrosion control test method for avionic components
[AD-A108061] N82-17171
Corrosion in naval aircraft electronic systems N82-17363
AIRCRAFT GUIDANCE
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 2: RNAV/MLS transition problems for aircraft
[NASA-CR-3511] N82-17142
AIRCRAFT HAZARDS
Aircraft icing avoidance and protection
[PB82-108135] N82-17139
AIRCRAFT INDUSTRY
Helicopter development in France N82-17216
Corrosion prevention measures used in the construction of an aircraft airframe: The case of 2014 and 2214 alloys N82-17360
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2
[AD-A107803] N82-17877
AIRCRAFT INSTRUMENTS
Economic considerations for real-time naval aircraft/avionics distributed computer control systems N82-17097
AIRCRAFT LANDING
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873
Time domain identification of an optimal control pilot model with emphasis on the objective function
[NASA-CR-168487] N82-17874
AIRCRAFT MAINTENANCE
Aircraft Corrosion
[AGARD-CP-315] N82-17349
US Naval fleet aircraft corrosion N82-17350
Detection and prevention of corrosion in Royal Air Force aircraft N82-17351
An airline view of the corrosion problem N82-17352
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353
The experience of corrosion on French military aerodynes N82-17355
Design and maintenance against corrosion of aircraft structures N82-17356
AIRCRAFT NOISE
Blade planform for a quiet helicopter
[NASA-CR-166256] N82-17121
Noise impact on communities from aircraft
[GPO-80-617] N82-17655
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871
AIRCRAFT PARTS
Engine/drive/airframe compatibility: A way of life N82-17220
Corrosion prevention methods developed from direct experience with aerospace structures N82-17359
AIRCRAFT PERFORMANCE
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
AIRCRAFT PILOTS
In-flight diets and quantitative adequacy thereof to pilot expenditure N82-17813
Cardiac output and cardiac cycle phase structure of pilots during flights N82-17821
Time domain identification of an optimal control pilot model with emphasis on the objective function
[NASA-CR-168487] N82-17874
DOT/FAA Human Factors Workshop on Aviation. Transcript, vol 1
[AD-A107802] N82-17876
AIRCRAFT PRODUCTION
Systems study of transport aircraft incorporating advanced aluminum alloys
[NASA-CR-165820] N82-17153
AIRCRAFT STRUCTURES
Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160
Description of projectile threats N82-17161
Analysis methods for predicting structural response to projectile impact N82-17162
Analysis methods for ballistic damage size and type N82-17163
Damage from High explosive (HE) projectiles N82-17164
Hydrodynamic ram damage N82-17166
Effects of cyclic loading on projectile impact damage N82-17167
Stiffness degradation of impact damaged structure N82-17168
Analysis of multiple load path panels containing impact damage N82-17170
Superplastic aluminum evaluation
[AD-A107760] N82-17338
Corrosion Fatigue --- conferences
[AGARD-CP-316] N82-17342
Mechanisms of corrosion fatigue --- of high strength aluminum alloys N82-17343
Flight-by-flight corrosion fatigue tests N82-17348
Design and maintenance against corrosion of aircraft structures N82-17356
Corrosion prevention methods developed from direct experience with aerospace structures N82-17359
Corrosion prevention measures used in the construction of an aircraft airframe: The case of 2014 and 2214 alloys N82-17360
Recent developments in materials and processes for aircraft corrosion control N82-17361
New concepts in multifunctional corrosion for aircraft and other systems N82-17362
Corrosion protection schemes for aircraft structures: Some examples for the corrosion behaviour of Al alloys N82-17364
The ultrasonic inspection of C.F.C. --- carbon fiber sine wave spars
[MDR-0465] N82-17513
AIRFOIL PROFILES
An experimental study of airfoil icing characteristics
[NASA-TM-82790] N82-17083
AIRFOILS
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
AIRFRAMES
Engine/drive/airframe compatibility: A way of life N82-17220
AIRLINE OPERATIONS
Aircraft Corrosion
[AGARD-CP-315] N82-17349
An airline view of the corrosion problem N82-17352
Design and maintenance against corrosion of aircraft structures N82-17356
AIRPORTS
Requirements for instrument approaches to converging runways
[AD-A108075] N82-17144
Survey of 101 US airports for new multiple instrument approach concepts --- runways
[AD-A107812] N82-17229
Noise impact on communities from aircraft
[GPO-80-617] N82-17655
AIRSHIPS
Preliminary design study of a hybrid airship for flight research
[NASA-CR-166246] N82-17152
AIRSPEED
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
ALBEDO
Effects of multiple scattering and surface albedo on the photochemistry of the troposphere
[NASA-CR-168417] N82-17707
Investigation of models for large scale meteorological prediction experiments
[NASA-CR-168415] N82-17744
ALCOHOLS
DOE's alcohol fuels awards process resulted in questionable award selections and limited small business success
[AD-A106885] N82-17392
ALGAE
Principal components biplots and alpha and beta diversity --- of diatoms in moorland pools
[IWIS-A-81-ST-23-15] N82-17923
ALGEBRA
F-purity and rational singularity N82-17936
ALGOL
An underlying context-free grammar of ALGOL 68 plus
[MC-IW-171/81] N82-17891
An operator-priority grammar for ALGOL 68 plus
[MC-IW-173/81] N82-17893
ALGORITHMS
Generalized polling algorithms for distributed systems N82-17103
Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001086] N82-17406
Comparison of rezone algorithms for incompressible fluid flow calculations
[LOG-J12823] N82-17452
DOE-2 verification project, phase 1
[LA-8295-MS] N82-17616
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805
An isotonic regression algorithm
[AD-A107620] N82-17886
Two papers on recursive evaluation of compound distributions
[AD-A107912] N82-17914
A simple heuristic approach to simplex efficiency
[AD-A107913] N82-17915
Two estimation methods for nonstationary spectra
[ENST-D-81006] N82-17926
Derivation of quasi-Newton updates for nonlinear equations and unconstrained optimization N82-17933
ALIGNMENT
Definition of the MAROTS reflector meridan line by interpolation: Application to optical measurements
[ESA-TT-696] N82-18003
ALKENES
Transparent polyolefin film armor
[AD-A107562] N82-17377
ALLOYS
Microstructural effects in abrasive wear
[DE82-003653] N82-17339
ALPHANUMERIC CHARACTERS
A survey of standardization efforts of coded character sets for text processing
[PB82-105691] N82-18061

ALTERNATING CURRENT
Model calculations of the tearing instability associated with ac-modulation of the plasma-current in Tokamaks
[IPP-6/199] N82-18013
ALTITUDE TOLERANCE
Method of assessing individual resistance of rats to hypoxic hypoxia N82-17837
ALUMINUM
Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-108] N82-17526
Evaluation of several bonding parameters on the random bending fatigue life of adhesively bonded aluminum joints
[AD-A107995] N82-17533
ALUMINUM ALLOYS
Systems study of transport aircraft incorporating advanced aluminum alloys
[NASA-CR-165820] N82-17153
Superplastic aluminum evaluation
[AD-A107760] N82-17338
Mechanisms of corrosion fatigue --- of high strength aluminum alloys N82-17343
Corrosion fatigue behaviour of some aluminium alloys N82-17345
Flight-by-flight corrosion fatigue tests N82-17348
Corrosion prevention measures used in the construction of an aircraft airframe: The case of 2014 and 2214 alloys N82-17360
Recent developments in materials and processes for aircraft corrosion control N82-17361
Corrosion protection schemes for aircraft structures: Some examples for the corrosion behaviour of Al alloys N82-17364
ALUMINUM BORON COMPOSITES
The influence of notch length and ligament length on the toughness of boron fiber reinforced aluminum
[DFVLR-FB-81-22] N82-17270
ALUMINUM COATINGS
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
ALUMINUM COMPOUNDS
Effects of surface morphology and chemical composition on the durability of adhesively bonded aluminum structures
[AD-A107664] N82-17373
ALUMINUM OXIDES
Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity
[AD-A107617] N82-17371
AMMONIA
Laser spectroscopy of molecular beams N82-17293
Theoretical calculations of power-broadened microwave lineshapes N82-17296
Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation N82-17297
Experimental correlation and self consistent analysis of an IR, FIR, MW triple resonant system in ammonia N82-17996
AMORPHOUS MATERIALS
Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307
AMPLITUDE DISTRIBUTION ANALYSIS
Amplitude density distribution of a sum of speech signals
[IND-FB-106] N82-17437
AMPLITUDE MODULATION
Multiple target tracking with an AM reticule seeker
[AD-A107854] N82-18000
ANALOG SIMULATION
A verification study of the Improved Regional Rapid Analog System (IRRAS)
[AD-A107647] N82-17786
ANALOGS
Present status of long-range weather forecasting N82-17755
ANALYSIS (MATHEMATICS)
Quasi-Newton methods converge at the golden section rate
[AD-A106680] N82-17901
Interacting quantum field theory in curved space-time N82-18052
ANDES MOUNTAINS (SOUTH AMERICA)
Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733
ANELASTICITY
Inelastic buckling of columns of L and U cross section --- calculated using a flow boundary formulation
[ESA-TT-709] N82-17544
ANGLES (GEOMETRY)
Regional properties of angular reflectance models N82-17599
Material on the dynamics of Earth-Moon systems: Planetary libration, fundamentals
[MITT-155] N82-18098
ANGULAR CORRELATION
Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365
ANGULAR RESOLUTION
Phase demodulator with high temporal and angular resolution for the measurement of Faraday rotation by means of a carrier frequency --- in plasma experiments
[IPF-81-4] N82-17441
Material on the dynamics of Earth-Moon systems: Planetary libration, fundamentals
[MITT 155] N82-18098
ANIONS
Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
ANISOTROPY
Implementation of anisotropic and nonlinear thermal stress models in ADINA 78
[AD-A108085] N82-17529
Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036
ANNUAL VARIATIONS
Great Lakes water levels, 1980. Daily and monthly average water surface elevations
[PB82-107608] N82-17589
DOE-2 verification project, phase 1
[LA-8295-MS] N82-17616
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17698
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan N82-17753
Climate modeling N82-17754
On possible impacts of climatic variations on agriculture in China N82-17768
Sensitivity of a climatologically-driven sea ice model to the ocean heat flux
[NASA-TM-83877] N82-17799
ANNULI
Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184
ANODIZING
Corrosion fatigue behaviour of some aluminium alloys N82-17345
ANOMALIES
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
Graphs of anomalous energy confinement times for ASDEX, INTOR, JET, PLT, TFTR and ZEPHYR --- tokamaks
[IPP-6/200] N82-18012
ANTARCTIC REGIONS
Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica N82-17546
Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] N82-17563
ANTENNA RADIATION PATTERNS
Activities report of the Antennas, Propagation and Digital Image-Processing Group: Research in progress N82-17425
ANTENNAS
Institute director discusses KRT-10 and other space antennas N82-17240
ANTIAIRCRAFT MISSILES
Reflections on aircraft unmask ranges
[AD-A107953] N82-17948
ANTIFRICTION BEARINGS
Magnetic bearing reaction wheel tests --- performed on a three-axis air bearing simulator
[ESA-TT-699] N82-17511
ANTIMISSILE DEFENSE
Defense of radio-electronic equipment
[AD-A108114] N82-17430
ANTISEPTICS
Comparative evaluation of antimicrobial activity of some urine preservatives N82-17830
APOLLO SOYUZ TEST PROJECT
Crystal growth from the vapor phase experiment MA-085, section 7
[NASA-CR-161965] N82-18043
APPLICATIONS PROGRAMS (COMPUTERS)
Training of information specialists
[PB82-103227] N82-18063
APPROXIMATION
Approximation by a sum of complex exponentials utilizing the pencil of function method
[AD-A107742] N82-17913
Generalization of Kramers-Kronig transforms and some approximations of relations between viscoelastic quantities
[MS-1569] N82-17951
Application of eikonal approximation to charge transfer in energetic ion-atom collisions N82-17986
AQUEOUS SOLUTIONS
Substitution and excited state electron transfer reactions of transition metal complexes in organized media N82-17331
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108695] N82-17667
AQUIFERS
Digital model of the unconsolidated aquifer system in the Modesto area, Stanislaus and San Joaquin Counties, California
[PB82-102559] N82-17593
Analysis of geopressured aquifers
[PB82-103662] N82-17595
ARABIAN SEA
Arabian sea project of 1980: Composites of infrared images
[AD-A107910] N82-17567
ARCHIPELAGOES
Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733
ARCHITECTURE
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001086] N82-17406
DOE-2 verification project, phase 1
[LA-8295-MS] N82-17616
Theoretical basic for CTABS80: A computer program for three-dimensional analysis of building systems
[AD-A107635] N82-17890
ARCHITECTURE (COMPUTERS)
A tutorial on distributed processing in aircraft/avionics applications N82-17089
SAVANT: A database manipulation technique for system architecture design verification and analysis N82-17095
Signal processing with systolic arrays N82-17096
Economic considerations for real-time naval aircraft/avionics distributed computer control systems N82-17097
Stage-state reliability analysis technique N82-17104
Mirage 2000 weapons systems architecture N82-17118
A study of the selection of microcomputer architectures to automate planetary spacecraft power systems
[NASA-CR-168412] N82-17259
ARGON
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
Induced luminescence by charged particles on gaseous, liquid and solid argon
[CRN-CPR-80-10] N82-17316
Magnetic circular dichroism and Faraday rotation of cesium-argon excimers and cesium dimers N82-18030
ARMOR
Transparent polyolefin film armor
[AD-A107562] N82-17377

AROMATIC COMPOUNDS
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279
ARTIFICIAL CLOUDS
Rocket-borne instrumentation for the measurement of atomic oxygen based on chemical release in the lower thermosphere
[AERONOMICA-ACTA-A-231-1981] N82-17257
Natural and HISS cloud droplet data as sampled during the 1980 - 1981 AEFA/Saint Paul field program
[AD-A107577] N82-17784
ASBESTOS
Assessment and control of chrysotile asbestos emissions from unpaved roads
[PB82-102526] N82-17411
ASCORBIC ACID METABOLISM
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824
ASHES
Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410
ASIA
Proceedings of the Technical Conference on Climate: Asia and Western Pacific
[WMO-578] N82-17747
Regionality of climatic change in monsoon Asia
N82-17777
ASPHALT
Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models
[PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study
[PB82-112913] N82-17415
ASPHALTENES
Hydrogen bonding in asphaltenes and coal liquids
[DE82-001131] N82-17312
ASSAYING
Small sample assay station users guide
[LA-8731-M] N82-17485
ASSEMBLER ROUTINES
PEP: An interactive programming system with an ALGOL-like programming language --- program editor and processor (PEP)
[MC-IW-172/81] N82-17892
ASSEMBLY LANGUAGE
Intercomputer transportation of assembly language software through decompilation
[AD-A107645] N82-17881
ASSESSMENTS
Initial assessment of selected advanced lubricating oil filters
[DE82-002420] N82-17506
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873
ASTRONOMICAL PHOTOMETRY
A photometric search for white dwarfs in intermediate-age open clusters N82-18084
ASTRONOMICAL SPECTROSCOPY
High energy X-ray observations of CYG X-3 from from OSO-8: Further evidence of a 34.1 day period
[NASA-TM-83862] N82-18085
ASTRONOMY
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064
ASTROPHYSICS
Institute director discusses KRT-10 and other space antennas N82-17240
Gamma-ray instrumentation and its uses in space
N82-17241
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064
Optical and infrared search for massive halos of galaxies N82-18086
H2 emission in molecular clouds N82-18101
ASYMMETRY
QCD and weak asymmetries in lepton pair production N82-17965
ASYMPTOTES
Asymptotic behavior of the Boltzmann equation with infinite range forces
[CTH-MATH-1981-18] N82-17930
ASYMPTOTIC METHODS
Asymptotic methods especially in combustion
[AD-A108023] N82-17306
ATLANTIC OCEAN
HF propagation assessment studies over paths in the Atlantic
[AD-A107599] N82-17436
Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results
N82-17735
ATMOSPHERIC CHEMISTRY
Global tectonic control of secular variations in phanerozoic sedimentary rock/ocean/atmosphere chemistry N82-17545
The Potential Atmospheric Impact of Chemicals Released to the Environment: Proceedings of four workshops
[PB82-119447] N82-17686
Chemical fluctuations and incoherent scattering theory in the terrestrial D region
[AERONOMICA-ACTA-A-233-1981] N82-17704
ATMOSPHERIC CIRCULATION
Possibilities for avoiding strong variations of the electrical output power of wind energy systems
N82-17625
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17698
Climatic influences of residential energy consumption N82-17742
Moisture stress and mid-tropospheric circulation patterns influencing the forest-prairie transition in south central United States N82-17743
Investigation of models for large scale meteorological prediction experiments
[NASA-CR-168415] N82-17744
Tropical easterly jet and contribution of interacting atmospheric waves in monsoon region N82-17758
Climate circulation processes in South-East Asia during winter monsoon N82-17769
The summer monsoon rains over South and East Asia and West Pacific N82-17771
Analytic modeling of severe vortical storms
[AD-A107706] N82-17785
ATMOSPHERIC COMPOSITION
Pixe and its application to the element analysis of Milan air particulate matter
[CISE-1685] N82-17656
ATMOSPHERIC EFFECTS
On the Corrosion problems of the TAF F-5 aircraft
N82-17354
New concepts in multifunctional corrosion for aircraft and other systems N82-17362
Corrosion in naval aircraft electronic systems
N82-17363
The World Climate Program N82-17748
ATMOSPHERIC ELECTRICITY
The explanation of ball lightning N82-17788
ATMOSPHERIC HEAT BUDGET
Energy transport within the Earth's atmosphere ocean system from a climate point of view
N82-17729
An analysis of Wangara micrometeorology: Surface stress, sensible heat, evaporation, and dewfall
[PB82-114190] N82-17793
ATMOSPHERIC MODELS
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17698
Climate modeling N82-17754
Energy and climate in South-East Asia and the Western Pacific N82-17764
Analytic modeling of severe vortical storms
[AD-A107706] N82-17785
Mean atmospheric conditions: Australian tropical operating conditions
[AD-A107904] N82-17787
ATMOSPHERIC MOISTURE
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17698
Moisture stress and mid-tropospheric circulation patterns influencing the forest-prairie transition in south central United States N82-17743
ATMOSPHERIC RADIATION
Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments
[INPE-2119-RPE/343] N82-17711
Cosmic ray NM-64 neutron monitor data-4
[IPS-81-9] N82-18116
ATOM CONCENTRATION
Measurement of fluorine atom concentrations and reaction rates in chemical laser systems
[AD-A108072] N82-17495
ATOMIC COLLISIONS
Application of eikonal approximation to charge transfer in energetic ion-atom collisions N82-17986
ATOMIC EXCITATIONS
A density functional approach to many-body effects in the optical response of atoms N82-17964
Beam-foil studies of atomic mean-lives in the vacuum ultraviolet N82-17987
Electronic excitation of helium and krypton by electron impact N82-18032
ATOMIC SPECTRA
Measurement of fluorine atom concentrations and reaction rates in chemical laser systems
[AD-A108072] N82-17495
ATOMIC STRUCTURE
Characterization of the electronic and molecular structures of transition metal semiquinone and catecholate complexes N82-17329
A density functional approach to many-body effects in the optical response of atoms N82-17964
Electronic structure of grain boundaries and interfaces in polycrystalline zinc oxide
[AD-A107864] N82-18046
ATOMIZERS
Zeeman background correction with an electrothermal graphite braid atomizer N82-17275
ATOMS
A density functional approach to many-body effects in the optical response of atoms N82-17964
A theoretical study of three-body correlations in atomic fluids N82-17989
ATROPHY
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
ATTITUDE CONTROL
Control system design for the large space systems technology reference platform
[NASA-CR-168426] N82-17255
ATTITUDE INDICATORS
A velocity vector measuring system with 13 asymmetric wedge type yawmeters --- measuring flow distribution around the empennage of STOL models
[NAL-TR-674] N82-17477
AUDIOMETRY
Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856
AUDITORY PERCEPTION
Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856
Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults N82-17857
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861
AUDITORY SIGNALS
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860
AUDITORY STIMULI
A study of the acoustic reflex as elicited by selected environmental noise stimuli N82-17858
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861

AUGER EFFECT
High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001076] N82-17577
AURORAL IRRADIATION
Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora N82-17700
AURORAS
Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora N82-17700
AUSTENITIC STAINLESS STEELS
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions
[VTT-88] N82-17340
AUSTRALIA
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696
AUTOIONIZATION
New excitation and ionization mechanism of ions in dense plasmas: The role of autoionizing states
[IPPJ-549] N82-18009
AUTOMATIC CONTROL
Experiences with the experimental FFM-MCS N82-17094
Integrated control of mechanical system for future combat aircraft N82-17117
Commutated automatic gain control system
[NASA-CR-168440] N82-17140
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 2: RNAV/MLS transition problems for aircraft
[NASA-CR-3511] N82-17142
Automated Power Systems Management (APSM)
[NASA-CR-168423] N82-17258
An automated reagent preparation system for fast reaction-rate analyses N82-17273
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17875
AUTOMATIC FLIGHT CONTROL
The development of asynchronous multiprocessor concepts for flight control system applications N82-17091
Continuous reconfiguration in a multi-microprocessor flight control system N82-17093
AUTOMATIC WEATHER STATIONS
World Weather Watch Tropical Cyclone Program. Typhoon operational experiment (Topex): Automatic weather stations for tropical cyclone areas --- systems design and operation
[WMO-570] N82-17790
AUTOMOBILE FUELS
Electric vehicle refuelling infrastructure
[ERG-038] N82-18073
AUTOMOBILES
Rolling resistance measurements 106 passenger car tires
[PB82-116625] N82-17512
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] N82-18068
AUTONOMIC NERVOUS SYSTEM
Cerebral hemispheric activity and automonic nervous function N82-17868
AVIONICS
Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086
The effect of increasingly more complex aircraft and avionics on the method of system design N82-17088
A tutorial on distributed processing in aircraft/avionics applications N82-17089
Functional versus communication structures in modern avionic systems N82-17092
Economic considerations for real-time naval aircraft/avionics distributed computer control systems N82-17097
Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105
Practical aspects which apply to MIL-STD-1553B data networks --- avionics and weapons delivery N82-17111
Dispersed sensor processing mesh project --- avionics N82-17113
Next generation military aircraft will require hierarchical/multilevel information transfer systems --- packet switching N82-17114
SIFT: An ultra-reliable avionic computing system N82-17115
Integrated control of mechanical system for future combat aircraft N82-17117
F/A-18A tactical airborne computational subsystem N82-17119
F/A-18 weapons system support facilities N82-17120
Technology overview for advanced aircraft armament system program
[AD-A107660] N82-17155
Corrosion control test method for avionic components
[AD-A108061] N82-17171
Digital Avionics Information System (DAIS) documentation
[AD-A108000] N82-17172
Function specifications for the A-7E Function Driver module
[AD-A107922] N82-17173
US Naval fleet aircraft corrosion N82-17350
AXIAL COMPRESSION LOADS
Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187
AXIAL FLOW
Survey on the effect of blade surface roughness on compressor performance N82-17191
Results of calculations N82-17198
The through flow calculations N82-17199
Evaluation of profile loss predictions based on diffusion factors N82-17200
Axial-flow turbomachine through flow calculation methods N82-17201
AXIAL FLOW TURBINES
Through flow calculations in axial turbomachines
[AGARD-AR-175] N82-17178
Review of performance prediction methods N82-17179
Influence of correlations and computational methods on the prediction of overall efficiency N82-17180
Influence of correlations and computational procedures on flow field predictions N82-17181
Cambridge turbine: Geometry, test data and sample calculation N82-17182
The two stage aero engine turbine N82-17183
Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184
Hannover Turbine. Geometry, test data and sample calculation N82-17185
Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187
Part span damper loss prediction for transonic axial fan rotors N82-17192
Axial compressor stall and surge N82-17194
Summary of answers to the questionnaire N82-17195
Single stage transonic compressor and equivalent plane cascade N82-17196
Blade-to-blade computations and boundary layer corrections in axial compressors and turbines N82-17202
AXIOMS
F-purity and rational singularity N82-17936
AZIMUTH
Bangui anomaly
[WORK-M-45] N82-17556
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
AZINES
Laser spectroscopy of molecular beams N82-17293

B

BACKWASH
Surveys of flow-field around empennage of the NAL STOL-research-aircraft model
[NAL-TR-677] N82-17124
BALANCE
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17696
BALL BEARINGS
An investigation of the early detection of defects in ball bearings by the vibration monitoring
[NAL-TR-675] N82-17504
BALL LIGHTNING
The explanation of ball lightning N82-17756
BALLISTIC MISSILE DECOYS
Multiple target tracking with an AM reticule seeker
[AD-A107854] N82-18000
BALLISTICS
Transparent polyolefin film armor
[AD-A107562] N82-17377
BALLOON-BORNE INSTRUMENTS
Large horizontal electric fields measured at heights of the Brazilian magnetic anomaly and association to local energetic particle precipitation
[INPE-2120-RPE/344] N82-17712
BAND STRUCTURE OF SOLIDS
Energy bands and superlattice formation in titanium diselenide N82-18036
The Fermi surface reconstructed momentum density of V3Si from positron annihilation experiments N82-18039
A model for electrons existing in hybridized narrow and wide bands
[INPE-2127-RPE/351] N82-18042
BANDWIDTH
Signal processing with systolic arrays N82-17096
Amplitude density distribution of a sum of speech signals
[IND-FB-106] N82-17437
BARITE
On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116706] N82-17725
BAROCLINIC INSTABILITY
Subsynoptic-scale baroclinic instability
[INPE-2241-PRE/027] N82-17745
BAROCLINITY
Subsynoptic-scale baroclinic instability
[INPE-2241-PRE/027] N82-17745
BAROMETERS
Gravity maps of Central Africa N82-17557
BARYON RESONANCES
A quark model of the nonstrange baryons N82-17988
BARYONS
A quark model of the nonstrange baryons N82-17988
BASALT
The geochemistry of sulfur and carbon in basaltic melts N82-17734
BATHS
Study of the industrial use of organic additives for tempering --- of steels
[CETIM-1-2G-15-0] N82-17341
BATHYMETERS
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] N82-17803
BATTERY CHARGERS
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] N82-17648
Electric vehicle refuelling infrastructure
[ERG-038] N82-18073
BAYS (TOPOGRAPHIC FEATURES)
Sea grant maritime heritage series: The bight of the big apple
[PB82-119439] N82-17685
BCH CODES
A study of high density bit transition requirements versus the effects on BCH error correcting coding
[NASA-CR-161957] N82-17884
BEAM INJECTION
Space and time resolved measurements of ion energy distributions by neutral beam injection in TORTUR 2 --- toroidal turbulence experiment (TORTUR)
[REPT-81-137] N82-17976
Microwave plasma source for neutral-beam injection systems
[DE81-029122] N82-18020
BEAMS (SUPPORTS)
Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-108] N82-17526

BEARINGLESS ROTORS
Correlating measured and predicted inplane stability characteristics for an advanced bearingless rotor [NASA-CR-166280] N82-17154
BEARINGS
Effects of bearing/bypass load interaction on laminate strength [AD-A108006] N82-17271
BEDROCK
Petrology of the ultramafic xenoliths on the Koolau shield, Oahu, Hawaii. Part 1: Liquidus phase relations on the join anorthite-forsterite-silica at 10 kbar, part 2 N82-17727
BEECHCRAFT AIRCRAFT
Aircraft accident report - Universal Airways, Inc., Beech 65-A80/Excalibur Conversion, N100UV, near Madisonville, Texas, July 2, 1981 [NTSB-AAR-81-17] N82-17138
BENDING FATIGUE
Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature [NAL-TR-678] N82-17368
BENZENE
A static screened potential method for the calculation of electronic transition properties of azabenzenes N82-17272
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
BETA FACTOR
First-order toroidal correction to the minimum energy state of a cylindrical plasma column of finite beta [REPT-81-133] N82-18011
BIBLIOGRAPHIES
Publications and reports on contracts and grants, 1980 [PB82-103219] N82-17792
Publications of the National Bureau of Standards 1980 catalog: A compilation of abstracts and key words and author indexes [PB82-104688] N82-18062
Technology transfer and the management of human services [PB82-105644] N82-18077
BIMETALS
The structural consequences of transition metal basicity: Investigation of various gold complexes N82-17332
BINARY STARS
High energy X-ray observations of CYG X-3 from from OSO-8: Further evidence of a 34.1 day period [NASA-TM-83862] N82-18085
BINAURAL HEARING
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861
BINDERS (MATERIALS)
Briquetting of fine coal using a sodium chluride binder [DE82-000632] N82-17395
BIOASSAY
Assay of dissolved carbon in reclaimed water produced in spacecraft water supply systems N82-17838
BIOCHEMISTRY
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity [AD-A107673] N82-17842
Cytologic and biochemical genetic effects of chemical carcinogens [AD-A107615] N82-17864
Comparative biochemistry and metabolism. Part 1: Carcinogenesis [AD-A107614] N82-17865
BIODEGRADABILITY
Attenuation of polybrominated biphenyls and hexachlorobenzene by Earth materials [PB82-107558] N82-17663
BIOELECTRICITY
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861
BIOLOGICAL EFFECTS
USSR report: Space biology and aerospace medicine, vol. 15, no. 5, Sep. - Oct. 1981 [JPRS-79346] N82-17812
Effect of stationary magnetic field on the endocrine system N82-17814
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
USSR report: Life sciences effects of nonionizing electromagnetic radiation, no. 4 [JPRS-79760] N82-17844
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847
Effects on biological systems of electromagnetic oscillations in millimeter range of wavelengths N82-17849
Current problems of radiobiology of electromagnetic radiation of radio-frequency range N82-17850
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851
Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan N82-17852
Effect of hypogeomagnetic field on activity of some cerebral enzymes N82-17853
BIOLOGY
An airline view of the corrosion problem N82-17352
BIOMASS
ONR Tokyo scientific bulletin. Volume 6: Number 3, July to September 1981 [AD-A107649] N82-18118
BIOMASS ENERGY PRODUCTION
Land biomass program [PB82-117391] N82-17405
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B [DE82-000838] N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E [DE82-000839] N82-17631
BIOMEDICAL DATA
Status of space biomedical programs N82-17239
BIOSYNTHESIS
Rat amino acid composition after flight aboard Cosmos-1129 biosatellite N82-17831
BIPOLAR TRANSISTORS
A 10kW series resonant converter design, transistor characterization, and base-drive optimization [NASA-CR-165546] N82-17439
BIPOLARITY
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations [NASA-TM-83861] N82-18106
BIT SYNCHRONIZATION
A study of high density bit transition requirements versus the effects on BCH error correcting coding [NASA-CR-161957] N82-17884
BITUMENS
Rapid-rate bituminous coal gasification [PB82-115478] N82-17404
BIVARIATE ANALYSIS
A continuous shading scheme for two-variable mapping N82-17939
BLACK BODY RADIATION
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths [NASA-CR-168414] N82-18104
BLACK HOLES (ASTRONOMY)
Dust-like stages in the early universe and the restrictions on the primordial black hole spectrum [REPT-646] N82-18089
Electric charge in the Kruskal space-time and the Jeans conjecture [REPT-653] N82-18091
BLADE TIPS
Roll up model for rotor wake vortices, part 5 [ASRL-TR-194-4] N82-17127
BLANKETS (FUSION REACTORS)
On the relation between plasma and neutral gas profiles in a cold gas blanket system [TRITA-PFU-81-03] N82-18021
BLAST LOADS
Damage from High explosive (HE) projectiles N82-17164
Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter [NASA-CR-168411] N82-18095
BLOOD COAGULATION
Blood fibrinogen as related to immersion in water for seven days and short-term space flight N82-17836
Studies on structure and function relationship in fibrinogen N82-17859
BLOOD FLOW
The role of intestinal nerves in the nutriant induced intestinal hyperemia N82-17869
BLOOD PRESSURE
Jugular, right atrial pressure and cerebral hemodynamics of healthy man submitted to postural tests N82-17825
Portable medical status and treatment system [NASA-CR-167496] N82-17862
A model for essential hypertension: Metabolic studies N82-17867
BLOOD VESSELS
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
BODY-WING AND TAIL CONFIGURATIONS
Experimental trim drag values for conventional and supercritical wings [NASA-CR-168500] N82-17126
BOILERS
Promotion of utilizing primary energy and reduction of emission with grate-equipped heat generators fired completely automatic with solid fuels [BMFT-FB-T-81-222] N82-17391
Evaluation of alternatives in downhole steam generation [DE82-001943] N82-17574
BOILING WATER REACTORS
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions [VTT-88] N82-17340
BOLTS
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353
BOLTZMANN TRANSPORT EQUATION
Asymptotic behavior of the Boltzmann equation with infinite range forces [CTH-MATH-1981-18] N82-17930
BOMBER AIRCRAFT
Forecasting corrosion damage and maintenance costs for large aircraft N82-17357
Corrosion control measures for military aircraft: Present UK requirements and future developments N82-17358
Corrosion prevention methods developed from direct experience with aerospace structures N82-17359
BOMBING EQUIPMENT
Technology overview for advanced aircraft armament system program [AD-A107680] N82-17155
Standardization study for advanced aircraft armament system program [AD-A107681] N82-17156
BORN APPROXIMATION
Orbiting effects in the inelastic scattering of protons to the continuum [DE82-002287] N82-17980
BOSONS
Heavy Higgs bosons and their low energy impact N82-17967
BOUNDARY LAYER CONTROL
Experimental study of delta wing leading-edge devices for drag reduction at high lift --- conducted in Langley 7- by 10-foot high speed tunnel N82-17125
BOUNDARY LAYER FLOW
Investigation of a laminar two-component boundary layer along an evaporation liquid film by means of a finite difference method [ESA-TT-711] N82-17136
Three dimensional flow field inside compressor rotor, including blade boundary layers [NASA-CR-168410] N82-17175
Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187
Blade-to-blade computations and boundary layer corrections in axial compressors and turbines N82-17202
Streamwise vorticity decay downstream of a three dimensional protuberance [AD-A108080] N82-17486

BOUNDARY LAYER PLASMAS
The plasma ion composition in the high-latitude magnetospheric boundary layer according to Prognoz-7 data
[REPT-658] N82-17697

BOUNDARY LAYER STABILITY
Surveys of flow-field around empennage of the NAL STOL-research-aircraft model
[NAL-TR-677] N82-17124
Bifurcating instability of the free surface of a ferrofluid N82-17473

BOUNDARY LAYER TRANSITION
Turbulent boundary layer heat transfer experiments: Convex curvature effects including introduction and recovery
[NASA-CR-3510] N82-17456

BOUNDARY LAYERS
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600
Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

BOURDON TUBES
Tubing systems for the measurement of fluctuating pressures in wind engineering
[OUEL-1370/81] N82-17231

BOW WAVES
Three-dimensional shape and position of Venus's bow shock
[REPT-656] N82-18102
Interactions of comets with the solar wind and solar radiation N82-18103

BRAIN STEM
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans
N82-17860
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861

BRANCHING (MATHEMATICS)
Bifurcating instability of the free surface of a ferrofluid N82-17473
The stable pedigrees of critical branching populations
[CTH-MATH-1981-15] N82-17927

BRAZIL
Large horizontal electric fields measured at heights of the Brazilian magnetic anomaly and association to local energetic particle precipitation
[INPE-2120-RPE/344] N82-17712
The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064

BREAKING
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites
[NASA-CR-168421] N82-17267
Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114208] N82-17582

BRIGHTNESS TEMPERATURE
An optical model for the microwave properties of sea ice
[NASA-TM-83865] N82-17561
Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] N82-17563

BRINES
Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica
N82-17546
Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806

BRIQUETS
Briquetting of fine coal using a sodium chloride binder
[DE82-000632] N82-17395

BUCKLING
Inelastic buckling of columns of L and U cross section — calculated using a flow boundary formulation
[ESA-TT-709] N82-17544

BUFFER STORAGE
Queueing analysis of synchronous time division multiplexing with individual source buffering
[NASA-CR-168443] N82-17252

BULGARIA
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238

BULGING
Necking, fracture and localization of plastic flow in metals N82-17525

BUNCHING
Vertical coherent instabilities in bunched particle beams
[DE82-003246] N82-17979

BURMA
Climatic data of Asia and Western Pacific, its availability, network, and applications N82-17750

BURNERS
Influence of strain on flame propagation in laminar flow
[PB82-114568] N82-17322

BYPASSES
Effects of bearing/bypass load interaction on laminate strength
[AD-A108006] N82-17271

C

CABLES (ROPES)
Mechanical Engineering Department technical review
[DE82-000303] N82-17509

CADMIUM SELENIDES
Luminescent photoelectrochemical cells. 6: Spatial aspects of the photoluminescence and of cadmium selenide electrodes
[AD-A107580] N82-17310
Luminescent photoelectrochemical cells. 7: Photoluminescent and electroluminescent properties of cadmium sulfo-selenide electrodes
[AD-A107581] N82-17311

CALCIUM
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations
N82-17732
Some mechanisms of calcium transport by the cardiac sarcolemma N82-17810

CALCIUM ISOTOPES
Elastic and inelastic scattering of 800 MeV/c K+/- mesons from carbon-12 and calcium-40 N82-17991

CALCIUM METABOLISM
Regulation of calcium current and calicum activity in heart cells N82-17870

CALCIUM OXIDES
Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410

CALCULUS OF VARIATIONS
Multigrid methods for differential eigenvalue and variational problems and multigrid simulation
N82-17934

CALIBRATING
The construction of a neutral molecular beam facility and its application to mass spectrometers carried on space vehicles N82-17244
Calibration of pyroelectric radiometers for infrared flare measurements
[AD-A107648] N82-17481
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-168442] N82-17610

CANADA
Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114208] N82-17582

CANCER
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864
Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865

CANONICAL FORMS
Canonical quantization of non-abelian gauge theories N82-17963

CAP CLOUDS
Meteorological settings associated with significant convective storms in Colorado
[PB82-106238] N82-17795

CARBOHYDRATE METABOLISM
Activity of some enzymes of carbonhydrate metabolism in rat skeletal muscles after space flight
N82-17834
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846

CARBON
High efficiency lithium-thionyl chloride cell
[AD-A107949] N82-17442
Assay of dissolved carbon in reclaimed water produced in spacecraft water supply systems
N82-17838

CARBON CYCLE
Develop solar fuels and chemicals technology and perform supporting systems analysis
[DE81-023960] N82-17318
Increase of atmospheric CO2 and possible climatic changes N82-17763

CARBON DIOXIDE
Develop solar fuels and chemicals technology and perform supporting systems analysis
[DE81-023960] N82-17318
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] N82-17576
The World Climate Program N82-17748
Increase of atmospheric CO2 and possible climatic changes N82-17763

CARBON DIOXIDE LASERS
Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation
N82-17297
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh
[AD-A107939] N82-17491
A 16 muon CO2 bending mode laser system
[DE81-030123] N82-17496
Investigation of D2O laser emission at 50, 66, 83, 111, and 116 microns
[IPF-81-6] N82-17502
Measurement of heavy ion components in a hydrogen plasma by CO2 laser scattering with coherent detection
[IPF-81-5] N82-18024

CARBON FIBER REINFORCED PLASTICS
The ultrasonic inspection of C.F.C. — carbon fiber sine wave spars
[MDR-0465] N82-17513
Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-108] N82-17526

CARBON ISOTOPES
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh
[AD-A107939] N82-17491

CARBON MONOXIDE
Mossbauer studies on partially oriented samples of carbon monoxymyoglobin and photodissociated carbon monoxymyoglobin N82-18036

CARBON MONOXIDE POISONING
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

CARBON STEELS
Variable amplitude corrosion fatigue behavior of a low carbon steel N82-17347

CARBON 12
Elastic and inelastic scattering of 800 MeV/c K+/- mesons from carbon-12 and calcium-40 N82-17991

CARBON 14
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600

CARBONACEOUS MATERIALS
Briquetting of fine coal using a sodium chloride binder
[DE82-000632] N82-17395

CARBONACEOUS ROCKS
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] N82-17576
The characterization and evolution of carbonate tidal deltas, upper Florida Keys N82-17796

CARBONATES
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations
N82-17732
The characterization and evolution of carbonate tidal deltas, upper Florida Keys N82-17796

CARBONYL COMPOUNDS
The chemistry and detection of nickel carbonyl
N82-17278

CARCINOGENS
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864
Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865

CARDIAC VENTRICLES
Regulation of calcium current and calicum activity in heart cells N82-17870

CARDIOGRAPHY
Informativeness of ultrasonic Doppler cardiography in evaluation of coronary circulation N82-17828

CARDIOVASCULAR SYSTEM
Cardiac output and cardiac cycle phase structure of pilots during flights N82-17821
Effects of ambient parameters on man
N82-17826
Age related distinctions of cosmonauts regional hemodynamics N82-17829

CARGO
Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

CASCADE CONTROL
A discrete-time multivariable criterion for limit cycle predictions
[OUEL-1369/81] N82-17902

CASCADE FLOW
Correlation for secondary flows and clearance effects N82-17189
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190
Program FINSUP: Steady and unsteady supersonic flow in cascades by a finite element method
[PB82-114612] N82-17472

CATALOGS (PUBLICATIONS)
NASA's University Program: Active projects, fiscal year 1981
[NASA-TM-84416] N82-18055
Publications of the National Bureau of Standards 1980 catalog: A compilation of abstracts and key words and author indexes
[PB82-104688] N82-18062

CATALYSIS
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] N82-17315

CATALYSTS
Coal-liquefaction catalyst development
[DE82-000137] N82-17314
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] N82-17315
Investigation of oxide bound transition metal complexes N82-17334

CATALYTIC ACTIVITY
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030649] N82-17402
An oxygen electrode based on nickel/cobalt spinel
[AD-A107602] N82-17443

CATIONS
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295

CAVITY RESONATORS
Cavity lifetime phase-shift method for sensitive reflectance measurements at mid-infrared wavelengths
[ATR-82(8448)-1] N82-17423

CELESTIAL MECHANICS
Material on the dynamics of Earth-Moon systems: Planetary libration, fundamentals
[MITT-155] N82-18098

CELLS (BIOLOGY)
Some mechanisms of calcium transport by the cardiac sarcolemma N82-17810

CELLULOSE
Development of methods for the stabilization of pyrolytic oils
[PB82-106150] N82-17321

CELLULOSE NITRATE
Effects on solid-state reactions during thermal decomposition of nitrocellulose — rocket propellant
[DRIC-T-6460] N82-17390

CEMENTATION
Deposition and diagenesis of Glauconite Sandstone, Berrymore-Lobstick-Bigoray area, South Central Alberta: A study of physical chemistry of cementation N82-17703

CENSORED DATA (MATHEMATICS)
A method of nonparametric survival analysis for doubly censored data N82-17938

CENTAUR LAUNCH VEHICLE
Preliminary Centaur systems analysis
[NASA-CR-167499] N82-17424

CENTRAL AFRICAN REPUBLIC
Gravity maps of Central Africa N82-17557
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
Seismic study of the Bangui anomaly N82-17559

CENTRIFUGAL FORCE
Fling-off cooling of straight spur gears — oil cooling of the meshing zone
[WTHD-136] N82-17510

CERAMIC BONDING
Review of NASA progress in thermal barrier coatings for stationary gas turbines
[NASA-TM-81716] N82-17335

CERAMIC COATINGS
Review of NASA progress in thermal barrier coatings for stationary gas turbines
[NASA-TM-81716] N82-17335

CERAMICS
Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature
[NAL-TR-678] N82-17368
Defect detection and identification in Si3N4 and SiC using controlled reluctance electromagnetic test methods
[AD-A107726] N82-17369
Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity
[AD-A107617] N82-17371
Stress corrosion of ceramic materials
[AD-A108045] N82-17380

CEREBRAL CORTEX
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

CEREBRUM
Cerebral hemispheric activity and automonic nervous function N82-17868

CESIUM
Magnetic circular dichroism and Faraday rotation of cesium-argon excimers and cesium dimers
N82-18030

CH-47 HELICOPTER
Natural and HISS cloud droplet data as sampled during the 1980 - 1981 AEFA/Saint Paul field program
[AD-A107577] N82-17784

CHANNEL FLOW
Formation constant and photolabeling of gramicidin channels in lipid bilayer membranes N82-17277

CHANNELS (DATA TRANSMISSION)
Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086
Practical aspects which apply to MIL-STD-1553B data networks — avionics and weapons delivery
N82-17111
The traffic flow in a distributed real time computing system (RDC-SYSTEM) with a fiber-optic ringbus system N82-17112
Next generation military aircraft will require hierarchical/multilevel information transfer systems — packet switching N82-17114
Multiple-access channels with different generalized feedback signals
[INPE-2221-PRE/017] N82-17421

CHARACTER RECOGNITION
Legibility of characters with different segmentations and colors N82-17486

CHARGE DISTRIBUTION
Applications of nuclear quadrupole double resonance spectroscopy N82-17287
Long range intermolecular potentials from static form factors N82-17975

CHARGE EFFICIENCY
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] N82-18066

CHARGE EXCHANGE
Application of eikonal approximation to charge transfer in energetic ion-atom collisions N82-17986

CHARGE TRANSFER
Luminescent photoelectrochemical cells. 6: Spatial aspects of the photoluminescence and of cadmium selenide electrodes
[AD-A107580] N82-17310

CHARGED PARTICLES
Induced luminescence by charged particles on gaseous, liquid and solid argon
[CRN-CPR-80-10] N82-17316
Acoustic detection of high energy particles
N82-17966

CHARPY IMPACT TEST
Dynamic elastic-plastic characterization of nuclear pressure vessel material
[CISE-1693] N82-17528

CHARRING
Effects of preignition on pulverized-coal combustion
[DE82-002565] N82-17313

CHASSIS
Initial interface standards for rapid transit car subsystem components
[PB82-104704] N82-18074

CHECKOUT
Built-in-test Equipment Requirements Workshop. Workshop presentation
[AD-A107842] N82-17085
State-of-the-art computer monitoring equipment
N82-17116
F/A-18 weapons system support facilities
N82-17120

CHEMICAL ANALYSIS
Modeling chemical systems to improve analytical response N82-17283
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317
Development of methods for the stabilization of pyrolytic oils
[PB82-106150] N82-17321
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations
N82-17732
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] N82-18068

CHEMICAL AUXILIARY POWER UNITS
Safety design considerations for lithium batteries in CF applications
[AD-A107619] N82-17626

CHEMICAL BONDS
The structural formation and physical behaviour of cross-linked epoxy resins
[RAE-LIB-TRANS-2067] N82-17268
Applications of nuclear quadrupole double resonance spectroscopy N82-17287
The structural consequences of transition metal basicity: Investigation of various gold complexes
N82-17332
Investigation of oxide bound transition metal complexes N82-17334

CHEMICAL CLEANING
Removing water-soluble hazardous material spills from waterways with carbon
[PB82-103613] N82-17661
CHEMICAL COMPOSITION
Effects of surface morphology and chemical composition on the durability of adhesively bonded aluminum structures
[AD-A107664] N82-17373
Chemical fluctuations and incoherent scattering theory in the terrestrial D region
[AERONOMICA-ACTA-A-233-1981] N82-17704
CHEMICAL COMPOUNDS
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864
CHEMICAL ENERGY
Unimolecular isomerization dynamics and instabilities: RRKM theory N82-17291
CHEMICAL EQUILIBRIUM
Angle-resolved photoemission study of Co-Co (0001)
[AD-A107575] N82-17304
CHEMICAL LASERS
Molecular interactions with Many-Body Perturbation Theory
[AD-A107616] N82-17494
Measurement of fluorine atom concentrations and reaction rates in chemical laser systems
[AD-A108072] N82-17495
CHEMICAL REACTION CONTROL
An automated reagent preparation system for fast reaction-rate analyses N82-17273
CHEMICAL REACTIONS
Picosecond studies of solvent-solute interactions N82-17290
Development of W-Ta generator
[NASA-CR-167477] N82-17300
CHEMICAL REACTORS
An automated reagent preparation system for fast reaction-rate analyses N82-17273
Rapid-rate bituminous coal gasification
[PB82-115478] N82-17404
The iterative solution of a non-linear Fredholm integral equation arising from a chemical reactor problem
[MATHS-RES-156] N82-17924
CHEMILUMINESCENCE
Singlet-delta molecular oxygen as a tool for selective chemiluminescent detection in chromatography N82-17285
CHEMISTRY
The geochemistry of sulfur and carbon in basaltic melts N82-17734
CHESAPEAKE BAY (US)
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17796
CHIRP SIGNALS
Enhancement of poles in spectral analysis
[AD-A107739] N82-17432
CHLORINE
The electrochemical and spectrophotometric determination of free and combined chlorine N82-17292
Determination of volatile organics in industrial and municipal wastewaters
[PB82-119090] N82-17320
CHLORINE COMPOUNDS
The electrochemical and spectrophotometric determination of free and combined chlorine N82-17292
Comparative evaluation of antimicrobial activity of some urine preservatives N82-17830
CHLOROPHYLLS
The structure and function of chlorophyll-proteins in photosystem 1 and the light harvesting complex of photosystem 2 N82-17811
CHROMATOGRAPHY
Deconvolution of chromatograms
[AD-A107608] N82-17309
A model for essential hypertension: Metabolic studies N82-17867
CIRCUIT PROTECTION
Evaluation of control and protection circuits
[PB82-105065] N82-17450
CIRCUIT RELIABILITY
State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83676] N82-17440
CIRCUITS
State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83676] N82-17440
Evaluation of control and protection circuits
[PB82-105065] N82-17450
CIVIL AVIATION
Census of US Civil aircraft, calender year 1980
[AD-A108675] N82-17084
Assessment of historical and projected segments of US and World civil and military rotorcraft markets 1960 - 1990
[NASA-CR-166151] N82-17137
Development test programs adapted to helicopter engines N82-17205
CLAMPS
The application of mechanical clamps to Portsmouth connectors
[AD-A107632] N82-17505
Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-108] N82-17526
CLASSIFICATIONS
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
CLAYS
Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596
CLEANERS
Performance testing of the DiPerna sweeper
[PB82-109174] N82-17666
CLEARANCES
Correlation for secondary flows and clearance effects N82-17189
CLIFFS
Rates and implications of bluff recession along the Lake Michigan shorezone of Michigan and Wisconsin N82-17548
CLIMATE
Energy transport within the Earth's atmosphere ocean system from a climate point of view N82-17729
Investigation of models for large scale meteorological prediction experiments
[NASA-CR-168415] N82-17744
Proceedings of the Technical Conference on Climate: Asia and Western Pacific
[WMO-578] N82-17747
The World Climate Program N82-17748
Development of a global system for acquiring and processing climatological data N82-17749
Climatic data of Asia and Western Pacific, its availability, network, and applications N82-17750
Climate modeling N82-17754
The nature and scope of climate applications N82-17757
Climate, climate data, and water resources N82-17758
Climatic change and social disturbance N82-17773
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774
Change of global climate during recent 100 years N82-17775
Further studies on the climatic change during historical times in China N82-17776
Regionality of climatic change in monsoon Asia N82-17777
Stochastic aspects of climatic transitions: Response to periodic forcing
[AERONOMICA-ACTA-A-234-1981] N82-17904
CLIMATOLOGY
Report of the second session of the Joint Scientific Committee N82-17720
Climatic influences of residential energy consumption N82-17742
Climate applications to agricultural problems N82-17759
The stability of yields in Shanghai and the climatic conditions N82-17761
Food crises and famines: The UNRISD food systems approach N82-17762
Increase of atmospheric CO2 and possible climatic changes N82-17763
Energy and climate in South-East Asia and the Western Pacific N82-17764
Applications of climate information and the United States National Climate Program N82-17765
Study of climate and its applied aspects N82-17766
The provision of climatic information for agriculture in the USSR N82-17767
On possible impacts of climatic variations on agriculture in China N82-17768
Climate circulation processes in South-East Asia during winter monsoon N82-17769
Ocean's role in processes of short-range climatic variation formation N82-17779
Ocean influence on climate formation and changes N82-17780
The impacts of climatic change on human society N82-17781
Effect of climate on the development of natural resources in Asia N82-17782
Improving the science of climate impact study N82-17783
CLOSED ECOLOGICAL SYSTEMS
Assay of dissolved carbon in reclaimed water produced in spacecraft water supply systems N82-17838
CLOUD COVER
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699
CLOUD HEIGHT INDICATORS
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699
CLOUD PHYSICS
A comparison of in-cloud HCl concentrations from the NASA/MSFC MDM to measurements for the space shuttle launch
[NASA-CR-167497] N82-17653
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699
CLOUDS
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699
CLOUDS (METEOROLOGY)
Meteorological products and some applications of Global Meteorological Satellite (GMS) data N82-17751
CLUMPS
Symmetry and multiple electromagnetic scattering by a cluster of spheres
[AD-A108118] N82-17428
COAGULATION
Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843
COAL
Effects of preignition on pulverized-coal combustion
[DE82-002565] N82-17313
Rapid-rate bituminous coal gasification
[PB82-115478] N82-17404
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] N82-17455
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] N82-17554
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555
Development of sensitized pick coal interface detector system
[NASA-CR-161961] N82-17560
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] N82-17565

Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] N82-17603
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696
Geology and geochemistry of sphalerite in coal
N82-17702

COAL DERIVED LIQUIDS
Hydrogen bonding in asphaltenes and coal liquids
[DE82-001131] N82-17312
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] N82-17315
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396
Synfuel modified diesel
[DE82-002298] N82-17400
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402

COAL GASIFICATION
Microstructural effects in abrasive wear
[DE82-003653] N82-17339
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] N82-17398
Rapid-rate bituminous coal gasification
[PB82-115478] N82-17404

COAL LIQUEFACTION
Coal-liquefaction catalyst development
[DE82-000137] N82-17314
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] N82-17315
H-coal process improvement studv: Bench-unit baseline run with preheater/reactor
[DE82-002572] N82-17399
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900663] N82-17506

COAL UTILIZATION
Promotion of utilizing primary energy and reduction of emission with grate-equipped heat generators fired completely automatic with solid fuels
[BMFT-FB-T-81-222] N82-17391

COASTAL ECOLOGY
Connecticut Coastal River basins overview: Public review draft
[PB82-105925] N82-17590

COASTAL PLAINS
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan N82-17753

COASTAL WATER
Connecticut Coastal River basins overview: Public review draft
[PB82-105925] N82-17590

COATINGS
Optical thin film coatings
[AD-A107808] N82-18001

COAXIAL CABLES
Impedance matching for long cables carrying ultrasonic signals
[AD-A107935] N82-17444

COAXIAL FLOW
Shielded balanced and coaxial transmission lines. Parametric measurements and instrumentation relevent to signal waveform transmission in digital service
[PB82-105297] N82-17438

COBALT OXIDES
An oxygen electrode based on nickel/cobalt spinel
[AD-A107602] N82-17443

COBALT 60
Total-dose radiation effects data for semiconductor devices, volume 2
[NASA-CR-168428] N82-17254

COCKS
Surveys of flow-field around empennage of the NAL STOL-research-aircraft model
[NAL-TR-677] N82-17124

CODING
A consistant approach to the development of system requirements and software design N82-17099
A PEARL software system for multi-processor systems N82-17100
A survey of standardization efforts of coded character sets for text processing
[PB82-105891] N82-18061

COEFFICIENT OF FRICTION
Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521

COHERENT ELECTROMAGNETIC RADIATION
An investigation of variable coherence sources and of some practical applications
[AD-A107715] N82-17999

COHERENT LIGHT
Measurement of heavy ion components in a hydrogen plasma by CO2 laser scattering with coherent detection
[IPF-81-5] N82-18024

COHERENT RADIATION
Vertical coherent instabilities in bunched particle beams
[DE82-003246] N82-17979

COLD FLOW TESTS
The two stage aero engine turbine N82-17183

COLD GAS
On the relation between plasma and neutral gas profiles in a cold gas blanket system
[TRITA-PFU-81-03] N82-18021

COLD WEATHER
The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746

COLD WORKING
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions
[VTT-88] N82-17340

COLLIMATION
QD: A quartz declinometer of classic type --- quartz fiber suspension
[DMI-GEOPHYS-PAPERS-R-65] N82-17479

COLLIMATORS
Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora N82-17700

COLLINEARITY
Direction and collinearity factors in growth curve models and other problems in discriminant analysis
N82-17947

COLLISION AVOIDANCE
Active beacon collision avoidance logic evaluation. Volume 2: Collision avoidance (BCAS) threat phase
[AD-A107805] N82-17148

COLLISION PARAMETERS
Asymptotic behavior of the Boltzmann equation with infinite range forces
[CTH-MATH-1981-18] N82-17930

COLOR VISION
Legibility of characters with different segmentations and colors N82-17486

COLORADO
Meteorological settings associated with significant convective storms in Colorado
[PB82-106238] N82-17795

COLUMNS (SUPPORTS)
Inelastic buckling of columns of L and U cross section --- calculated using a flow boundary formulation
[ESA-TT-709] N82-17544

COMBINATORIAL ANALYSIS
Combinatorial maps N82-17954

COMBINED STRESS
Stress intensity for interacting flaws. Part 3: Photoelastic determination of mixed modes; stress intensity factors for interacting flaws
[OUEL-1368/81-PT-3] N82-17542

COMBUSTION
Asymptotic methods especially in combustion
[AD-A108023] N82-17308

COMBUSTION CHAMBERS
Control of particulate emissions from atmospheric fluidized-bed combustion with fabric filters and electrostatic precipitators
[PB82-115528] N82-17683

COMBUSTION CONTROL
Multi-fuel low-NOx burner development, phase 2
[PB82-115494] N82-17687

COMBUSTION EFFICIENCY
Multi-fuel low-NOx burner development, phase 2
[PB82-115494] N82-17687

COMBUSTION PHYSICS
Asymptotic methods especially in combustion
[AD-A108023] N82-17308
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396

COMBUSTION PRODUCTS
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317

COMBUSTION STABILITY
Multi-fuel low-NOx burner development, phase 2
[PB82-115494] N82-17687

COMETARY ATMOSPHERES
Interactions of comets with the solar wind and solar radiation N82-18103

COMETS
Comets, interstellar molecules and the origin of life
[PB82-104274] N82-18108

COMFORT
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871

COMMAND AND CONTROL
A measure of effectiveness: Analysis and application --- information completion measure for communication networks
[AD-A107886] N82-17434

COMMERCE
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-108440] N82-17666
NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069

COMMERCIAL AIRCRAFT
Census of US Civil aircraft, calender year 1980
[AD-A106675] N82-17084
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
Aircraft Corrosion
[AGARD-CP-315] N82-17349

COMMERCIAL ENERGY
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] N82-17603

COMMODITIES
Minerals yearbook, 1978-79. Volume 2: Area reports, Domestic
[PB82-105248] N82-17598

COMMUNICATION NETWORKS
Generalized polling algorithms for distributed systems N82-17103
Multiple-access channels with different generalized feedback signals
[INPE-2221-PRE/017] N82-17421
A very high throughput NETWORK: The ESCALIBUR project
[ENST-D-81004] N82-17426
A measure of effectiveness: Analysis and application --- information completion measure for communication networks
[AD-A107886] N82-17434

COMMUNICATION SATELLITES
Cross-impact study of foreign satellite communications on NASA's 30/20 GHz program
[NASA-CR-165154] N82-17420

COMMUTATION
Commutated automatic gain control system
[NASA-CR-168440] N82-17140

COMMUTATORS
Electric and hybrid vehicle program
[DE82-000904] N82-18072

COMPATIBILITY
Engine/drive/airframe compatibility: A way of life
N82-17220

COMPILERS
An operator-priority grammar for ALGOL 68 plus
[MC-IW-173/81] N82-17893

COMPLETENESS
Another proof for the completeness of a rule for the fair termination of guarded commands and another rule for their just termination
[MC-IW-178/81] N82-17922

COMPLEX COMPOUNDS
One-electron mechanisms in organometallic chemistry N82-17262
Planar, square-pyramidal and macrocyclic transition metal complexes prepared from linear tetradentate diaminediphosphine ligands N82-17330
Investigation of oxide bound transition metal complexes N82-17334
Nuclear magnetic resonance studies of transition metal complexes N82-17972

COMPLEX VARIABLES
Complex root-finding program with application to the dispersion relation of waves propagating in a fluid loaded plate
[AD-A107631] N82-17907
Approximation by a sum of complex exponentials utilizing the pencil of function method
[AD-A107742] N82-17913
On the contractivity of a complex Runge-Kutta scheme
[MC-NW-112/81] N82-17920

COMPONENT RELIABILITY
Corrosion control test method for avionic components
[AD-A108061] N82-17171
Component research for future propulsion systems N82-17224

COMPOSITE MATERIALS
PATCHES-3. User's manual
[AD-A107709] N82-17530

COMPOSITE STRUCTURES
PATCHES-3. User's guide for involute composites
[AD-A107750] N82-17260
Performance of PTFE-lined composite journal bearings
[NASA-TM-82779] N82-17263

COMPRESSION WAVES
An application of ray theory to the investigation of seismic head wave post-Pn phases N82-17736

COMPRESSIVE STRENGTH
Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity
[AD-A107617] N82-17371

COMPRESSOR BLADES
Three dimensional flow field inside compressor rotor, including blade boundary layers
[NASA-CR-168410] N82-17175
Survey on diffusion factors and profile losses N82-17186
Survey on the effect of blade surface roughness on compressor performance N82-17191
Deviation/turning angle correlations N82-17193
BBC/Sulzer. 4 stage transonic compressor N82-17197
Evaluation of profile loss predictions based on diffusion factors N82-17200

COMPRESSOR EFFICIENCY
End-wall boundary layer calculation methods N82-17188
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190
Survey on the effect of blade surface roughness on compressor performance N82-17191
BBC/Sulzer. 4 stage transonic compressor N82-17197
Evaluation of profile loss predictions based on diffusion factors N82-17200

COMPRESSORS
Study of air compressor hazards in underground and surface mines
[PB82-105164] N82-17597

COMPUTATION
The through flow calculations N82-17199
Blade-to-blade computations and boundary layer corrections in axial compressors and turbines N82-17202
NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916

COMPUTATIONAL FLUID DYNAMICS
Finite difference computation of the conical flow field over a delta wing
[VKI-TN-140] N82-17135
Through flow calculations in axial turbomachines
[AGARD-AR-175] N82-17178
Influence of correlations and computational methods on the prediction of overall efficiency N82-17180
The two stage aero engine turbine N82-17183
Survey on diffusion factors and profile losses N82-17186
Comparison of rezone algorithms for incompressible fluid flow calculations
[LOG-J12823] N82-17452
A general purpose computer program for multidimensional one and two phase flow
[NTS/81/11] N82-17458
Method for calculating three-dimensional flow in bladed turbomachine by using arbitary quasi perpendicular intersecting planes
[AD-A108475] N82-17467
Complex root-finding program with application to the dispersion relation of waves propagating in a fluid loaded plate
[AD-A107631] N82-17907
Application of multigrid methods for integral equations to two problems from fluid dynamics
[MC-NW-111/81] N82-17919

COMPUTER ASSISTED INSTRUCTION
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

COMPUTER GRAPHICS
Development of a computer based presentation of non-steady helicopter rotor flows
[AD-A108107] N82-17131
User's guide for SKETCH
[NASA-TM-81369] N82-17876
Shaded computer graphic techniques for visualizing and interpreting analytic fluid flow models
[NASA-CR-168418] N82-17880
Computer interpretation of a dynamic image from a moving vehicle
[AD-A107565] N82-17885
Terrain model animation
[AD-A107911] N82-17887
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17888
Implementation of a display routine for coded map data bases
[FOA-C-30241-E] N82-18059

COMPUTER NETWORKS
Performance study of a distributed microprocessor architecture for use aboard military aircraft N82-17090
Experiences with the experimental FFM-MCS N82-17094
Distributed and decentralized control in fully distributed processing systems N82-17101
Generalized polling algorithms for distributed systems N82-17103
Reconfiguration: A method to improve systems realiability N82-17107
A reconfigurable change network for distributed process control N82-17108
Protocol level modules for cost effective standard computer communication N82-17109
Dispersed sensor processing mesh project---avionics N82-17113
SIFT: An ultra-reliable avionic computing system N82-17115
Mirage 2000 weapons systems architecture N82-17118
F/A-18A tactical airborne computational subsystem N82-17119
A very high throughput NETWORK: The ESCALIBUR project
[ENST-D-81004] N82-17426
Routing in networks
[AD-A107841] N82-17895
Introduction to the central Scientific Computing Facilities
[DE82-003258] N82-17896
CQNA: Closed queusing network analyzer
[FUB-48-1980] N82-17900

COMPUTER PROGRAMMING
Distributed and decentralized control in fully distributed processing systems N82-17101
An operator-priority grammar for ALGOL 68 plus
[MC-IW-173/81] N82-17893

COMPUTER PROGRAMS
SAVANT: A database manipulation technique for system architecture design verification and analysis N82-17095
Functional documentation. A practical aid to the orderly solution of the system design problem N82-17096
A consistent approach to the development of system requirements and software design N82-17099
A PEARL software system for multi-processor systems N82-17100
Function specifications for the A-7E Function Driver module
[AD-A107922] N82-17173
Results of calculations N82-17198
WKB mode summing program for dipole antennas of arbitrary orientation and elevation for VLF/LF propagation. Calculation of VLF/LF field strengths in the earth-ionosphere waveguide
[AD-A107683] N82-17435
A general purpose computer program for multidimensional one and two phase flow
[NTS/81/11] N82-17458
Implementation of anisotropic and nonlinear thermal stress models in ADINA 78
[AD-A108085] N82-17529
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] N82-17631
Investigation and evaluation of a computer program to minimize three-dimensional flight time tracks
[NASA-CR-168419] N82-17879
Computer science and technology: An assessment and forecast of ADP in the Federal government
[PB82-116112] N82-17883
Computer interpretation of a dynamic image from a moving vehicle
[AD-A107565] N82-17885
Two-channel linear-predictive spectral analysis: Program for the HP 9845 desk calculator
[AD-A107634] N82-17889
Introduction to the central Scientific Computing Facilities
[DE82-003258] N82-17896
Model calculations of the tearing instability associated with ac-modulation of the plasma-current in Tokamaks
[IPP-6/198] N82-18013
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054
Order: A program package for information on management of staff activities and expenditures
[EUR-7442-EN] N82-18056

COMPUTER SYSTEMS DESIGN
Distributed data processing: What is it? N82-17087
The effect of increasingly more complex aircraft and avionics on the method of system design N82-17088
Continuous reconfiguration in a multi-microprocessor flight control system N82-17093
Stage-state reliability analysis technique N82-17104
Digital Avionics Information System (DAIS) documentation
[AD-A108000] N82-17172
State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83876] N82-17440

COMPUTER SYSTEMS PERFORMANCE
Distributed data processing: What is it? N82-17087
Performance study of a distributed microprocessor architecture for use aboard military aircraft N82-17090

COMPUTER SYSTEMS PROGRAMS
A consistent approach to the development of system requirements and software design N82-17099

Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106
The cluster approach to the magnetic susceptibilities of low-dimensional copper clusters N82-17333

COMPUTER SYSTEMS SIMULATION
Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105

COMPUTER TECHNIQUES
A consistent approach to the development of system requirements and software design N82-17099
Expected use of micro-based network analysis [AD-A107660] N82-18057
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE) [INPE-2137-RPE/360] N82-18064

COMPUTERIZED DESIGN
Parallel computation for developing nonlinear control procedures [AD-A107914] N82-17227
Tubing systems for the measurement of fluctuating pressures in wind engineering [OUEL-1370/81] N82-17231
Advanced space system analysis software. Technical, user, and programmer guide [NASA-CR-165798] N82-17256
PATCHES-3. User's guide for involute composites [AD-A107750] N82-17260
Prospects for materials (plastics, elastomers, paints). Volume 3: Plastic materials (appendix 3, computer assisted design approach to injection molds) [CETIM-12-B-194-VOL-3] N82-17384

COMPUTERIZED SIMULATION
A simple hybrid visual simulation for research flight simulators [ESA-TT-690] N82-17232
Simulation of ice-cover growth and thermal decay on the upper St. Lawrence River N82-17550
Investigation of models for large scale meteorological prediction experiments [NASA-CR-168415] N82-17744
Climate modeling N82-17754
Computer interpretation of a dynamic image from a moving vehicle [AD-A107565] N82-17885
Terrain model animation [AD-A107911] N82-17887
Theoretical basic for CTABS80: A computer program for three-dimensional analysis of building systems [AD-A107635] N82-17890
Controller design for unknown multivariable systems using monotone modeling errors [RR-144] N82-17899
Multigrid methods for differential eigenvalue and variational problems and multigrid simulation N82 17934

COMPUTERS
Computer science and technology: An assessment and forecast of ADP in the Federal government [PB82-116112] N82-17883
Introduction to the central Scientific Computing Facilities [DE82-003258] N82-17896

CONCRETES
Groove depth requirements for tine-textured rigid pavement 5: Durability of tine texturing on PCC pavements [PB82-104951] N82-17413
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models [PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study [PB82-112913] N82-17415

CONDENSERS
Uniaxial model for a gas loaded variable conductance heat pipe [NLR-TR-80048-U] N82-17462
An improved flat front model for a gas loaded variable conductance heat pipe [NLR-TR-80049-U] N82-17463

CONDENSING
Modification of spill factors affecting air pollution. Volume 1: An evaluation of cooling as a vapor mitigation procedure for spilled volatile chemicals [PB82-108382] N82-17657

CONDITIONED REFLEXES
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851

CONDUCTIVE HEAT TRANSFER
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 1: Theoretical aspects [EUR-7427/I-EN-VOL-1] N82-17460
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 2: User's manual [EUR-7427/II-EN-VOL-2] N82-17461
Uniaxial model for a gas loaded variable conductance heat pipe [NLR-TR-80048-U] N82-17462
An improved flat front model for a gas loaded variable conductance heat pipe [NLR-TR-80049-U] N82-17463

CONES
Dual convex cones of order restrictions with applications [AD-A108126] N82-17908

CONFERENCES
Proceedings of the Tenth Biennial Guidance Test Symposium, Volume 1 [AD-A107612] N82-17147
Corrosion Fatigue --- conferences [AGARD-CP-316] N82-17342
Aircraft Corrosion [AGARD-CP-315] N82-17349
Sixth International Conference on Noise in Physical Systems [PB82-105305] N82-17449
Report of the second session of the Joint Scientific Committee N82-17720
Report of the third session of the West African Monsoon Experiment (WAMEX) scientific regional committee --- conference proceedings, 10-14 Nov. 1980 [GARP-SPEC-REPT-37] N82-17721
Proceedings of the Technical Conference on Climate: Asia and Western Pacific [WMO-578] N82-17747
DOT/FAA Human Factors Workshop on Aviation. Transcript, vol 1 [AD-A107802] N82-17876
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2 [AD-A107803] N82-17877
Training of information specialists [PB82-103227] N82-18063

CONGRESSIONAL REPORTS
Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1981 [PUB-LAW-96-526] N82-18065

CONICAL FLOW
Finite difference computation of the conical flow field over a delta wing [VKI-TN-140] N82-17135

CONICS
Dual convex cones of order restrictions with applications [AD-A108126] N82-17908

CONNECTICUT
Connecticut Coastal River basins overview: Public review draft [PB82-105925] N82-17590

CONNECTORS
The application of mechanical clamps to Portsmouth connectors [AD-A107632] N82-17505

CONSERVATION EQUATIONS
Fluid-structure coupling in Lagrange-Lagrange and Euler-Lagrange descriptions [EUR-7424-EN] N82-17952

CONSTANTS
Mechanistic studies on the extraction of copper(11) by hydrophobic reagents N82-17327

CONSTRUCTION
Limit state design in geotechnical engineering [PB82-113440] N82-17418
Community solar demonstration/dissemination center [DE82-000994] N82-17632
Theoretical basic for CTABS80: A computer program for three-dimensional analysis of building systems [AD-A107635] N82-17890

CONSTRUCTION INDUSTRY
Corrosion fatigue of offshore and ship-building steels N82-17346

CONTAMINANTS
Determination of volatile organics in industrial and municipal wastewaters [PB82-119090] N82-17320

CONTEXT FREE LANGUAGES
An underlying context-free grammar of ALGOL 68 plus [MC-IW-171/81] N82-17891

CONTINENTAL SHELVES
Tidal variability in the current and temperature fields on the Southern California continental shelf N82-17797
Procedures for preparing regional transportation management plans --- oil and gas pipelines from outer continental shelves [PB82-106162] N82-18075

CONTINGENCY
Hypothesis testing in contingency tables with small samples N82-17946

CONTINUUM FLOW
Orbiting effects in the inelastic scattering of protons to the continuum [DE82-002287] N82-17980

CONTINUUM MECHANICS
A correction to the engineering theory of elastic stability [OUEL-1376/81] N82-17540

CONTROL
Evaluation of control and protection circuits [PB82-105065] N82-17450

CONTROL EQUIPMENT
Design, fabrication, and evaluation of a spiral-flow letdown valve [DE82-900863] N82-17508

CONTROL THEORY
Distributed and decentralized control in fully distributed processing systems N82-17101
Parallel computation for developing nonlinear control procedures [AD-A107914] N82-17227
Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245
Time domain identification of an optimal control pilot model with emphasis on the objective function [NASA-CR-168487] N82-17874
Controller design for unknown multivariable systems using monotone modeling errors [RR-144] N82-17899
Person-by-person optimal solution to the decentralised LQG stochastic control problem with control sharing information pattern [PB82-113457] N82-17944

CONTROL VALVES
Design, fabrication, and evaluation of a spiral-flow letdown valve [DE82-900863] N82-17508

CONTROLLABILITY
Stiffness degradation of impact damaged structure N82-17168

CONTROLLED FUSION
Electron cyclotron resonance heating of tandem mirrors at relativistic energies [AD-A107944] N82-18018

CONTROLLERS
An investigation of multi-axis isometric side-arm controllers in a variable stability helicopter [AD-A106759] N82-17226
Control system design for the large space systems technology reference platform [NASA-CR-168426] N82-17255
Controller design for unknown multivariable systems using monotone modeling errors [RR-144] N82-17899
COMPLEX ALIGN: A technique for the characteristic locus method of design --- of controllers [OUEL-1366/81] N82-17925

CONVECTION
The effect of perturbations of convective energy transport on the luminosity and radius of the Sun [NASA-CR-168445] N82-18113

CONVECTION CURRENTS
The explanation of ball lightning N82-17788
Meteorological settings associated with significant convective storms in Colorado [PB82-106238] N82-17795
Thermal perturbation of the Sun [NASA-CR-168459] N82-18111

CONVECTIVE HEAT TRANSFER
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 1: Theoretical aspects
[EUR-7427/I-EN-VOL-1] N82-17460
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 2: User's manual
[EUR-7427/II-EN-VOL-2] N82-17461
Fling-off cooling of straight spur gears --- oil cooling of the meshing zone
[WTHD-136] N82-17510
CONVERGENCE
Requirements for instrument approaches to converging runways
[AD-A108075] N82-17144
Quasi-Newton methods converge at the golden section rate
[AD-A108663] N82-17901
Accelerated convergence in the simulation of countably infinite state Markov chains
[AD-A107969] N82-17943
CONVERSION
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] N82-17611
CONVEXITY
Turbulent boundary layer heat transfer experiments: Convex curvature effects including introduction and recovery
[NASA-CR-3510] N82-17456
Dual convex cones of order restrictions with applications
[AD-A108126] N82-17906
CONVEYORS
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] N82-17565
CONVOLUTION INTEGRALS
Deconvolution of chromatograms
[AD-A107606] N82-17309
Stability analysis of numerical methods for Volterra integral equations with polynomial convolution kernels
[MC-NW-109/81] N82-17917
COOLANTS
Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658
COOLING
Change of global climate during recent 100 years
N82-17775
COORDINATES
Smoothing and coarse grid approximation properties of multigrid methods
[MC-NW-110/81] N82-17918
Application of multigrid methods for integral equations to two problems from fluid dynamics
[MC-NW-111/81] N82-17919
Multigrid methods for differential eigenvalue and variational problems and multigrid simulation
N82-17934
COPOLYMERS
Electron paramagnetic resonance saturation characteristics of pristine and doped polyacetylenes
[AD-A107716] N82-17370
Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %)
[AD-A107809] N82-17378
Structural and dielectric investigation on the nature of the transition in a copolymer of vinylidene flouride and trifluoroethylene (54/46 Mol %)
[AD-A107846] N82-17379
COPPER
Mechanistic studies on the extraction of copper(11) by hydrophobic reagents N82-17327
The cluster approach to the magnetic susceptibilities of low-dimensional copper clusters N82-17333
CORONARY CIRCULATION
Informativeness of ultrasonic Doppler cardiography in evaluation of coronary circulation N82-17828
CORRELATION
Influence of correlations and computational procedures on flow field predictions N82-17181
Robust principal components and dispersion matrices via projection pursuit
[AD-A107827] N82-17909
CORROSION
Aircraft Corrosion
[AGARD-CP-315] N82-17349
US Naval fleet aircraft corrosion N82-17350
An airline view of the corrosion problem
N82-17352
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353
On the Corrosion problems of the TAF F-5 aircraft
N82-17354
The experience of corrosion on French military aerodynes N82-17355
Design and maintenance against corrosion of aircraft structures N82-17356
CORROSION PREVENTION
Corrosion Fatigue — conferences
[AGARD-CP-316] N82-17342
Mechanisms of corrosion fatigue — of high strength aluminum alloys N82-17343
Fracture mechanics based modelling of the corrosion fatigue process N82-17344
Corrosion fatigue behaviour of some aluminium alloys N82-17345
Corrosion fatigue of offshore and ship-building steels N82-17346
Variable amplitude corrosion fatigue behavior of a low carbon steel N82-17347
Flight-by-flight corrosion fatigue tests N82-17348
Detection and prevention of corrosion in Royal Air Force aircraft N82-17351
Forecasting corrosion damage and maintenance costs for large aircraft N82-17357
Corrosion control measures for military aircraft: Present UK requirements and future developments
N82-17358
Corrosion prevention methods developed from direct experience with aerospace structures N82-17359
Corrosion prevention measures used in the construction of an aircraft airframe: The case of 2014 and 2214 alloys N82-17360
Recent developments in materials and processes for aircraft corrosion control N82-17361
New concepts in multifunctional corrosion for aircraft and other systems N82-17362
Corrosion in naval aircraft electronic systems
N82-17363
Corrosion protection schemes for aircraft structures: Some examples for the corrosion behaviour of Al alloys N82-17364
CORROSION RESISTANCE
Corrosion control test method for avionic components
[AD-A108061] N82-17171
Review of NASA progress in thermal barrier coatings for stationary gas turbines
[NASA-TM-81716] N82-17335
Sulfur in the corrosion of superalloys
[AD-A107667] N82-17337
COSMIC DUST
Dust-like stages in the early universe and the restrictions on the primordial black hole spectrum
[REPT-646] N82-18089
COSMIC RAYS
Cosmic ray NM-64 neutron monitor data-4
[IPS-81-9] N82-18116
COSMIC X RAYS
Extended adiabatic blast waves and a model of the soft X-ray background — interstellar matter
[NASA-CR-168411] N82-18095
COSMOLOGY
Electric charge in the Kruskal space-time and the Jeans conjecture
[REPT-653] N82-18091
COSMOS SATELLITES
Status of space biomedical programs N82-17239
COST ANALYSIS
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] N82-17611
COST EFFECTIVENESS
Protocol level modules for cost effective standard computer communication N82-17109
Economy of small reusable LEO satellite platforms
[MBB-UR-498-81-O] N82-17247
COST ESTIMATES
Granular activated carbon installations
[PB82-102492] N82-17659
COULOMB COLLISIONS
Extended adiabatic blast waves and a model of the soft X-ray background — interstellar matter
[NASA-CR-168411] N82-18095
COULOMB POTENTIAL
Long range intermolecular potentials from static form factors N82-17975
Low-energy behaviour of the real depth of the proton optical potential
[PB82-115213] N82-17984
COUNTER-ROTATING WHEELS
Fling-off cooling of straight spur gears --- oil cooling of the meshing zone
[WTHD-136] N82-17510
COUPLED MODES
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641
COUPLING
Distributed and decentralized control in fully distributed processing systems N82-17101
Fluid-structure coupling in Lagrange-Lagrange and Euler-Lagrange descriptions
[EUR-7424-EN] N82-17952
COVARIANCE
A method of nonparametric survival analysis for doubly censored data N82-17938
COVERINGS
The effect of fabric coverings on the acoustic performance of modular absorbers
[BBC-RD-1981/8] N82-17957
CRACK INITIATION
Effects of cyclic loading on projectile impact damage N82-17167
Corrosion fatigue behaviour of some aluminium alloys N82-17345
CRACK PROPAGATION
Fatigue behavior of fiber-resin composites
[MIT-RR-R81-2] N82-17269
The influence of notch length and ligament length on the toughness of boron fiber reinforced aluminum
[DFVLR-FB-81-22] N82-17270
Corrosion fatigue behaviour of some aluminium alloys N82-17345
Corrosion fatigue of offshore and ship-building steels N82-17346
Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity
[AD-A107617] N82-17371
An electrical method for the monitoring of fatigue crack growth
[BAE-MDR-044] N82-17518
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
Stress intensity for interacting flaws. Part 3: Photoelastic determination of mixed modes; stress intensity factors for interacting flaws
[OUEL-1368/81-PT-3] N82-17542
CRACKING (FRACTURING)
Stress corrosion of ceramic materials
[AD-A108045] N82-17380
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
CRACKS
Defect detection and identification in Si3N4 and SiC using controlled reluctance electromagnetic test methods
[AD-A107726] N82-17369
CRASHES
Aircraft accident report - Universal Airways, Inc., Beech 65-A80/Excalibur Conversion, N100UV, near Madisonville, Texas, July 2, 1981
[NTSB-AAR-81-17] N82-17138
CRITERIA
Stress intensity for interacting flaws. Part 2: A literature survey of fracture criteria
[OUEL-1367/81-PT-2] N82-17541
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871

CRITICAL PATH METHOD
Expected use of micro-based network analysis [AD-A107880] N82-18057

CROP GROWTH
A system for crop/climate assessment using meteorological and satellite data N82-17752
Meteorological services in agronomic and economic evaluations of risk N82-17760
The stability of yields in Shanghai and the climatic conditions N82-17761
The summer monsoon rains over South and East Asia and West Pacific N82-17771

CROP INVENTORIES
A system for crop/climate assessment using meteorological and satellite data N82-17752
Climate applications to agricultural problems N82-17759

CROSSLINKING
The structural formation and physical behaviour of cross-linked epoxy resins [RAE-LIB-TRANS-2067] N82-17268

CRUDE OIL
Geological evolution and economic geology of the Burdekin River region, Queensland [BMR-BULL-208] N82-17696

CRYSTAL DEFECTS
Defect detection and identification in Si3N4 and SiC using controlled reluctance electromagnetic test methods [AD-A107726] N82-17369
Defect structure in the alkali-gallate fast ion conductors N82-18033
Study of defects produced by the growth, post treatment and fabrication of quartz [AD-A107771] N82-18048

CRYSTAL GROWTH
Crystal growth from the vapor phase experiment MA-085, section 7 [NASA-CR-161965] N82-18043
Quantitative determination of zero-gravity affects on electronic materials processing germanium crystal growth with simultaneous interface demarcation experiment MA-060, section 5 [NASA-CR-161964] N82-18044
Preparation of InP by solution and melt growth techniques [AD-A107646] N82-18047
Study of defects produced by the growth, post treatment and fabrication of quartz [AD-A107771] N82-18048

CRYSTAL LATTICES
Energy bands and superlattice formation in titanium diselenide N82-18035

CRYSTAL STRUCTURE
New energetic materials. Structural characterization [AD-A107714] N82-17381
Harmonic and anharmonic properties of diamond structure crystals with application to the calculation of the thermal expansion of silicon [NASA-CR-168437] N82-18041
Research in LPE of doped LnibOsub3 and LiTaOsub3 thin films [AD-A107686] N82-18045
Polarization mechanisms in phase 2 poly (vinylidene fluoride) films [AD-A107850] N82-18049

CRYSTALLIZATION
Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %) [AD-A107809] N82-17378

CRYSTALLOGRAPHY
Mossbauer studies on partially oriented samples of carbon monoxymyoglobin and photodissociated carbon monoxymyoglobin N82-18038
Crystal growth from the vapor phase experiment MA-085, section 7 [NASA-CR-161965] N82-18043
Polarization mechanisms in phase 2 poly (vinylidene fluoride) films [AD-A107850] N82-18049

CULTURE TECHNIQUES
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600

CURRENT DENSITY
Model calculations of the tearing instability associated with ac-modulation of the plasma-current in Tokamaks [IPP-6/198] N82-18013

CURRENT REGULATORS
State-variable analysis of non-linear circuits with a desk computer [NASA-TM-83876] N82-17440

CURVATURE
Turbulent boundary layer heat transfer experiments: Convex curvature effects including introduction and recovery [NASA-CR-3510] N82-17456

CUTTERS
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick [NASA-CR-161960] N82-17553
Development of sensitized pick coal interface detector system [NASA-CR-161961] N82-17560
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models [RR-151-PT-1] N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models [RR-152-VOL-2] N82-17565

CYANO COMPOUNDS
Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281

CYANOGEN
Energy partitioning in the dissociation of cyanogen at 193nm [AD-A107773] N82-17303

CYCLES
A discrete-time multivariable criterion for limit cycle predictions [OUEL-1369/81] N82-17902

CYCLIC COMPOUNDS
Planar, square-pyramidal and macrocyclic transition metal complexes prepared from linear tetradentate diaminediphosphine ligands N82-17330

CYCLIC LOADS
Effects of cyclic loading on projectile impact damage N82-17167
SPAR reference manual update SPAR level 15 [NASA-CR-161967] N82-17520
Rotor model for the verification of computational methods [ISD-275] N82-17638
Loading cycles and material data for the layout of a wind turbine of special hub concept [ISD-273] N82-17643

CYCLOBUTANE
Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation N82-17297

CYCLONES
The significance of tropical cyclone rainfall in the water supply of south Florida N82-17547
World Weather Watch Tropical Cyclone Program. Typhoon operational experiment (Topex): Automatic weather stations for tropical cyclone areas --- systems design and operation [WMO-570] N82-17790

CYCLOPROPANE
Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation N82-17297

CYCLOTRON RADIATION
Microinstabilities in a radially contracting inhomogeneous cylindrical plasma slab. Part 2: Lower hybrid and electron cyclotron drift instabilities in the plasma focus [IPF-80-13-PT-2] N82-18022

CYCLOTRON RESONANCE
Electron cyclotron resonance heating of tandem mirrors at relativistic energies [AD-A107944] N82-18018
The role of cyclotron resonance processes in the spectra of accreting neutron stars [ISSN-0340-8922] N82-18099

CYLINDERS
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner [NASA-CR-161962] N82-17554

CYLINDRICAL BODIES
Streamwise vorticity decay downstream of a three dimensional protuberance [AD-A108080] N82-17466

CYLINDRICAL PLASMAS
First-order toroidal correction to the minimum energy state of a cylindrical plasma column of finite beta [REPT-81-133] N82-18011

CYTOLOGY
Cytologic and biochemical genetic effects of chemical carcinogens [AD-A107615] N82-17864

D

D REGION
Chemical fluctuations and incoherent scattering theory in the terrestrial D region [AERONOMICA-ACTA-A-233-1981] N82-17704

DAMAGE
Damage tolerant design for cold-section turbine engine disks [AD-A107863] N82-17176
Lubrication breakdown between gear teeth N82-17213

DAMAGE ASSESSMENT
Analysis methods for ballistic damage size and type N82-17163
Damage from High explosive (HE) projectiles N82-17164
Damage from engine debris projectiles N82-17165
Forecasting corrosion damage and maintenance costs for large aircraft N82-17357

DAMPERS (VALVES)
Part span damper loss prediction for transonic axial fan rotors N82-17192

DATA ACQUISITION
Development of a simple, self-contained flight test data acquisition system [NASA-CR-168438] N82-17478
Water resources data for Utah, water year 1980 [PB82-108606] N82-17587
Meteorological data basis N82-17618

DATA BASES
Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems N82-17150
CIMS: The Cartographic Information Management System [AD-A108109] N82-17571
Applications of climate information and the United States National Climate Program N82-17765
Federal requirements for a Federal information processing standards data dictionary system [PB82-117607] N82-18060
Training of information specialists [PB82-103227] N82-18063
Technology transfer and the management of human services [PB82-105644] N82-18077

DATA CORRELATION
Present status of long-range weather forecasting N82-17755

DATA PROCESSING
Tactical Airborne Distributed Computing and Networks [AGARD-CP-303] N82-17086
Distributed data processing: What is it? N82-17087
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286
Deconvolution of chromatograms [AD-A107608] N82-17309
Development of a global system for acquiring and processing climatological data N82-17749
Climatic data of Asia and Western Pacific, its availability, network, and applications N82-17750
Meteorological products and some applications of Global Meteorological Satellite (GMS) data N82-17751
Multiple Doppler radar analysis of severe thunderstorms: Designing a general analysis system [PB82-114117] N82-17794
Computer science and technology: An assessment and forecast of ADP in the Federal government [PB82-116112] N82-17883
Two-channel linear-predictive spectral analysis: Program for the HP 9845 desk calculator [AD-A107634] N82-17889

Introduction to the central Scientific Computing Facilities
[DE82-003258] N82-17896

DATA PROCESSING EQUIPMENT
A prototype interface unit for microprocessor-based loran-C receiver
[NASA-CR-168441] N82-17141

DATA PROCESSING TERMINALS
Generalized polling algorithms for distributed systems N82-17103

DATA RECORDING
Detection, location and identification of explosions and earthquakes using regional seismic data recorded at a single station
[AD-A107587] N82-17719

DATA RETRIEVAL
Recovery in distributed processing systems N82-17102

DATA SAMPLING
An integrated scheme for NDA data evaluation N82-18058

DATA SMOOTHING
Smoothing and coarse grid approximation properties of multigrid methods
[MC-NW-110/81] N82-17918

DATA SYSTEMS
Development of a global system for acquiring and processing climatological data N82-17749
Climatic data of Asia and Western Pacific, its availability, network, and applications N82-17750

DC 10 AIRCRAFT
Investigation and evaluation of a computer program to minimize three-dimensional flight time tracks
[NASA-CR-168419] N82-17879

DECAY RATES
The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961

DECISION THEORY
Meteorological services in agronomic and economic evaluations of risk N82-17760

DECODING
Implementation of a display routine for coded map data bases
[FOA-C-30241-E] N82-18059

DECOMPOSITION
Two theorems on the decomposition of a para-unitary function into a sum of terms with uniform argument
[INPE-2217-PRE/015] N82-17905

DECONTAMINATION
Removing water-soluule hazardous material spills from waterways with carbon
[PB82-103813] N82-17661

DEFECTS
Sulfur in the corrosion of superalloys
[AD-A107867] N82-17337
An investigation of the early detection of defects in ball bearings by the vibration monitoring
[NAL-TR-675] N82-17504

DEFORMATION
The kinematic and metamorphic development of the Towaliga-Goat Rock mylonites, Georgia-Alabama N82-17730

DEGREES OF FREEDOM
Application to missile dynamics
[MBB-UA-553-80-O] N82-17248

DEHYDRATED FOOD
Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors N82-17816

DELAWARE RIVER BASIN (US)
The Delaware River Basin comprehensive (level B) study
[PB82-111477] N82-17679

DELTA WINGS
Experimental study of delta wing leading-edge devices for drag reduction at high lift — conducted in Langley 7- by 10-foot high speed tunnel N82-17125
Finite difference computation of the conical flow field over a delta wing
[VKI-TN-140] N82-17135

DELTAS
Deposition and diagenesis of Glauconite Sandstone, Berrymore-Lobstick-Bigoray area, South Central Alberta: A study of physical chemistry of cementation N82-17703
The characterization and evolution of carbonate tidal deltas, upper Florida Keys N82-17796

DEMAND (ECONOMICS)
Water for non-nuclear energy development in the Great Basin
[PB82-116781] N82-17581
Energy environment study
[NASA-CR-168458] N82-17854

DENDROCHRONOLOGY
Climatic change and social disturbance N82-17773

DENMARK
A statistical analysis of monthly precipitation in Denmark
[DMI-CLIMATOL-PAPERS-7] N82-17789

DENSE PLASMAS
New excitation and ionization mechanism of ions in dense plasmas: The role of autoionizing states
[IPPJ-549] N82-18009
Quantum corrections to the properties of dense plasmas
[LP-189] N82-18026

DENSITY (NUMBER/VOLUME)
Rocket-borne instrumentation for the measurement of atomic oxygen based on chemical release in the lower thermosphere
[AERONOMICA-ACTA-A-231-1981] N82-17257

DENSITY DISTRIBUTION
Two-dimensional photometry of planetary nebulae N82-18083

DENSITY MEASUREMENT
Density measurements in gas particle flows
[VKI-TM-32] N82-17471

DEOXYRIBONUCLEIC ACID
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864

DEPOSITION
Development of a man and supply hoisting system for underground metal and nonmetal mines, volume 1
[PB82-113366] N82-17583
Depositional environments of the subsurface Cretaceous deposits of southeastern North Carolina N82-17701

DEPOSITS
Coal-liquefaction catalyst development
[DE82-000137] N82-17314
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] N82-17672

DESERTS
Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

DESIGN ANALYSIS
Deviation/turning angle correlations N82-17193
Single stage transonic compressor and equivalent plane cascade N82-17196
Results of calculations N82-17198
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] N82-17508
A closed form local solution of a nonlinear structural design problem in terms of the design parameters
[AD-A107669] N82-17531
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] N82-17554

DESORPTION
Some analytical aspects of field desorption mass spectrometry N82-17274

DESULFURIZING
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] N82-17672
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17684

DETECTION
The application of electrochemical detection in high performance liquid chromatograph (HPLC): Selective determination of readily oxidisable compounds at trace level
[DRIC-T-6481] N82-17298
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555
Acoustic detection of high energy particles N82-17966

DEUTERIUM COMPOUNDS
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294

DEUTERONS
A space-time study of double scattering in hadron deuteron collisions N82-17985

DEW
An analysis of Wangara micrometeorology: Surface stress, sensible heat, evaporation, and dewfall
[PB82-114190] N82-17793

DEWATERING
Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596

DIAMONDS
Harmonic and anharmonic properties of diamond structure crystals with application to the calculation of the thermal expansion of silicon
[NASA-CR-168437] N82-18041

DICHROISM
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294
Magnetic circular dichroism and Faraday rotation of cesium-argon excimers and cesium dimers N82-18030

DICTIONARIES
Federal requirements for a Federal information processing standards data dictionary system
[PB82-117607] N82-18080

DIELECTRIC PROPERTIES
Structural and dielectric investigation on the nature of the transition in a copolymer of vinylidene flouride and trifluoroethylene (54/46 Mol %)
[AD-A107846] N82-17379
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] N82-17448
Optical thin film coatings
[AD-A107808] N82-18001

DIESEL ENGINES
Synfuel modified diesel
[DE82-002298] N82-17400
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] N82-18068

DIESEL FUELS
Synfuel modifind diesel
[DE82-002298] N82-17400
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] N82-18068

DIETS
In-flight diets and quantitative adequacy thereof to pilot expenditure N82-17813

DIFFERENTIAL EQUATIONS
Applications of stochastic differential equations in flight mechanics
[MBB-UA-589-81-O] N82-17159
NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916
On the contractivity of a complex Runge-Kutta scheme
[MC-NW-112/81] N82-17920

DIFFERENTIAL PRESSURE
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575

DIFFRACTION PATTERNS
Holographic interferometry of transparent media with reflection from imbedded test objects
[NASA-CR-168395] N82-17475

DIFFUSION
Survey on diffusion factors and profile losses N82-17186
Evaluation of profile loss predictions based on diffusion factors N82-17200
Facilitated diffusion of small non-electrolytes in the human red blood cell N82-17855
Spectral diffusion in orientationally disordered organic solids
[AD-A107950] N82-18050

DIFFUSION COEFFICIENT
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266

Uniaxial model for a gas loaded variable conductance heat pipe
[NLR-TR-80048-U] N82-17462
An improved flat front model for a gas loaded variable conductance heat pipe
[NLR-TR-80049-U] N82-17463

DIFFUSION THEORY
Microwave discharges — theory and applications
[LP-192] N82-18027

DIGITAL FILTERS
Positioning of multi stopband notches in staggered-PRF MTI filters
[LEOK-TR-1979-11] N82-17427

DIGITAL SIMULATION
Watershed model study using LANDSAT data
N82-17602
VTOL/STOL visual study
[NASA-CR-166292] N82-17872

DIGITAL SYSTEMS
Mirage 2000 weapons systems architecture
N82-17118
Digital Avionics Information System (DAIS) documentation
[AD-A108000] N82-17172
Training of information specialists
[PB82-103227] N82-18063

DIGITAL TECHNIQUES
Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086
Recovery in distributed processing systems
N82-17102
Integrated control of mechanical system for future combat aircraft N82-17117
Activities report of the Antennas, Propagation and Digital Image-Processing Group: Research in progress N82-17425
A study of high density bit transition requirements versus the effects on BCH error correcting coding
[NASA-CR-161957] N82-17884

DIGITALIS
Regulation of calcium current and calicum activity in heart cells N82-17870

DIMENSIONAL ANALYSIS
Projection pursuit
[AD-A107817] N82-17910

DIMERS
Magnetic circular dichroism and Faraday rotation of cesium-argon excimers and cesium dimers
N82-18030

DIPOLE ANTENNAS
WKB mode summing program for dipole antennas of arbitrary orientation and elevation for VLF/LF propagation. Calculation of VLF/LF field strengths in the earth-ionosphere waveguide
[AD-A107683] N82-17435

DIRECT CURRENT
Straight and chopped DC performance data for a reliance EV-250AT motor with a General Electric EV-1 controller
[NASA-CR-165447] N82-17608

DIRECTIONAL ANTENNAS
Antenna direction-finding characteristic
[AD-A108110] N82-17429

DISASTERS
Food crises and famines: The UNRISD food systems approach N82-17762

DISCRETE FUNCTIONS
Stochastic control system parameter identifiability
[NASA-CR-166300] N82-17898

DISCRIMINANT ANALYSIS (STATISTICS)
Direction and collinearity factors in growth curve models and other problems in discriminant analysis
N82-17947

DISPERSION
Assessment and control of chrysotile asbestos emissions from unpaved roads
[PB82-102526] N82-17411

DISPERSIONS
Fluid flow and gas dispersion in stirred tank reactors N82-17457

DISPLAY DEVICES
A prototype interface unit for microprocessor-based loran-C receiver
[NASA-CR-168441] N82-17141
VTOL/STOL visual study
[NASA-CR-166292] N82-17872

DISTANCE
Weighting of distances in factorial analysis
[ENST-C-81005] N82-17543

Reflections on aircraft unmask ranges
[AD-A107953] N82-17948

DISTRIBUTED PARAMETER SYSTEMS
Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086
Distributed data processing: What is it?
N82-17087
The effect of increasingly more complex aircraft and avionics on the method of system design
N82-17088
A tutorial on distributed processing in aircraft/avionics applications N82-17089
Performance study of a distributed microprocessor architecture for use aboard military aircraft
N82-17090
Functional versus communication structures in modern avionic systems N82-17092
Economic considerations for real-time naval aircraft/avionics distributed computer control systems N82-17097
A PEARL software system for multi-processor systems N82-17100
Distributed and decentralized control in fully distributed processing systems N82-17101
Recovery in distributed processing systems
N82-17102
Generalized polling algorithms for distributed systems N82-17103
A reconfigurable change network for distributed process control N82-17108
Practical aspects which apply to MIL-STD-1553B data networks — avionics and weapons delivery
N82-17111
The traffic flow in a distributed real time computing system (RDC-SYSTEM) with a fiber-optic ringbus system N82-17112
Dispersed sensor processing mesh project — avionics N82-17113
Integrated control of mechanical system for future combat aircraft N82-17117
Mirage 2000 weapons systems architecture
N82-17118
F/A-18A tactical airborne computational subsystem N82-17119
F/A-18 weapons system support facilities
N82-17120

DISTRIBUTION FUNCTIONS
Accelerated life testing under competing exponential failure distributions
[AD-A107626] N82-17516
Two papers on recursive evaluation of compound distributions
[AD-A107912] N82-17914
Multivariate harmonic new better than used in expectation distributions
[AD-A108125] N82-17941
P-values for multi-stage and sequential tests
[AD-A108127] N82-17942
Experimental determination of the electron energy distribution function in plasmas
[INPE-2107-RPE/333] N82-18010

DIURNAL VARIATIONS
Differential behaviour of the equatorial ionospheres on the eastern and western coasts of the South American continent
[INPE-2237-PRE/024] N82-17710

DOCUMENTATION
Functional documentation. A practical aid to the orderly solution of the system design problem
N82-17098
A consistent approach to the development of system requirements and software design N82-17099

DOCUMENTS
Design and maintenance against corrosion of aircraft structures N82-17356
Introduction to the central Scientific Computing Facilities
[DE82-003258] N82-17696

DOPPLER EFFECT
Positioning of multi stopband notches in staggered-PRF MTI filters
[LEOK-TR-1979-11] N82-17427

DOPPLER RADAR
Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500

A stepped-frequency HF radar for ionospheric diagnostics
[AD-A107810] N82-17718
Multiple Doppler radar analysis of severe thunderstorms: Designing a general analysis system
[PB82-114117] N82-17794
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

DOUBLE BASE ROCKET PROPELLANTS
Effects on solid-state reactions during thermal decomposition of nitrocellulose — rocket propellant
[DRIC-T-6460] N82-17390

DOWNWASH
Surveys of flow-field around empennage of the NAL STOL-research-aircraft model
[NAL-TR-677] N82-17124

DRAG
Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521

DRAG REDUCTION
Experimental study of delta wing leading-edge devices for drag reduction at high lift — conducted in Langley 7- by 10-foot high speed tunnel N82-17125

DRAINAGE
Digital model of the unconsolidated aquifer system in the Modesto area, Stanislaus and San Joaquin Counties, California
[PB82-102559] N82-17593
Extension of the soil conservation service rainfall-runoff methodology for ungaged watersheds
[PB82-111394] N82-17680

DRAINAGE PATTERNS
Watershed model study using LANDSAT data
N82-17602
Extension of the soil conservation service rainfall-runoff methodology for ungaged watersheds
[PB82-111394] N82-17680
Urban stormwater management and technology: Case study in San Francisco
[PB82-105594] N82-18081

DREDGED MATERIALS
Dredging management: Data and analysis for the New England/Long Island Sound region
[PB82-111626] N82-17412

DRILLING
Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] N82-17629
Assessment of oil production volatile organic compound sources
[PB82-108176] N82-17684

DROUGHT
Before the well runs dry: A handbook on drought management
[PB82-105616] N82-17579
The nature of drought and strategies to reduce its effects N82-17770
Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772

DRYING APPARATUS
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669

DUNES
Rates and implications of bluff recession along the Lake Michigan shorezone of Michigan and Wisconsin
N82-17548

DUPLEX OPERATION
Retransmission strategies for error control in packet transmission protocols N82-17110

DWARF NOVAE
A spectroscopic study of the radial velocity variations and accretion disks found in four dwarf novae
N82-18092

DYNAMIC CHARACTERISTICS
A rapid estimation of the lifetime of near Earth satellites for mission analysis
[INPE-2158-RPE/377] N82-17246

DYNAMIC MODELS
Water quality simulation in Wahiawa reservoir, O'Ahu, Hawaii
[PB82-108499] N82-17588
Present status of long-range weather forecasting
N82-17755

DYNAMIC PROGRAMMING
Stochastic control system parameter identifiability
[NASA-CR-166300] N82-17898

DYNAMIC RESPONSE
Analysis methods for predicting structural response to projectile impact N82-17162
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165556] N82-17174
Problems of engine response during transient maneuvers N82-17221
Static and dynamic investigations of different towers for wind turbines
[ISD-274] N82-17637
Rotor model for the verification of computational methods
[ISD-275] N82-17638

DYNAMIC STABILITY
Application to missile dynamics
[MBB-UA-553-80-O] N82-17248

DYNAMIC STRUCTURAL ANALYSIS
Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160
An investigation of dynamic-analysis methods for variable-geometry structures
[NASA-CR-167498] N82-17522
Distribution theoretic methods for dynamic analysis and optimization of mechanisms with intermittent motion
[AD-A108021] N82-17532
Stress analysis and test philosophy for wind energy converter blades
[NBB-UD-300-80-O] N82-17536
Past, present and future of shell stability analysis
[VTH-LR-320] N82-17537
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] N82-17642

E

EARTH ALBEDO
Regional properties of angular reflectance models N82-17599

EARTH ATMOSPHERE
Energy transport within the Earth's atmosphere ocean system from a climate point of view N82-17729
Increase of atmospheric CO2 and possible climatic changes N82-17763

EARTH CRUST
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] N82-17708
An active source electromagnetic method for probing the Earth's electrical conductivity structure beneath the ocean floor N82-17809

EARTH LIMB
Advantages of space stations at the Earth-Moon libration points N82-17242
Stratospheric aerosol properties from Earth limb photography and Mie scattering theory
[AERONOMICA-ACTA-A-235-1981] N82-17705

EARTH MANTLE
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
Kinematic thermal models of the Earth's mantle N82-17740

EARTH MOVEMENTS
Terrestrial heat flow overlying the Andean subduction zone N82-17738
On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741

EARTH OBSERVATIONS (FROM SPACE)
Study on the accommodation potentials of NADIR-oriented payloads on space shuttle
[DFVLR-FB-81-27] N82-17249
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] N82-17562

EARTH ORBITS
Economy of small reusable LEO satellite platforms
[MBB-UR-495-81-O] N82-17247

EARTH PLANETARY STRUCTURE
Kinematic thermal models of the Earth's mantle N82-17740

EARTH RESOURCES
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] N82-17722
Increase of atmospheric CO2 and possible climatic changes N82-17763

EARTHQUAKE RESISTANCE
The seismic resistant design of R/C coupled structural walls
[PB82-113358] N82-17417

EARTHQUAKES
Bangui anomaly
[WORK-M-45] N82-17556
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
Detection, location and identification of explosions and earthquakes using regional seismic data recorded at a single station
[AD-A107587] N82-17719
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] N82-17722
The seismicity of forearc marginal wedges (accretionary prisms) and seismotectonics of convergent margins N82-17726
An application of ray theory to the investigation of seismic head wave post-Pn phases N82-17736
Anomalous radon (222) emission and its association with earthquakes and tectonism N82-17739

ECHO SOUNDING
Detection and mapping of insoluble sinking pollutants
[PB82-105586] N82-17674

ECHOES
Photon echo modulation in LaF3:Pr3+ — praseodymium doped lanthanum trifluoride N82-17995

ECONOMIC ANALYSIS
Economic considerations for real-time naval aircraft/avionics distributed computer control systems N82-17097
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] N82-17396
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 1: Summary
[NASA-CR-168432] N82-17612
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 2: Derivation of system energy price equations
[NASA-CR-168433] N82-17613
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17684
Meteorological services in agronomic and economic evaluations of risk N82-17760

ECONOMIC DEVELOPMENT
NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069

ECONOMIC FACTORS
Economic considerations for real-time naval aircraft/avionics distributed computer control systems N82-17097
Energy environment study
[NASA-CR-168458] N82-17654
Study of climate and its applied aspects N82-17766

ECONOMIC IMPACT
The nature and scope of climate applications N82-17757
The impacts of climatic change on human society N82-17761
Improving the science of climate impact study N82-17783

ECONOMICS
Assessment of technical potential: Problems, methods and results N82-17619
Economic evaluation N82-17620

EDGES
Analysis of the curved junction edge between a flat plate and a prolate spheroid
[AD-A108543] N82-17130

EDITING ROUTINES (COMPUTERS)
PEP: An interactive programming system with an ALGOL-like programming language — program editor and processor (PEP)
[MC-IW-172/81] N82-17892

EFFLUENTS
Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652
Evaluation of a treatment lagoon for combined sewer overflow
[PB82-105214] N82-17671
Performance of activated sludge processes: Reliability, stability and variability
[PB82-109604] N82-17689

EIGENVALUES
Bifurcating instability of the free surface of a ferrofluid N82-17473
Multigrid methods for differential eigenvalue and variational problems and multigrid simulation N82-17934

EIGENVECTORS
COMPLEX ALIGN: A technique for the characteristic locus method of design — of controllers
[OUEL-1366/81] N82-17925

EIKONAL EQUATION
Application of eikonal approximation to charge transfer in energetic ion-atom collisions N82-17986

EJECTORS
Technology overview for advanced aircraft armament system program
[AD-A107680] N82-17155

ELASTIC DAMPING
A correction to the engineering theory of elastic stability
[OUEL-1376/81] N82-17540

ELASTIC DEFORMATION
Survey of advanced fracture-mechanics test methods
[DE82-000823] N82-17535

ELASTIC PLATES
Acoustic intensity vectors from an infinite plate with line attachments
[AMTE(N)-TM-81086] N82-17958

ELASTIC PROPERTIES
Applicability of linear elastic fracture mechanics to rigid PVC pipe materials
[MIT-RR-R81-1] N82-17523

ELASTIC SCATTERING
Scattering of electrons by hydrogenic ions N82-17962
Elastic and inelastic scattering of 800 MeV/c K+/- mesons from carbon-12 and calcium-40 N82-17991
Recommended values of transport cross sections for elastic collision and total collision cross section of electrons in atomic and molecular gases
[IPPJ-AM-19] N82-18007

ELASTOMERS
Prospects for materials (plastics, elastomers, paints): Volume 1: Plastic materials (appendix 1, plastification systems)
[CETIM-12-B-194-VOL-1] N82-17382
Prospects for materials (plastics, elastomers, paints). Volume 6: Elastomers
[CETIM-12-B-194-VOL-6] N82-17387

ELASTOPLASTICITY
Dynamic elastic-plastic characterization of nuclear pressure vessel material
[CISE-1693] N82-17528
A derivation of the small-strain incremental theory of plasticity from thermomechanics
[OUEL-1371/81] N82-17539

ELECTRIC ARCS
Effects of arc current on the life in burner rig thermal cycling of plasma sprayed ZrOsub2-Ysub2Osub3
[NASA-TM-82795] N82-17453

ELECTRIC AUTOMOBILES
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] N82-18066

ELECTRIC BATTERIES
A new class of room temperature molten salts for battery applications
[AD-A107989] N82-17627

Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] N82-17648

ELECTRIC CHARGE
Electric charge in the Kruskal space-time and the Jeans conjecture
[REPT-653] N82-18091

ELECTRIC CHOPPERS
Straight and chopped DC performance data for a reliance EV-250AT motor with a General Electric EV-1 controller
[NASA-CR-165447] N82-17608

ELECTRIC CONDUCTORS
Defect structure in the alkali-gallate fast ion conductors N82-18033

ELECTRIC CONNECTORS
Corrosion in naval aircraft electronic systems
N82-17363

ELECTRIC CURRENT
A radio-frequency moving-boundary detector and its application N82-17328
Quantum beats in photoionization current
N82-18031

ELECTRIC EQUIPMENT
Evaluation of control and protection circuits
[PB82-105065] N82-17450

ELECTRIC FIELDS
Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365
A digital field strength measuring receiver for l. f. and m. f.
[BBC-RD-1981/7] N82-17474
Large horizontal electric fields measured at heights of the Brazilian magnetic anomaly and association to local energetic particle precipitation
[INPE-2120-RPE/344] N82-17712
Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

ELECTRIC GENERATORS
Development of W-Ta generator
[NASA-CR-167477] N82-17300
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 1: Summary
[NASA-CR-168432] N82-17612
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 2: Derivation of system energy price equations
[NASA-CR-168433] N82-17613

ELECTRIC HYBRID VEHICLES
Electric and hybrid vehicle program
[DE82-000904] N82-18072

ELECTRIC MOTOR VEHICLES
Upgraded demonstration vehicle task report
[NASA-CR-168424] N82-18067
Electric and hybrid vehicle program
[DE82-000904] N82-18072
Electric vehicle refuelling infrastructure
[ERG-038] N82-18073

ELECTRIC MOTORS
Straight and chopped DC performance data for a reliance EV-250AT motor with a General Electric EV-1 controller
[NASA-CR-165447] N82-17608

ELECTRIC NETWORKS
Satellite applications to electric-utility communications needs --- land mobile satellite service
[NASA-CR-168430] N82-17253

ELECTRIC OUTLETS
Possibilities for avoiding strong variations of the electrical output power of wind energy systems
N82-17625

ELECTRIC POTENTIAL
An electrical method for the monitoring of fatigue crack growth
[BAE-MDR-044] N82-17518

ELECTRIC POWER PLANTS
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] N82-17603
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 1: Summary
[NASA-CR-168432] N82-17612
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 2: Derivation of system energy price equations
[NASA-CR-168433] N82-17613
Impact of Canadian power plant development and flow apportionment on the Poplar River Basin
[PB82-111618] N82-17681

ELECTRIC POWER SUPPLIES
Implementing agreement for a program of research and development on wind energy conversion systems
[JUEL-SPEZ-106] N82-17617
Assessment of technical potential: Problems, methods and results N82-17619
Economic evaluation N82-17620
Assessment of the potential of LWECS in the Netherlands N82-17621
Power fluctuations: Technical and statistical aspects N82-17622
Forecasting wind power output N82-17623
Assured load carrying capability and capacity credit N82-17624

ELECTRIC POWER TRANSMISSION
Possibilities for avoiding strong variations of the electrical output power of wind energy systems
N82-17625
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845

ELECTRIC PROPULSION
Electric vehicle refuelling infrastructure
[ERG-038] N82-18073

ELECTRIC SPARKS
Electron temperature evolution and macroscopic size of a vacuum spark discharge plasma
N82-18028

ELECTRICAL PROPERTIES
Design, analysis, and test verification of advanced encapsulation systems --- low cost solar arrays
[NASA-CR-168406] N82-17605

ELECTRICAL RESISTANCE
A radio-frequency moving-boundary detector and its application N82-17328

ELECTRICAL RESISTIVITY
An active source electromagnetic method for probing the Earth's electrical conductivity structure beneath the ocean floor N82-17809

ELECTROACOUSTIC TRANSDUCERS
USRD type F63 transducer
[AD-A106748] N82-17959

ELECTROCARDIOGRAPHY
Portable medical status and treatment system
[NASA-CR-167496] N82-17862

ELECTROCATALYSTS
An oxygen electrode based on nickel/cobalt spinel
[AD-A107602] N82-17443
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] N82-17615

ELECTROCHEMICAL CELLS
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] N82-17615
Development of a solar-energy system
[DE81-030531] N82-17633

ELECTROCHEMICAL OXIDATION
The application of electrochemical detection in high performance liquid chromatograph (HPLC): Selective determination of readily oxidisable compounds at trace level
[DRIC-T-6461] N82-17298

ELECTROCHEMISTRY
Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281
Electrochemical investigation of solvent effects on the electrode kinetics and thermodynamics of some transition-metal redox couples N82-17284
The electrochemical and spectrophotometric determination of free and combined chlorine
N82-17292
Corrosion protection schemes for aircraft structures: Some examples for the corrosion behaviour of Al alloys N82-17364
Polymer coated electrodes as microelectrochemical media N82-17366
ONR Tokyo scientific bulletin. Volume 6. Number 3, July to September 1981
[AD-A107649] N82-18118

ELECTRODELESS DISCHARGES
Microwave discharges --- theory and applications
[LP-192] N82-18027

ELECTRODES
Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281
Electrochemical investigation of solvent effects on the electrode kinetics and thermodynamics of some transition-metal redox couples N82-17284
Polymer coated electrodes as microelectrochemical media N82-17366
High efficiency lithium-thionyl chloride cell
[AD-A107949] N82-17442
An oxygen electrode based on nickel/cobalt spinel
[AD-A107602] N82-17443
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] N82-17635

ELECTROENCEPHALOGRAPHY
Cerebral hemispheric activity and automonic nervous function N82-17868

ELECTROLYTES
A radio-frequency moving-boundary detector and its application N82-17328
Development of a solar-energy system
[DE81-030531] N82-17633

ELECTROLYTIC POLARIZATION
High efficiency lithium-thionyl chloride cell
[AD A107949] N82-17442

ELECTROMAGNETIC ABSORPTION
Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

ELECTROMAGNETIC FIELDS
WKB mode summing program for dipole antennas of arbitrary orientation and elevation for VLF/LF propagation. Calculation of VLF/LF field strengths in the earth-ionosphere waveguide
[AD-A107683] N82-17435
Electric charge in the Kruskal space-time and the Jeans conjecture
[REPT-653] N82-18091

ELECTROMAGNETIC HAMMERS
Mechanical shock test analysis
[DE82-000932] N82-17534

ELECTROMAGNETIC INTERACTIONS
The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961
A quark model of the nonstrange baryons
N82-17988
Quantum beats in photoionization current
N82-18031

ELECTROMAGNETIC MEASUREMENT
An active source electromagnetic method for probing the Earth's electrical conductivity structure beneath the ocean floor N82-17809

ELECTROMAGNETIC NOISE
The origin of nulls mode changes and timing noise in pulsars
[PB82-115221] N82-18100

ELECTROMAGNETIC RADIATION
USSR report: Life sciences effects of nonionizing electromagnetic radiation, no. 4
[JPRS-79780] N82-17844
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847
Physical factors of environment as hygiene problem N82-17848
Effects on biological systems of electromagnetic oscillations in millimeter range of wavelengths
N82-17849
Current problems of radiobiology of electromagnetic radiation of radio-frequency range N82-17850

Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851

Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan N82-17852

Effect of hypogeomagnetic field on activity of some cerebral enzymes N82-17853

Rational modeling by pencil-of-function method
[AD-A107741] N82-17912

ELECTROMAGNETIC SCATTERING

Symmetry and multiple electromagnetic scattering by a cluster of spheres
[AD-A108118] N82-17428

Rational modeling by pencil-of-function method
[AD-A107741] N82-17912

ELECTROMAGNETIC WAVE TRANSMISSION

Analytical representation of Atlas I (Trestle)
[AD-A107674] N82-17433

ELECTROMAGNETS

Magnetic bearing reaction wheel tests --- performed on a three-axis air bearing simulator
[ESA-TT-699] N82-17511

ELECTRON ACCELERATORS

Total-dose radiation effects data for semiconductor devices, volume 2
[NASA-CR-168428] N82-17254

ELECTRON BEAMS

Development of high sensitivity X-ray and electron-beam resist processes
[AD-A107833] N82-17374

ELECTRON BUNCHING

Vertical coherent instabilities in bunched particle beams N82-17968

ELECTRON CAPTURE

New excitation and ionization mechanism of ions in dense plasmas: The role of autoionizing states
[IPPJ-546] N82-18009

ELECTRON CYCLOTRON HEATING

The dynamics of microprocesses and current turbulent heating of ions in Uragan-2 stellarator
[IPPJ-548] N82-18006

ELECTRON DECAY RATE

Beam-foil studies of atomic mean-lives in the vacuum ultraviolet N82-17987

ELECTRON DENSITY (CONCENTRATION)

Electron temperature evolution and macroscopic size of a vacuum spark discharge plasma N82-18028

ELECTRON DENSITY PROFILES

The explanation of ball lightning N82-17786

ELECTRON DIFFRACTION

Angle-resolved photoemission study of Co-Co (0001)
[AD-A107575] N82-17304

ELECTRON DISTRIBUTION

Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter
[NASA-CR-168411] N82-18095

The distribution of free electrons in the inner galaxy from pulsar dispersion measures
[NASA-TM-83875] N82-18096

ELECTRON ENERGY

Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365

Recommended values of transport cross sections for elastic collision and total collision cross section of electrons in atomic and molecular gases
[IPPJ-AM-19] N82-18007

Experimental determination of the electron energy distribution function in plasmas
[INPE-2107-RPE/333] N82-18010

Electron temperature evolution and macroscopic size of a vacuum spark discharge plasma N82-18028

ELECTRON IMPACT

Electronic excitation of helium and krypton by electron impact N82-18032

ELECTRON MOBILITY

Note on planar undulator wiggler single electron motion
[AD-A108051] N82-17493

Studies of runaway electron transpot in PLT and PDX N82-18005

ELECTRON ORBITALS

A model for electrons existing in hybridized narrow and wide bands
[INPE-2127-RPE/351] N82-18042

ELECTRON PARAMAGNETIC RESONANCE

Electron paramagnetic resonance saturation characteristics of pristine and doped polyacetylenes
[AD-A107716] N82-17370

ELECTRON PLASMA

Electron temperature evolution and macroscopic size of a vacuum spark discharge plasma N82-18028

ELECTRON PRECIPITATION

High latitude dayside precipitating electron regions during the Southern hemisphere summer and their dependence of IMF and K sub p
[IPS-81-4] N82-17717

ELECTRON RUNAWAY (PLASMA PHYSICS)

Studies of runaway electron transpot in PLT and PDX N82-18005

ELECTRON SCATTERING

Kinetic processes in high pressure gases: Excited state collisions
[AD-A108128] N82-17490

Scattering of electrons by hydrogenic ions N82-17962

Recommended values of transport cross sections for elastic collision and total collision cross section of electrons in atomic and molecular gases
[IPPJ-AM-19] N82-18007

ELECTRON STATES

Investigation of a cascade laser system: The excitations and interactions of N sub 2 in the ultraviolet and the near infrared N82-17503

Electronic excitation of helium and krypton by electron impact N82-18032

ELECTRON TRANSFER

One-electron mechanisms in organometallic chemistry N82-17262

Substitution and excited state electron transfer reactions of transition metal complexes in organized media N82-17331

ELECTRON TRANSITIONS

A static screened potential method for the calculation of electronic transition properties of azabenzenes N82-17272

ELECTRONIC COUNTERMEASURES

Defense of radio-electronic equipment
[AD-A108114] N82-17430

ELECTRONIC EQUIPMENT

Singlet-delta molecular oxygen as a tool for selective chemiluminescent detection in chromatography N82-17285

Defense of radio-electronic equipment
[AD-A108114] N82-17430

Mechanical shock test analysis
[DE82-000932] N82-17534

ELECTRONIC EQUIPMENT TESTS

Built-in-test Equipment Requirements Workshop. Workshop presentation
[AD-A107842] N82-17085

Zeeman background correction with an electrothermal graphite braid atomizer N82-17275

High frequency semiconductor testing
[DE82-000926] N82-17445

Thick-film analysis: Literature search and bibliography
[DE82-000960] N82-17447

ELECTRONIC SPECTRA

Excited-state phenomena associated with solvation site heterogeneity N82-17288

ELECTRONS

A model for electrons existing in hybridized narrow and wide bands
[INPE-2127-RPE/351] N82-18042

ELECTROSTATIC PRECIPITATORS

Control of particulate emissions from atmospheric fluidized-bed combustion with fabric filters and electrostatic precipitators
[PB82-115528] N82-17683

ELECTROSTATICS

An iterative method for solving electrostatic problems
[AD-A107740] N82-17956

ELEMENTARY PARTICLE INTERACTIONS

A model for hadronic inclusive cross-sections
[PB82-115205] N82-17983

ELEMENTARY PARTICLES

Computational methods for the nuclear- and neutron-matter problems
[DE82-001584] N82-17981

ELEVATION

Great Lakes water levels, 1980. Daily and monthly average water surface elevations
[PB82-107606] N82-17589

ELEVATORS (LIFTS)

Development of a man and supply hoisting system for underground metal and nonmetal mines, volume 1
[PB82-113366] N82-17583

EMBRITTLEMENT

Mechanisms of corrosion fatigue --- of high strength aluminum alloys N82-17343

Study of grain-boundary segregation using the Auger electron emission technique
[DE82-000789] N82-18051

EMISSION

Assessment and control of chrysotile asbestos emissions from unpaved roads
[PB82-102526] N82-17411

Example emission inventory documentation for 1982 ozone State Implementation Plans (SIPs)
[PB82-101908] N82-17677

EMISSION SPECTRA

In situ analysis of thin layer chromatography plates using an imaging detector N82-17276

A study of extragalactic supernova remnants N82-18087

The role of cyclotron resonance processes in the spectra of accreting neutron stars
[ISSN-0340-8922] N82-18099

H2 emission in molecular clouds N82-18101

EMULSIONS

Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1: Construction of apparatus and preliminary experiments
[AD-A108018] N82-17305

Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408

ENCAPSULATED MICROCIRCUITS

Design, analysis, and test verification of advanced encapsulation systems
[NASA-CR-168407] N82-17604

ENCAPSULATING

Design, analysis, and test verification of advanced encapsulation systems --- low cost solar arrays
[NASA-CR-168408] N82-17605

ENDOCRINE SYSTEMS

Effect of stationary magnetic field on the endocrine system N82-17814

ENDOSCOPES

Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843

ENERGETIC PARTICLES

New energetic materials. Structural characterization
[AD-A107714] N82-17381

Application of eikonal approximation to charge transfer in energetic ion-atom collisions N82-17986

ENERGY

The 18th Project Integration Meeting
[NASA-CR-168431] N82-17614

ENERGY ABSORPTION

Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation N82-17297

ENERGY BANDS

Energy bands and superlattice formation in titanium diselenide N82-18035

ENERGY BUDGETS

Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114206] N82-17582

ENERGY CONSERVATION

Solarization/conservation technology development for existing housing
[DE82-002175] N82-17407

Customer attitudes toward thermal-energy-storage heating
[DE82-003010] N82-17634

Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1981
[PUB-LAW-96-526] N82-18065

Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

ENERGY CONSUMPTION

DOE-2 verification project, phase 1
[LA-8295-MS] N82-17616

Climatic influences of residential energy consumption N82-17742

Energy and climate in South-East Asia and the Western Pacific N82-17764

Study of climate and its applied aspects
N82-17766

Vehicle test report: Electric vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] N82-18066

ENERGY CONVERSION

Luminescent photoelectrochemical cells. 7: Photoluminescent and electroluminescent properties of cadmium sulfo-selenide electrodes
[AD-A107581] N82-17311

Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] N82-17398

The 18th Project Integration Meeting
[NASA-CR-168431] N82-17614

Power fluctuations: Technical and statistical aspects N82-17622

Forecasting wind power output N82-17623

ENERGY CONVERSION EFFICIENCY

Assessment of technical potential: Problems, methods and results N82-17619

ENERGY DISSIPATION

Three dimensional flow field inside compressor rotor, including blade boundary layers
[NASA-CR-168410] N82-17175

A derivation of the small-strain incremental theory of plasticity from thermomechanics
[OUEL-1371/81] N82-17539

ENERGY DISTRIBUTION

Space and time resolved measurements of ion energy distributions by neutral beam injection in TORTUR 2 — toroidal turbulence experiment (TORTUR)
[REPT-81-137] N82-17976

Experimental determination of the electron energy distribution function in plasmas
[INPE-2107-RPE/333] N82-18010

ENERGY METHODS

DOE-2 verification project, phase 1
[LA-8295-MS] N82-17616

ENERGY OF FORMATION

Energy partitioning in the dissociation of cyanogen at 193nm
[AD-A107773] N82-17303

ENERGY POLICY

Meteorological aspects of the utilization of solar radiation as an energy source, part 1
[WMO-557-VOL-1] N82-17644

Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] N82-17645

Meteorological aspects of the utilization of wind as an energy source
[WMO-575] N82-17646

ENERGY SOURCES

Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] N82-17645

ENERGY SPECTRA

Theoretical calculations of power-broadened microwave lineshapes N82-17296

ENERGY STORAGE

Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] N82-17607

Development of zinc-bromine batteries for utility energy storage
[DE82-002114] N82-17635

ENERGY TECHNOLOGY

Water for non-nuclear energy development in the Great Basin
[PB82-116781] N82-17581

Analysis of geopressured aquifers
[PB82-103862] N82-17595

Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] N82-18070

ENERGY TRANSFER

Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307

Energy transport within the Earth's atmosphere ocean system from a climate point of view
N82-17729

Heavy Higgs bosons and their low energy impact
N82-17967

Energy transfer in molecular collisions
N82-17970

The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113

ENGINE AIRFRAME INTEGRATION

Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

ENGINE DESIGN

Influence of correlations and computational methods on the prediction of overall efficiency N82-17180

Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

The influence of new turbine technologies on their components N82-17210

Aerodynamic components for small turboshaft engines N82-17211

Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[ERG-034] N82-17459

Scientific report of the Fluid Mechanics Research Department N82-17469

ENGINE FAILURE

Damage from engine debris projectiles
N82-17165

ENGINE MONITORING INSTRUMENTS

An alternative approach to engineering structures using monitoring systems N82-17223

ENGINE PARTS

Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

Mechanical advances in the design of small turboshaft engines N82-17208

Advanced component development design basis for next generation medium power helicopter engines
N82-17209

Aerodynamic components for small turboshaft engines N82-17211

ENGINE STARTERS

Maintenance posture for quick start
[AD-A107553] N82-17177

ENGINE TESTS

Development test programs adapted to helicopter engines N82-17205

ENVIRONMENT EFFECTS

Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] N82-17584

Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591

Investigation of petroleum in the marine environs of the Strait of Juan de Fuca and Northern Puget Sound, part 2 (second-year continuation)
[PB82-104290] N82-17662

The Delaware River Basin comprehensive (level B) study
[PB82-111477] N82-17679

Impact of Canadian power plant development and flow apportionment on the Poplar River Basin
[PB82-111618] N82-17681

The Potential Atmospheric Impact of Chemicals Released to the Environment: Proceedings of four workshops
[PB82-119447] N82-17686

The nature and scope of climate applications
N82-17757

Increase of atmospheric CO2 and possible climatic changes N82-17763

Energy and climate in South-East Asia and the Western Pacific N82-17764

The nature of drought and strategies to reduce its effects N82-17770

Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806

Physical factors of environment as hygiene problem N82-17848

ENVIRONMENT MANAGEMENT

Dredging management: Data and analysis for the New England/Long Island Sound region
[PB82-111626] N82-17412

ENVIRONMENT MODELS

Watershed model study using LANDSAT data
N82-17602

Great Lakes environmental planning study
[PB82-112970] N82-17682

Energy and climate in South-East Asia and the Western Pacific N82-17764

ENVIRONMENT POLLUTION

Guide for spill prevention control and countermeasure inspectors
[PB82-115296] N82-17670

ENVIRONMENTAL SURVEYS

Manual of ground-water quality sampling procedures
[PB82-103045] N82-17660

Applications of climate information and the United States National Climate Program N82-17765

ENVIRONMENTAL TESTS

Forecasting corrosion damage and maintenance costs for large aircraft N82-17357

ENZYME ACTIVITY

Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes
N82-17820

Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite N82-17832

Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936 N82-17833

Activity of some enzymes of carbonhydrate metabolism in rat skeletal muscles after space flight
N82-17834

ENZYMES

Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847

Effect of hypogeomagnetic field on activity of some cerebral enzymes N82-17853

EPITAXY

Research in LPE of doped LnlbOsub3 and LiTaOsub3 thin films
[AD-A107686] N82-18045

EPOXY MATRIX COMPOSITES

Low temperature behavior of epoxy-rubber particulate composites
[PB82-113499] N82-17388

EPOXY RESINS

The structural formation and physical behaviour of cross-linked epoxy resins
[RAE-LIB-TRANS-2067] N82-17266

EQUATIONS OF MOTION

An investigation of dynamic-analysis methods for variable-geometry structures
[NASA-CR-167498] N82-17522

Necking, fracture and localization of plastic flow in metals N82-17525

Vertical coherent instabilities in bunched particle beams N82-17968

EQUATIONS OF STATE

State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83876] N82-17440

EQUATORIAL ATMOSPHERE

Differential behaviour of the equatorial ionospheres on the eastern and western coasts of the South American continent
[INPE-2237-PRE/024] N82-17710

EQUIPARTITION THEOREM

Origin of the initial inhomogeneities of the universe
[REPT-652] N82-18090

EQUIVALENCE

An operational semantics for bonded nondeterminism equivalent to a denotational one
[MC-IW-169/81] N82-17953

ERROR ANALYSIS

Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105

Change of global climate during recent 100 years
N82-17775

Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] N82-17803

ERROR CORRECTING CODES

A study of high density bit transition requirements versus the effects on BCH error correcting coding
[NASA-CR-161957] N82-17884

ERROR DETECTION CODES
Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105
Retransmission strategies for error control in packet transmission protocols N82-17110
ERROR FUNCTIONS
Stochastic control system parameter identifiability
[NASA-CR-166300] N82-17898
ERYTHROCYTES
Effect of space flights of different duration on energy metabolism of human erythrocytes N82-17817
Facilitated diffusion of small non-electrolytes in the human red blood cell N82-17855
ESTIMATES
Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774
ESTUARIES
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17798
Nearshore marine trace metal geochemistry
[PB82-109372] N82-17804
ETHANE
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294
ETHERS
Improved tack PMR
[NASA-CR-165432] N82-17367
ETHYL ALCOHOL
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] N82-17397
ETHYL COMPOUNDS
Improved tack PMR
[NASA-CR-165432] N82-17367
ETHYLENE
An equation of state for fluid ethylene
[PB82-107673] N82-17325
ETHYLENE COMPOUNDS
Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %)
[AD-A107809] N82-17378
EUCLIDEAN GEOMETRY
Riemannian fibrations of Euclidean spaces N82-17903
EULER-LAGRANGE EQUATION
A rapid estimation of the lifetime of near Earth satellites for mission analysis
[INPE-2158-RPE/377] N82-17246
Fluid-structure coupling in Lagrange-Lagrange and Euler-Lagrange descriptions
[EUR-7424-EN] N82-17952
EUROPIUM
Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307
EUTECTIC COMPOSITES
Zero-gravity growth of a sodium chloride-lithium fluoride eutectic mixture
[NASA-CR-161966] N82-17299
EVALUATION
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
Investigation and evaluation of a computer program to minimize three-dimensional flight time tracks
[NASA-CR-168419] N82-17879
EVAPORATION RATE
Investigation of a laminar two-component boundary layer along an evaporation liquid film by means of a finite difference method
[ESA-TT-711] N82-17136
EVAPORATORS
Production engineering and marketing analysis of the rotating disk evaporator
[PB82-101676] N82-17676
EVOLUTION (DEVELOPMENT)
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696
On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741
Origin of the initial inhomogeneities of the universe
[REPT-652] N82-18090
EXCIMERS
Magnetic circular dichroism and Faraday rotation of cesium-argon excimers and cesium dimers N82-18030
EXCITATION
Effects of temperature on excited-state description of luminescent photoelectrochemical cells employing tellurium-doped cadmium sulfide electrodes
[AD-A107840] N82-17306
Luminescent photoelectrochemical cells. 7: Photoluminescent and electroluminescent properties of cadmium sulfo-selenide electrodes
[AD-A107581] N82-17311
Substitution and excited state electron transfer reactions of transition metal complexes in organized media N82-17331
Investigation of a cascade laser system: The excitations and interactions of N sub 2 in the ultraviolet and the near infrared N82-17503
New excitation and ionization mechanism of ions in dense plasmas: The role of autoionizing states
[IPPJ-549] N82-18009
EXCRETION
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia N82-17824
EXHAUST EMISSION
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks
[PB82-108523] N82-18078
EXHAUST GASES
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] N82-18068
EXHAUST SYSTEMS
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17694
EXOBIOLOGY
Comets, interstellar molecules and the origin of life
[PB82-104274] N82-18108
EXOTHERMIC REACTIONS
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor --- Entrainment Stretching Coherence Interdiffusion Moving Observer (ESCIMO)
[HTS/79/14] N82-17470
EXPANSION
Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036
EXPERIMENTATION
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] N82-17399
EXPLOSIONS
Strength degradation of impact damaged structure. N82-17169
Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter
[NASA-CR-168411] N82-18095
EXPLOSIVE DEVICES
Damage from High explosive (HE) projectiles N82-17164
EXPLOSIVES
New energetic materials. Structural characterization
[AD-A107714] N82-17381
Study of fundamental chemical processes in explosive decomposition by laser-powered homogeneous pyrolysis
[AD-A108022] N82-17393
Application of a high power laser to demilitarization problems
[AD-A106659] N82-17489
EXPONENTIAL FUNCTIONS
Accelerated life testing under competing exponential failure distributions
[AD-A107626] N82-17516
Effect of record length on the correlation of complex exponentials
[AD-A107738] N82-17911
Approximation by a sum of complex exponentials utilizing the pencil of function method
[AD-A107742] N82-17913
P-values for multi-stage and sequential tests
[AD-A108127] N82-17942
EXTERNAL STORES
Technology overview for advanced aircraft armament system program
[AD-A107680] N82-17155
Standardization study for advanced aircraft armament system program
[AD-A107681] N82-17156
EXTERNAL TANKS
Wind tunnel tests of the Space Shuttle foam insulation with simulated debonded regions
[AD-A108079] N82-17250
EXTRACTION
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555

F

F REGION
Observations of large scale F-region irregularities using airflow emissions at 7774 deg A and 6300 deg A
[INPE-2236-PRE/023] N82-17709
F-5 AIRCRAFT
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353
On the Corrosion problems of the TAF F-5 aircraft N82-17354
F-18 AIRCRAFT
F/A-18A tactical airborne computational subsystem N82-17119
F/A-18 weapons system support facilities N82-17120
FABRICATION
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] N82-17508
Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650
FABRICS
The effect of fabric coverings on the acoustic performance of modular absorbers
[BBC-RD-1981/8] N82-17957
FABRY-PEROT SPECTROMETERS
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh
[AD-A107939] N82-17491
FACILITIES
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-168442] N82-17610
FACTOR ANALYSIS
Weighting of distances in factorial analysis
[ENST-C-81005] N82-17543
Performance of activated sludge processes: Reliability, stability and variability
[PB82-109604] N82-17689
FACTORIALS
Weighting of distances in factorial analysis
[ENST-C-81005] N82-17543
FAILURE ANALYSIS
An investigation of the early detection of defects in ball bearings by the vibration monitoring
[NAL-TR-675] N82-17504
Proportional hazards model with time-dependent covariates: Large sample theory and related topics N82-17945
FAILURE MODES
Lubrication breakdown between gear teeth N82-17213
Corrosion in naval aircraft electronic systems N82-17363
Applicability of plane strain fracture toughness testing techniques to polyethylene pipe materials
[MIT-RR-R81-3] N82-17524
Stress intensity for interacting flaws. Part 3: Photoelastic determination of mixed modes; stress intensity factors for interacting flaws
[OUEL-1368/81-PT-3] N82-17542

FALLOUT
Recent injections of nuclear debris in the atmosphere N82-17974
FAR INFRARED RADIATION
Investigation of D2O laser emission at 50, 66, 83, 111, and 116 microns
[IPF-81-6] N82-17502
Experimental correlation and self consistent analysis of an IR, FIR, MW triple resonant system in ammonia N82-17996
FAR ULTRAVIOLET RADIATION
Beam-foil studies of atomic mean-lives in the vacuum ultraviolet N82-17987
FARADAY EFFECT
Phase demodulator with high temporal and angular resolution for the measurement of Faraday rotation by means of a carrier frequency --- in plasma experiments
[IPF-81-4] N82-17441
Magnetic circular dichroism and Faraday rotation of cesium-argon excimers and cesium dimers N82-18030
FARMLANDS
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774
FAST FOURIER TRANSFORMATIONS
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286
Enhancement of poles in spectral analysis
[AD-A107739] N82-17432
FAST TEST REACTORS
Neutron spectra produced by a fast pulse assembly in free field and perturbed environments N82-17992
FASTENERS
Flight-by-flight corrosion fatigue tests N82-17348
FATIGUE (MATERIALS)
Effects of cyclic loading on projectile impact damage N82-17167
Fatigue behavior of fiber-resin composites
[MIT-RR-R81-2] N82-17269
Corrosion Fatigue --- conferences
[AGARD-CP-316] N82-17342
Mechanisms of corrosion fatigue --- of high strength aluminum alloys N82-17343
Fracture mechanics based modelling of the corrosion fatigue process N82-17344
Variable amplitude corrosion fatigue behavior of a low carbon steel N82-17347
Flight-by-flight corrosion fatigue tests N82-17348
Corrosion prevention measures used in the construction of an aircraft airframe: The case of 2014 and 2214 alloys N82-17360
Ultrasonic and mechanical characterizations of fatigue states of graphite epoxy composite laminates
[NASA-CR-3504] N82-17514
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] N82-17643
FATIGUE LIFE
Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521
FATIGUE TESTING MACHINES
An electrical method for the monitoring of fatigue crack growth
[BAE-MDR-044] N82-17518
FATIGUE TESTS
Effects of bearing/bypass load interaction on laminate strength
[AD-A108006] N82-17271
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
FATTY ACIDS
A model for essential hypertension: Metabolic studies N82-17867
FAULT TOLERANCE
Recovery in distributed processing systems N82-17102
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106
SIFT: An ultra-reliable avionic computing system N82-17115
Automated Power Systems Management (APSM)
[NASA-CR-168423] N82-17258
FEASIBILITY
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] N82-17397
FEASIBILITY ANALYSIS
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-106440] N82-17666
FEDERAL BUDGETS
Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1981
[PUB-LAW-96-526] N82-18065
FEED SYSTEMS
Helicopter air inlets N82-17217
Prospects for materials (plastics, elastomers, paints): Volume 1: Plastic materials (appendix 1, plastification systems)
[CETIM-12-B-194-VOL-1] N82-17382
Transport characteristics of alternate slurry fuels
[DE82-003019] N82-17394
FEEDBACK
Multiple-access channels with different generalized feedback signals
[INPE-2221-PRE/017] N82-1[illegible]421
FEEDBACK CONTROL
Development of sensitized pick coal interface detector system
[NASA-CR-161961] N82-17560
COMPLEX ALIGN: A technique for the characteristic locus method of design --- of controllers
[OUEL-1366/81] N82-17925
FERMI SURFACES
The Fermi surface reconstructed momentum density of V3Si from positron annihilation experiments N82-18039
FERROFLUIDS
Bifurcating instability of the free surface of a ferrofluid N82-17473
FEYNMAN DIAGRAMS
Probabilistic treatment of relativistic scattering of scalar particles and their mass spectrum N82-17993
FIBER COMPOSITES
Fatigue behavior of fiber-resin composites
[MIT-RR-R81-2] N82-17269
Improved tack PMR
[NASA-CR-165432] N82-17367
FIBER OPTICS
The traffic flow in a distributed real time computing system (RDC-SYSTEM) with a fiber-optic ringbus system N82-17112
FIBERS
Zero-gravity growth of a sodium chloride-lithium fluoride eutectic mixture
[NASA-CR-161966] N82-17299
FIBERS (MATHEMATICS)
Riemannian fibrations of Euclidean spaces N82-17903
FIBRIN
Studies on structure and function relationship in fibrinogen N82-17859
FIBRINOGEN
Blood fibrinogen as related to immersion in water for seven days and short-term space flight N82-17836
Studies on structure and function relationship in fibrinogen N82-17859
FIELD MODE THEORY
WKB mode summing program for dipole antennas of arbitrary orientation and elevation for VLF/LF propagation. Calculation of VLF/LF field strengths in the earth-ionosphere waveguide
[AD-A107683] N82-17435
FIELD STRENGTH
A digital field strength measuring receiver for l. f. and m. f.
[BBC-RD-1981/7] N82-17474
Acoustic intensity vectors from an infinite plate with line attachments
[AMTE(N)-TM-81086] N82-17958
FIELD THEORY (ALGEBRA)
Regularization procedure for string functionals
[HE-81-16] N82-17906
FIELD THEORY (PHYSICS)
A static screened potential method for the calculation of electronic transition properties of azabenzenes N82-17272
Finite element methods for periodic solutions of dynamical systems N82-17935
Semigroups of column stochastic matrices N82-17955
Canonical quantization of non-abelian gauge theories N82-17963
Interacting quantum field theory in curved space-time N82-18052
Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053
FIGHTER AIRCRAFT
New concepts in multifunctional corrosion for aircraft and other systems N82-17362
Corrosion in naval aircraft electronic systems N82-17363
Transparent polyolefin film armor
[AD-A107562] N82-17377
FIGURE OF MERIT
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279
FILM THICKNESS
Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17282
FILTRATION
The development of a high average power glass laser source
[AD-A107583] N82-17497
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669
FINES
Briquetting of fine coal using a sodium chloride binder
[DE82-000632] N82-17395
FINITE DIFFERENCE THEORY
Finite difference computation of the conical flow field over a delta wing
[VKI-TN-140] N82-17135
Investigation of a laminar two-component boundary layer along an evaporation liquid film by means of a finite difference method
[ESA-TT-711] N82-17136
Axial-flow turbomachine through flow calculation methods N82-17201
Application of multigrid methods for integral equations to two problems from fluid dynamics
[MC-NW-111/81] N82-17919
FINITE ELEMENT METHOD
Axial-flow turbomachine through flow calculation methods N82-17201
PATCHES-3. User's manual
[AD-A107709] N82-17530
Smoothing and coarse grid approximation properties of multigrid methods
[MC-NW-110/81] N82-17918
Finite element methods for periodic solutions of dynamical systems N82-17935
FIRE CONTROL
Technology overview for advanced aircraft armament system program
[AD-A107680] N82-17155
Standardization study for advanced aircraft armament system program
[AD-A107681] N82-17156
FLAKING
An investigation of the early detection of defects in ball bearings by the vibration monitoring
[NAL-TR-675] N82-17504
FLAME PROPAGATION
Influence of strain on flame propagation in laminar flow
[PB82-114588] N82-17322
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor --- Entrainment Stretching Coherence Interdiffusion Moving Observer (ESCIMO)
[HTS/79/14] N82-17470
FLAME SPECTROSCOPY
Investigation of spectroscopic properties of flames and plasmas via computer controlled instrumentation N82-17326
FLAPPING HINGES
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640

Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641

FLAT PLATES
Analysis of the curved junction edge between a flat plate and a prolate spheroid
[AD-A106543] N82-17130

FLEXIBLE BODIES
On the shape and orientation control of an orbiting shallow spherical shell structure
[NASA-CR-168420] N82-17243

FLEXIBLE WINGS
Optimal dolphin hang glider flight N82-17157

FLIGHT CONTROL
Stage-state reliability analysis technique
N82-17104
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106
Reconfiguration: A method to improve systems realiability N82-17107
An investigation of multi-axis isometric side-arm controllers in a variable stability helicopter
[AD-A106759] N82-17226
Parallel computation for developing nonlinear control procedures
[AD-A107914] N82-17227

FLIGHT FATIGUE
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2
[AD-A107803] N82-17877

FLIGHT HAZARDS
The explanation of ball lightning N82-17786

FLIGHT MECHANICS
Applications of stochastic differential equations in flight mechanics
[MBB-UA-589-81-O] N82-17159

FLIGHT PLANS
Investigation and evaluation of a computer program to minimize three-dimensional flight time tracks
[NASA-CR-166419] N82-17879

FLIGHT SAFETY
Active beacon collision avoidance logic evaluation. Volume 2: Collision avoidance (BCAS) threat phase
[AD-A107805] N82-17148

FLIGHT SIMULATION
A simple hybrid visual simulation for research flight simulators
[ESA-TT-690] N82-17232

FLIGHT SIMULATORS
A simple hybrid visual simulation for research flight simulators
[ESA-TT-690] N82-17232

FLIGHT STRESS (BIOLOGY)
Cardiac output and cardiac cycle phase structure of pilots during flights N82-17821

FLIGHT TEST INSTRUMENTS
Development of a simple, self-contained flight test data acquisition system
[NASA-CR-168436] N82-17478

FLIGHT TESTS
Differential Omega system development and evaluation
[AD-A107857] N82-17146
Development test programs adapted to helicopter engines N82-17205
An investigation of multi-axis isometric side-arm controllers in a variable stability helicopter
[AD-A106759] N82-17226
Natural and HISS cloud droplet data as sampled during the 1980 - 1981 AEFA/Saint Paul field program
[AD-A107577] N82-17784

FLIGHT TIME
Investigation and evaluation of a computer program to minimize three-dimensional flight time tracks
[NASA-CR-168419] N82-17879

FLIGHT TRAINING
Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man N82-17827
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

FLOODS
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591

FLORIDA
The significance of tropical cyclone rainfall in the water supply of south Florida N82-1[illegible]47
Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596
The characterization and evolution of carbonate tidal deltas, upper Florida Keys N82-17796

FLOW CHARACTERISTICS
Development of a computer based presentation of non-steady helicopter rotor flows
[AD-A108107] N82-17131
Rotor flow research in low speed helicopter flight
[AD-A107873] N82-17132
Review of performance prediction methods
N82-17179
Survey on diffusion factors and profile losses
N82-17186
Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774
Interactions of comets with the solar wind and solar radiation N82-18103

FLOW DISTRIBUTION
Surveys of flow-field around empennage of the NAL STOL-research-aircraft model
[NAL-TR-677] N82-17124
Influence of correlations and computational procedures on flow field predictions N82-17181
Cambridge turbine: Geometry, test data and sample calculation N82-17182
Scale-model studies for the improvement of flow patterns of a low-speed tunnel
[NASA-CR-169413] N82-17228
The coherent structure of turbulent mixing layers. 1: Similarity of the primary vortex structure. 2: Secondary streamwise vortex structure
[AD-A106049] N82-17465
Streamwise vorticity decay downstream of a three dimensional protuberance
[AD-A106080] N82-17466
Program FINSUP: Steady and unsteady supersonic flow in cascades by a finite element method
[PB82-114612] N82-17472
A velocity vector measuring system with 13 asymmetric wedge type yawmeters --- measuring flow distribution around the empennage of STOL models
[NAL-TR-674] N82-17477

FLOW EQUATIONS
Comparison of rezone algorithms for incompressible fluid flow calculations
[LOG-J12823] N82-17452

FLOW GEOMETRY
Method for calculating three-dimensional flow in bladed turbomachine by using arbitary quasi perpendicular intersecting planes
[AD-A106475] N82-17467

FLOW MEASUREMENT
Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184
Hannover Turbine. Geometry, test data and sample calculation N82-17185
Single stage transonic compressor and equivalent plane cascade N82-17196
Axial-flow turbomachine through flow calculation methods N82-17201
Multicomponent continuous flow kinetic analysis
N82-17280
Fluid flow and gas dispersion in stirred tank reactors N82-17457
Large-scale oceanographic variations in the western North Pacific N82-17778

FLOW REGULATORS
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900883] N82-17508

FLOW THEORY
Multicomponent continuous flow kinetic analysis
N82-17280
Inelastic buckling of columns of L and U cross section --- calculated using a flow boundary formulation
[ESA-TT-709] N82-17544

FLOW VELOCITY
The two stage aero engine turbine N82-17183
End-wall boundary layer calculation methods
N82-17188
Investigation of spectroscopic properties of flames and plasmas via computer controlled instrumentation
N82-17326

FLOW VISUALIZATION
Cambridge turbine: Geometry, test data and sample calculation N82-17182
Underwater flow visualization methods in the upper layer of the ocean
[AD-A107919] N82-17801
Shaded computer graphic techniques for visualizing and interpreting analytic fluid flow models
[NASA-CR-168418] N82-17880

FLOWMETERS
Multicomponent continuous flow kinetic analysis
N82-17280

FLUES
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17684

FLUID BOUNDARIES
A radio-frequency moving-boundary detector and its application N82-17328

FLUID DYNAMICS
A theoretical study of three-body correlations in atomic fluids N82-17989

FLUID FILMS
Investigation of a laminar two-component boundary layer along an evaporation liquid film by means of a finite difference method
[ESA-TT-711] N82-17136
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108895] N82-17667

FLUID FILTERS
Initial assessment of selected advanced lubricating oil filters
[DE82-002420] N82-17506

FLUID FLOW
Multicomponent continuous flow kinetic analysis
N82-17280
Fluid flow and gas dispersion in stirred tank reactors N82-17457
Shaded computer graphic techniques for visualizing and interpreting analytic fluid flow models
[NASA-CR-168418] N82-17880
Fluid-structure coupling in Lagrange-Lagrange and Euler-Lagrange descriptions
[EUR-7424-EN] N82-17952

FLUID INJECTION
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] N82-17507
Evaluation of alternatives in downhole steam generation
[DE82-001943] N82-17574
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] N82-17576

FLUID JETS
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555

FLUID MECHANICS
Bifurcating instability of the free surface of a ferrofluid N82-17473

FLUIDIZED BED PROCESSORS
Control of particulate emissions from atmospheric fluidized-bed combustion with fabric filters and electrostatic precipitators
[PB82-115526] N82-17683

FLUORESCENCE
In situ analysis of thin layer chromatography plates using an imaging detector N82-17276
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279
Picosecond studies of solvent-solute interactions
N82-17290
Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307
The development of a high average power glass laser source
[AD-A107582] N82-17496

Photodissociation of metal-halides: Lasers, absorption lineshape, and polarization of fluorescence studies N82-17990

FLUORIDES

Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %)
[AD-A107809] N82-17378

FLUTTER ANALYSIS

Theory and experiment in unsteady aerodynamics
[NLR-MP-80046-U] N82-17126

FLUX DENSITY

Commentary on Soviet-French Aureole-3 satellite N82-17236

High latitude dayside precipitating electron regions during the Southern hemisphere summer and their dependence of IMF and K sub p
[IPS-81-4] N82-17717

FLY BY WIRE CONTROL

The development of asynchronous multiprocessor concepts for flight control system applications N82-17091

FOAMS

Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] N82-17507

Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575

Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658

FOLDING

The kinematic and metamorphic development of the Towaliga-Goat Rock mylonites, Georgia-Alabama N82-17730

FORCED CONVECTION

Fling-off cooling of straight spur gears --- oil cooling of the meshing zone
[WTHD-136] N82-17510

FORECASTING

Energy environment study
[NASA-CR-168458] N82-17654

Climate applications to agricultural problems N82-17759

Increase of atmospheric CO2 and possible climatic changes N82-17763

Energy and climate in South-East Asia and the Western Pacific N82-17764

Applications of climate information and the United States National Climate Program N82-17765

The provision of climatic information for agriculture in the USSR N82-17767

Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774

Change of global climate during recent 100 years N82-17775

FORESTS

Moisture stress and mid-tropospheric circulation patterns influencing the forest-prairie transition in south central United States N82-17743

FORMATIONS

Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733

FORMING TECHNIQUES

Prospects for materials (plastics, elastomers, paints). Volume 4: Plastic materials (appendix 2, automation and evolution of equipment for forming plastic materials)
[CETIM-12-B-194-VOL-4] N82-17385

Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553

FORTRAN

NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916

FOSSIL FUELS

Briquetting of fine coal using a sodium chloride binder
[DE82-000632] N82-17395

A project to test for shale gas in Ohio
[DE82-000916] N82-17572

Evaluation of alternatives in downhole steam generation
[DE82-001943] N82-17574

FOSSILS

The biostratigraphy and taxonomy of Mesozoic radiolaria from the Samail Ophiolite and Hawasina Complex, Oman N82-17728

FOUNDATIONS

Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410

FOURIER TRANSFORMATION

Energy transfer in molecular collisions N82-17970

Long range intermolecular potentials from static form factors N82-17975

FRACTURE MECHANICS

Fracture mechanics based modelling of the corrosion fatigue process N82-17344

Applicability of linear elastic fracture mechanics to rigid PVC pipe materials
[MIT-RR-R81-1] N82-17523

Necking, fracture and localization of plastic flow in metals N82-17525

Survey of advanced fracture-mechanics test methods
[DE82-000623] N82-17535

Load capacity of notched components as derived from post-yield fracture criteria --- for failure analysis of reactor components
[ISD-286] N82-17538

Stress intensity for interacting flaws. Part 2: A literature survey of fracture criteria
[OUEL-1367/81-PT-2] N82-17541

FRACTURE STRENGTH

The influence of notch length and ligament length on the toughness of boron fiber reinforced aluminum
[DFVLR-FB-81-22] N82-17270

An electrical method for the monitoring of fatigue crack growth
[BAE-MDR-044] N82-17518

Applicability of plane strain fracture toughness testing techniques to polyethylene pipe materials
[MIT-RR-R81-3] N82-17524

Dynamic elastic-plastic characterization of nuclear pressure vessel material
[CISE-1693] N82-17528

FRACTURES (MATERIALS)

Stress intensity for interacting flaws. Part 2: A literature survey of fracture criteria
[OUEL-1367/81-PT-2] N82-17541

FRACTURING

Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity
[AD-A107617] N82-17371

Applicability of linear elastic fracture mechanics to rigid PVC pipe materials
[MIT-RR-R81-1] N82-17523

A project to test for shale gas in Ohio
[DE82-000916] N82-17572

FRAGMENTATION

Damage from engine debris projectiles N82-17165

Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114206] N82-17582

FRAGMENTS

Damage from engine debris projectiles N82-17165

FRANCE

Helicopter development in France N82-17216

FREDHOLM EQUATIONS

Application of multigrid methods for integral equations to two problems from fluid dynamics
[MC-NW-111/81] N82-17919

The iterative solution of a non-linear Fredholm integral equation arising from a chemical reactor problem
[MATHS-RES-156] N82-17924

FREE ELECTRON LASERS

Note on planar undulator wiggler single electron motion
[AD-A108051] N82-17493

FREE ELECTRONS

Angle-resolved photoemission study of Co-Co (0001)
[AD-A107575] N82-17304

The distribution of free electrons in the inner galaxy from pulsar dispersion measures
[NASA-TM-83875] N82-18096

FREE ENERGY

A derivation of the small-strain incremental theory of plasticity from thermomechanics
[OUEL-1371/81] N82-17539

FREE RADICALS

Investigations of elementary reactions of the NHZ radical with a chemical radical source
[MPIS-2/1981] N82-17319

FREEZING

The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746

FRENCH SATELLITES

Commentary on Soviet-French Aureole-3 satellite N82-17236

FRENCH SPACE PROGRAMS

Commentary on Soviet-French Aureole-3 satellite N82-17236

FREQUENCY CONVERTERS

A 10kW series resonant converter design, transistor characterization, and base-drive optimization
[NASA-CR-165546] N82-17439

FREQUENCY STABILITY

Vertical coherent instabilities in bunched particle beams
[DE82-003246] N82-17979

FRESH WATER

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm N82-17601

FRETTING CORROSION

Fracture mechanics based modelling of the corrosion fatigue process N82-17344

FRICTION

Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521

FRICTION MEASUREMENT

Magnetic bearing reaction wheel tests --- performed on a three-axis air bearing simulator
[ESA-TT-699] N82-17511

FRICTION REDUCTION

Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521

FRONTS (METEOROLOGY)

Subsynoptic-scale baroclinic instability
[INPE-2241-PRE/027] N82-17745

FROST

The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746

FUEL CELLS

Hydrodynamic ram damage N82-17166

Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] N82-17615

Development of a solar-energy system
[DE81-030531] N82-17633

FUEL COMBUSTION

Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1: Construction of apparatus and preliminary experiments
[AD-A108018] N82-17305

FUEL CONSUMPTION

CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] N82-17174

Synfuel modified diesel
[DE82-002298] N82-17400

Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

A method for estimating fuel consumption and vehicle emissions on urban arterials and networks
[PB82-108523] N82-18078

FUEL INJECTION

Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396

FUEL OILS

Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396

Energy environment study
[NASA-CR-168458] N82-17654

FUEL PRODUCTION

Develop solar fuels and chemicals technology and perform supporting systems analysis
[DE81-023960] N82-17318

Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401

Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402

FUEL PUMPS
Transport characteristics of alternate slurry fuels
[DE82-003019] N82-17394
FUEL SPRAYS
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396
FUEL TESTS
Synfuel modified diesel
[DE82-002298] N82-17400
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] N82-18068
FUNCTIONAL ANALYSIS
Rigorous high speed separation of zeros of Riemann's zeta function
[MC-NW-113/81] N82-17921
FUNCTIONAL INTEGRATION
Regularization procedure for string functionals
[HE-81-16] N82-17906
Functional integral approach to classical statistical dynamics N82-18006
FUNCTIONS (MATHEMATICS)
Compound function and linear model methods for the multivariate analysis of ordinal categorical data
N82-17937
Fundamental order relations on regular semigroups N82-17950
FURNACES
Promotion of utilizing primary energy and reduction of emission with grate-equipped heat generators fired completely automatic with solid fuels
[BMFT-FB-T-81-222] N82-17391
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] N82-17455
FUSELAGES
Analysis of the curved junction edge between a flat plate and a prolate spheroid
[AD-A106543] N82-17130

G

GALACTIC RADIATION
A search for halos around spiral galaxies
N82-18082
GALACTIC STRUCTURE
Two-dimensional photometry of planetary nebulae
N82-18083
GALLIUM
Quantitative determination of zero-gravity effects on electronic materials processing germanium crystal growth with simultaneous interface demarcation experiment MA-060, section 5
[NASA-CR-161964] N82-18044
GALLIUM COMPOUNDS
Defect structure in the alkali-gallate fast ion conductors N82-18033
GAMMA RAY BURSTS
The role of cyclotron resonance processes in the spectra of accreting neutron stars
[ISSN-0340-8922] N82-18099
GAMMA RAY SPECTRA
Computerized gamma spectrum analysis with application to multicomponent activation detectors
N82-17301
GAMMA RAYS
Gamma-ray instrumentation and its uses in space
N82-17241
Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments
[INPE-2119-RPE/343] N82-17711
GAS ANALYSIS
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] N82-17552
A study of extragalactic supernova remnants
N82-18087
GAS CHROMATOGRAPHY
Singlet-delta molecular oxygen as a tool for selective chemiluminescent detection in chromatography
N82-17285
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286
GAS DETECTORS
The chemistry and detection of nickel carbonyl
N82-17278
GAS EVOLUTION
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] N82-17552
GAS EXCHANGE
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600
GAS FLOW
Investigation of spectroscopic properties of flames and plasmas via computer controlled instrumentation
N82-17326
Fluid flow and gas dispersion in stirred tank reactors N82-17457
Analysis of geopressured aquifers
[PB82-103662] N82-17595
H2 emission in molecular clouds N82-18101
GAS IONIZATION
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
GAS LASERS
Investigation of D2O laser emission at 50, 66, 83, 111, and 116 microns
[IPF-81-6] N82-17502
GAS MIXTURES
Separation of gas mixtures by selective extraction
[PB82-103639] N82-17324
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054
GAS PRESSURE
Kinetic processes in high pressure gases: Excited state collisions
[AD-A106126] N82-17490
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054
GAS TEMPERATURE
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054
GAS TRANSPORT
Experimental investigations of gas transport systems
[MPIS-30/1980] N82-17468
GAS TURBINE ENGINES
Influence of correlations and computational methods on the prediction of overall efficiency N82-17180
The two stage aero engine turbine N82-17183
Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203
Helicopter propulsion systems: Past, present and future N82-17204
Aircraft turbine engine development: Current practices and new priorities N82-17206
Future technology and requirements for helicopter engines N82-17207
Mechanical advances in the design of small turboshaft engines N82-17208
Advanced component development design basis for next generation medium power helicopter engines
N82-17209
Aerodynamic components for small turboshaft engines N82-17211
Regenerative helicopter engines: Advances in performance and expected development problems
N82-17212
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[ERG-034] N82-17459
GAS TURBINES
Hannover Turbine. Geometry, test data and sample calculation N82-17185
Review of NASA progress in thermal barrier coatings for stationary gas turbines
[NASA-TM-81716] N82-17335
Method for calculating three-dimensional flow in bladed turbomachine by using arbitary quasi perpendicular intersecting planes
[AD-A106475] N82-17467
GAS-GAS INTERACTIONS
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor --- Entrainment Stretching Coherence Interdiffusion Moving Observer (ESCIMO)
[HTS/79/14] N82-17470
GAS-METAL INTERACTIONS
Energy transfer in molecular collisions
N82-17970
GASEOUS DIFFUSION
Uniaxial model for a gas loaded variable conductance heat pipe
[NLR-TR-80048-U] N82-17462
An improved flat front model for a gas loaded variable conductance heat pipe
[NLR-TR-80049-U] N82-17463
GASES
Analysis of geopressured aquifers
[PB82-103662] N82-17595
GASIFICATION
Land biomass program
[PB82-117391] N82-17405
GASOHOL (FUEL)
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] N82-17397
GAUGE THEORY
Canonical quantization of non-abelian gauge theories N82-17963
GEAR TEETH
Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203
Lubrication breakdown between gear teeth
N82-17213
Advanced transmission component development
N82-17214
Fling-off cooling of straight spur gears --- oil cooling of the meshing zone
[WTHD-136] N82-17510
GEARS
Advanced transmission component development
N82-17214
GELATION
Investigation of in-situ gelation to control emissions from abandoned hazardous waste sites
[PB82-103506] N82-17409
GENERAL AVIATION AIRCRAFT
Aircraft icing avoidance and protection
[PB82-108135] N82-17139
GENETICS
Cytologic and biochemical genetic effects of chemical carcinogens
[AD-A107615] N82-17864
GEOCHEMISTRY
Global tectonic control of secular variations in phanerozoic sedimentary rock/ocean/atmosphere chemistry N82-17545
Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica
N82-17546
Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695
Geology and geochemistry of sphalerite in coal
N82-17702
Deposition and diagenesis of Glauconite Sandstone, Berrymore-Lobstick-Bigoray area, South Central Alberta: A study of physical chemistry of cementation N82-17703
On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116706] N82-17725
Geology, mineralogy, and geochemistry of the McClure Mountain alkalic complex, Fremont County, Colorado N82-17731
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations
N82-17732
GEOCHRONOLOGY
The biostratigraphy and taxonomy of Mesozoic radiolaria from the Samail Ophiolite and Hawasina Complex, Oman N82-17726
GEODESY
Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] N82-17706
GEODETIC COORDINATES
Some results of numerical experiments on the computation of the Kootwijk and Wettzell satellite laser ranging station coordinates
[VTH-M-409] N82-17499
GEODETIC SURVEYS
Photogrammetry software. A package for everyone
[AD-A106096] N82-17570

GEOGRAPHY

The PAIGH Gazetteer program
[AD-A107549] N82-17566

GEOLOGICAL SURVEYS

Bangui anomaly
[WORK-M-45] N82-17556

Water resources data for Utah, water year 1980
[PB82-108606] N82-17587

Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] N82-17629

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] N82-17715

GEOLOGY

Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696

Geology and geochemistry of sphalerite in coal N82-17702

On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116708] N82-17725

Geology, mineralogy, and geochemistry of the McClure Mountain alkalic complex, Fremont County, Colorado N82-17731

Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733

GEOMAGNETIC HOLLOW

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] N82-17715

GEOMAGNETISM

Commentary on Soviet-French Aureole-3 satellite N82-17236

Differential behaviour of the equatorial ionospheres on the eastern and western coasts of the South American continent
[INPE-2237-PRE/024] N82-17710

Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch
[NASA-TM-83868] N82-17714

High latitude dayside precipitating electron regions during the Southern hemisphere summer and their dependence of IMF and K sub p
[IPS-81-4] N82-17717

Climatic change and social disturbance N82-17773

Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan N82-17852

Effect of hypogeomagnetic field on activity of some cerebral enzymes N82-17853

GEOMETRY

NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916

GEOMORPHOLOGY

Rates and implications of bluff recession along the Lake Michigan shorezone of Michigan and Wisconsin N82-17548

GEOPHYSICAL SATELLITES

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] N82-17715

GEOPHYSICS

Institute director discusses KRT-10 and other space antennas N82-17240

Global tectonic control of secular variations in phanerozoic sedimentary rock/ocean/atmosphere chemistry N82-17545

Toward global monitoring of the ionosphere in real time by a modern ionosonde network: The geophysical requirements and technological opportunity
[PB82-108444] N82-17723

The thermo-mechanical properties of the oceanic lithosphere N82-17808

Solar-geophysical data number 442. Part 2: Comprehensive reports, Data for December 1980, November 1979, miscellanea
[PB82-108337] N82-18114

Solar-geophysical data number 442. Part 2: Prompt reports, Data for May 1981, April 1981 and late data
[PB82-108329] N82-18115

GEOPRESSURE

Analysis of geopressured aquifers
[PB82-103862] N82-17595

GEOSYNCHRONOUS ORBITS

Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations
[NASA-TM-58233] N82-17609

GEOSYNCLINES

High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001078] N82-17577

GEOTECHNICAL ENGINEERING

Limit state design in geotechnical engineering
[PB82-113440] N82-17418

GEOTEMPERATURE

Terrestrial heat flow overlying the Andean subduction zone N82-17738

GEOTHERMAL ENERGY EXTRACTION

Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] N82-17629

GEOTHERMAL TECHNOLOGY

Analysis of geopressured aquifers
[PB82-103862] N82-17595

GERMANIUM

Quantitative determination of zero-gravity effects on electronic materials processing germanium crystal growth with simultaneous interface demarcation experiment MA-060, section 5
[NASA-CR-161964] N82-18044

GERT

A continuous shading scheme for two-variable mapping N82-17939

GLACIERS

Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica N82-17546

GLASS

Glass shell manufacturing in space
[NASA-CR-161972] N82-17233

Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307

Stress corrosion of ceramic materials
[AD-A108045] N82-17380

GLASS FIBERS

Fatigue behavior of fiber-resin composites
[MIT-RR-R81-2] N82-17269

GLASS LASERS

The development of a high average power glass laser source
[AD-A107582] N82-17496

The development of a high average power glass laser source
[AD-A107583] N82-17497

GLAZES

An experimental study of airfoil icing characteristics
[NASA-TM-82790] N82-17083

Transparent polyolefin film armor
[AD-A107562] N82-17377

Electron beam/laser glazing of iron-base materials
[AD-A107559] N82-17492

GLIDE PATHS

Optimal dolphin hang glider flight N82-17157

GLOBAL ATMOSPHERIC RESEARCH PROGRAM

Report of the second session of the Joint Scientific Committee N82-17720

Report of the third session of the West African Monsoon Experiment (WAMEX) scientific regional committee — conference proceedings, 10-14 Nov. 1980
[GARP-SPEC-REPT-37] N82-17721

GLOBAL POSITIONING SYSTEM

DOT should terminate further LORAN-C development and modernization and exploit the potential of the NAVSTAR/Global Positioning System
[AD-A107768] N82-17143

GLUONS

Canonical quantization of non-abelian gauge theories N82-17963

GOLD

The structural consequences of transition metal basicity: Investigation of various gold complexes N82-17332

Polymer coated electrodes as microelectrochemical media N82-17366

GOVERNMENT PROCUREMENT

Technology and oceanography: An assessment of federal technologies for oceanographic research and monitoring
[PB82-101718] N82-17807

GOVERNMENT/INDUSTRY RELATIONS

NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069

GRAIN BOUNDARIES

Electronic structure of grain boundaries and interfaces in polycrystalline zinc oxide
[AD-A107864] N82-18046

Study of grain-boundary segregation using the Auger electron emission technique
[DE82-000789] N82-18051

GRAMMARS

An underlying context-free grammar of ALGOL 68 plus
[MC-IW-171/81] N82-17891

An operator-priority grammer for ALGOL 68 plus
[MC-IW-173/81] N82-17893

GRANTS

DOE's alcohol fuels awards process resulted in questionable award selections and limited small business success
[AD-A106665] N82-17392

NASA's University Program: Active projects, fiscal year 1981
[NASA-TM-84416] N82-18055

GRANULAR MATERIALS

Organic grains and the spectrum of the galatic centre source IRS 7 — IR source (IRS)
[PREPRINT-58] N82-17265

Granular activated carbon installations
[PB82-102492] N82-17659

GRAPHITE

Zeeman background correction with an electrothermal graphite braid atomizer N82-17275

GRAPHITE-EPOXY COMPOSITES

Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites
[NASA-CR-168421] N82-17267

Effects of bearing/bypass load interaction on laminate strength
[AD-A108006] N82-17271

Adhesives for field repair of graphite/epoxy composite structures
[AD-A107870] N82-17376

Ultrasonic and mechanical characterizations of fatigue states of graphite epoxy composite laminates
[NASA-CR-3504] N82-17514

GRAPHITE-POLYIMIDE COMPOSITES

Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159115] N82-17519

GRASSLANDS

Moisture stress and mid-tropospheric circulation patterns influencing the forest-prairie transition in south central United States N82-17743

GRATINGS (SPECTRA)

Optical propagation through horizontally stratified, quasi-sinusoidal, phase gratings N82-17997

GRAVITATIONAL COLLAPSE

Gravitational wave generation by stellar core collapse N82-18093

GRAVITATIONAL EFFECTS

Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640

Crystal growth from the vapor phase experiment MA-085, section 7
[NASA-CR-161965] N82-18043

GRAVITY ANOMALIES

Bangui anomaly
[WORK-M-45] N82-17556

Gravity maps of Central Africa N82-17557

Seismic study of the Bangui anomaly N82-17559

GREAT BASIN (US)

Water for non-nuclear energy development in the Great Basin
[PB82-116781] N82-17581

GREAT LAKES (NORTH AMERICA)

Great Lakes water levels, 1980. Daily and monthly average water surface elevations
[PB82-107608] N82-17589

Great Lakes environmental planning study
[PB82-112970] N82-17682

GREENHOUSES
Community solar demonstration/dissemination center
[DE82-000994] N82-17632

GROUND BASED CONTROL
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17875
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104

GROUND SUPPORT SYSTEMS
Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems N82-17150
Scientific report of the Fluid Mechanics Research Department N82-17469

GROUND WATER
Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica N82-17546
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] N82-17564
Nitrogen in ground water and surface water from sewered and unsewered areas, Nassau County, Long Island, New York
[PB82-109886] N82-17586
Manual of ground-water quality sampling procedures
[PB82-103045] N82-17660
Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695
Climate, climate data, and water resources N82-17758

GROUND WAVE PROPAGATION
Acoustic ground impedance meter
[NASA-TM-83227] N82-17476

GROUND WIND
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan N82-17753
Variations in the thermal structure and wind field occurring in the western Indian Ocean during the monsoons
[AD-A107761] N82-17800

GROUP DYNAMICS
Climatic change and social disturbance N82-17773

GULF OF MEXICO
Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806

H

HADRONS
The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961
A model for hadronic inclusive cross-sections
[PB82-115205] N82-17963
A space-time study of double scattering in hadron deuteron collisions N82-17985
Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053

HALF LIFE
Experimental investigations of gas transport systems
[MPIS-30/1980] N82-17468
Beam-foil studies of atomic mean-lives in the vacuum ultraviolet N82-17987

HALOS
Optical and infrared search for massive halos of galaxies N82-18086

HAMILTONIAN FUNCTIONS
Unimolecular isomerization dynamics and instabilities: RRKM theory N82-17291
Finite element methods for periodic solutions of dynamical systems N82-17935
Nuclear matter with realistic Hamiltonians N82-17971

HANDBOOKS
Before the well runs dry: A handbook on drought management
[PB82-105818] N82-17579
Before the well runs dry: A handbook for designing a local water conservation plan
[PB82-105826] N82-17580

HANDICAPS
Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1981
[PUB-LAW-96-526] N82-18065

HANG GLIDERS
Optimal dolphin hang glider flight N82-17157

HARMONIC ANALYSIS
Multivariate harmonic new better than used in expectation distributions
[AD-A106125] N82-17941

HARMONIC FUNCTIONS
Harmonic and anharmonic properties of diamond structure crystals with application to the calculation of the thermal expansion of silicon
[NASA-CR-168437] N82-18041

HAZARDS
Application of a high power laser to demilitarization problems
[AD-A106659] N82-17489
Study of air compressor hazards in underground and surface mines
[PB82-105184] N82-17597

HEAT ACCLIMATIZATION
Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

HEAT FLUX
A durable, intermediate temperature, direct reading heat flux transducer for measurements in continuous wind tunnels
[AD-A107729] N82-17483
Sensitivity of a climatologically-driven sea ice model to the ocean heat flux
[NASA-TM-83877] N82-17799

HEAT MEASUREMENT
A durable, intermediate temperature, direct reading heat flux transducer for measurements in continuous wind tunnels
[AD-A107729] N82-17483

HEAT PIPES
Uniaxial model for a gas loaded variable conductance heat pipe
[NLR-TR-80048-U] N82-17462
An improved flat front model for a gas loaded variable conductance heat pipe
[NLR-TR-80049-U] N82-17463

HEAT PUMPS
Development of an absorption heat pump system operating with primary energy to heat apartment buildings. Dual components mixture R 22-E 181
[BMFT-FB-T-81-208] N82-17454
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[ERG-034] N82-17459

HEAT RESISTANT ALLOYS
Sulfur in the corrosion of superalloys
[AD-A107867] N82-17337

HEAT STORAGE
Development of a solar-energy system
[DE81-030531] N82-17633
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] N82-17634
Thermal stratification in storage tanks N82-17649

HEAT TRANSFER
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001086] N82-17406
Turbulent boundary layer heat transfer experiments: Convex curvature effects including introduction and recovery
[NASA-CR-3510] N82-17456
Energy transport within the Earth's atmosphere ocean system from a climate point of view N82-17729
Ocean's role in processes of short-range climatic variation formation N82-17779
Ocean influence on climate formation and changes N82-17780

HEAT TRANSFER COEFFICIENTS
NASA/Rockwell International Space Shuttle orbiter yaw heating test (OH-108)
[AD-A107703] N82-17251

HEAT TRANSMISSION
Terrestrial heat flow overlying the Andean subduction zone N82-17738
Sensitivity of a climatologically-driven sea ice model to the ocean heat flux
[NASA-TM-83877] N82-17799

HEATING
Electron cyclotron resonance heating of tandem mirrors at relativistic energies
[AD-A107944] N82-18016

HEATING EQUIPMENT
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] N82-17399
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] N82-17634

HEAVY IONS
Measurement of heavy ion components in a hydrogen plasma by CO2 laser scattering with coherent detection
[IPF-81-5] N82-18024

HEISENBERG THEORY
The cluster approach to the magnetic susceptibilities of low-dimensional copper clusters N82-17333

HELICOPTER CONTROL
An investigation of multi-axis isometric side-arm controllers in a variable stability helicopter
[AD-A106759] N82-17226

HELICOPTER DESIGN
The armed helicopter in air to air missions
[MBB-UD-317-81-O] N82-17158
Design Criteria of the A 129 helicopter drive system N82-17215
Helicopter development in France N82-17216
Helicopter propulsions systems. 1: Vibration prevention systems on helicopters 2: Problem of noise in the cabin N82-17222
Future requirements for helicopter propulsion systems N82-17225

HELICOPTER ENGINES
Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203
Helicopter propulsion systems: Past, present and future N82-17204
Development test programs adapted to helicopter engines N82-17205
Aircraft turbine engine development: Current practices and new priorities N82-17206
Future technology and requirements for helicopter engines N82-17207
Mechanical advances in the design of small turboshaft engines N82-17208
Advanced component development design basis for next generation medium power helicopter engines N82-17209
The influence of new turbine technologies on their components N82-17210
Aerodynamic components for small turboshaft engines N82-17211
Regenerative helicopter engines: Advances in performance and expected development problems N82-17212
Helicopter air inlets N82-17217
Intake design with particular reference to ice protection and particle seperators N82-17218
The distress regime on the bimotored helicopter N82-17219
Engine/drive/airframe compatibility: A way of life N82-17220
Problems of engine response during transient maneuvers N82-17221
An alternative approach to engineering structures using monitoring systems N82-17223
Component research for future propulsion systems N82-17224
Future requirements for helicopter propulsion systems N82-17225

HELICOPTER PERFORMANCE
Problems of engine response during transient maneuvers N82-17221
An alternative approach to engineering structures using monitoring systems N82-17223
Component research for future propulsion systems N82-17224
Natural and HISS cloud droplet data as sampled during the 1980 - 1981 AEFA/Saint Paul field program
[AD-A107577] N82-17784

HELICOPTER PROPELLER DRIVE
Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

Lubrication breakdown between gear teeth
N82-17213
Advanced transmission component development
N82-17214
Design Criteria of the A 129 helicopter drive system N82-17215
Engine/drive/airframe compatibility: A way of life
N82-17220
Future requirements for helicopter propulsion systems N82-17225

HELICOPTER WAKES
Development of a computer based presentation of non-steady helicopter rotor flows
[AD-A108107] N82-17131
Rotor flow research in low speed helicopter flight
[AD-A107873] N82-17132
Non-steady velocity measurement of the wake of a helicopter rotor at low advance ratios
[AD-A107722] N82-17133

HELICOPTERS
Blade planform for a quiet helicopter
[NASA-CR-166256] N82-17121
Assessment of historical and projected segments of US and World civil and military rotorcraft markets 1960 - 1990
[NASA-CR-166151] N82-17137
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871

HELIOS 2
Statistical properties of MHD fluctuations associated with high speed streams from HELIOS 2 observations
[IPS-81-5] N82-18117

HELIUM ATOMS
Electronic excitation of helium and krypton by electron impact N82-18032

HELIUM ISOTOPES
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] N82-17552

HEMODYNAMIC RESPONSES
Jugular, right atrial pressure and cerebral hemodynamics of healthy man submitted to postural tests N82-17825

HEMODYNAMICS
Age related distinctions of cosmonauts regional hemodynamics N82-17829

HETEROGENEITY
Excited-state phenomena associated with solvation site heterogeneity N82-17268

HEURISTIC METHODS
A simple heuristic approach to simplex efficiency
[AD-A107913] N82-17915

HIERARCHIES
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106

HIGH ALTITUDE BALLOONS
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-168442] N82-17610

HIGH ALTITUDE ENVIRONMENTS
Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

HIGH FREQUENCIES
HF propagation assessment studies over paths in the Atlantic
[AD-A107599] N82-17436

HIGH POWER LASERS
Application of a high power laser to demilitarization problems
[AD-A106659] N82-17489

HIGH PRESSURE
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] N82-17174
High pressure nuclear magnetic resonance studies of viscous fluids N82-17289
Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1: Construction of apparatus and preliminary experiments
[AD-A108019] N82-17305
Kinetic processes in high pressure gases: Excited state collisions
[AD-A108128] N82-17490
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575

HIGH SPEED CAMERAS
Hypervelocity impact instrumentation development
[AD-A107852] N82-17484

HIGH STRENGTH ALLOYS
Superplastic aluminum evaluation
[AD-A107760] N82-17338

HIGH VOLTAGES
Experimental investigation of the influence of high voltages on the performance of a plasma focus --- as regards neutron yield
[IPF-81-2] N82-18023

HILBERT SPACE
Parameter estimation in a reproducing kernel Hilbert space for linear hereditary systems N82-17932

HISTORIES
Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772
Climatic change and social disturbance
N82-17773
Further studies on the climatic change during historical times in China N82-17776

HOLOGRAPHIC INTERFEROMETRY
Holographic interferometry of transparent media with reflection from imbedded test objects
[NASA-CR-168395] N82-17475
Optical propagation through horizontally stratified, quasi-sinusoidal, phase gratings N82-17997

HOMING
Optical data processing for missile guidance
[AD-A107592] N82-17145
Study of homing pigeons in Brazil: Some preliminary results
[INPE-2248-PRE/032] N82-17839

HOMING DEVICES
Multiple target tracking with an AM reticule seeker
[AD-A107854] N82-18000

HONEYCCMB STRUCTURES
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353
The experience of corrosion on French military aerodynes N82-17355

HONG KONG
Regionality of climatic change in monsoon Asia
N82-17777

HORIZONTAL ORIENTATION
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] N82-17639

HORSEPOWER
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] N82-18066

HOT-FILM ANEMOMETERS
Rotor flow research in low speed helicopter flight
[AD-A107873] N82-17132
Non-steady velocity measurement of the wake of a helicopter rotor at low advance ratios
[AD-A107722] N82-17133

HOT-WIRE ANEMOMETERS
Influence of strain on flame propagation in laminar flow
[PB82-114568] N82-17322

HUDSON RIVER (NY-NJ)
Nearshore marine trace metal geochemistry
[PB82-109372] N82-17804

HUMAN BEINGS
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861

HUMAN FACTORS ENGINEERING
Psycho-social aspects of productivity in underground coal mining
[NASA-CR-168429] N82-17551
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17875
DOT/FAA Human Factors Workshop on Aviation. Transcript, vol 1
[AD-A107802] N82-17876
DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2
[AD-A107803] N82-17877

HUMAN PERFORMANCE
Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

HUMAN REACTIONS
Noise impact on communities from aircraft
[GPO-80-617] N82-17855

HUMIDITY
Model size and humidity effects on selected calibration parameters for the 16-ft transonic wind tunnel at AEDC
[AD-A107728] N82-17230

HYBRID CIRCUITS
Thick-film analysis: Literature search and bibliography
[DE82-000960] N82-17447

HYBRID NAVIGATION SYSTEMS
On the shape and orientation control of an orbiting shallow spherical shell structure
[NASA-CR-168420] N82-17243

HYDRATION
Effects of surface morphology and chemical composition on the durability of adhesively bonded aluminum structures
[AD-A107684] N82-17373

HYDRAULIC CONTROL
Extension of the soil conservation service rainfall-runoff methodology for ungaged watersheds
[PB82-111394] N82-17680

HYDRAULIC EQUIPMENT
Surveys of flow-field around empennage of the NAL STOL-research-aircraft model
[NAL-TR-677] N82-17124

HYDROBROMIC ACID
Development of a solar-energy system
[DE81-030531] N82-17633

HYDROCARBON FUELS
A project to test for shale gas in Ohio
[DE82-000916] N82-17572

HYDROCARBONS
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317
Investigation of petroleum in the marine environs of the Strait of Juan de Fuca and Northern Puget Sound, part 2 (second-year continuation)
[PB82-104290] N82-17682

HYDROCHLORIDES
A comparison of in-cloud HCl concentrations from the NASA/MSFC MDM to measurements for the space shuttle launch
[NASA-CR-167497] N82-17653

HYDROCRACKING
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401

HYDRODYNAMIC EQUATIONS
Review of the lower hybrid drift instability and its saturation mechanisms
[AD-A107550] N82-18016

HYDRODYNAMIC RAM EFFECT
Hydrodynamic ram damage N82-17166

HYDRODYNAMICS
High pressure nuclear magnetic resonance studies of viscous fluids N82-17289
Inverse axisymmetric body study
[AD-A107662] N82-17464

HYDROELECTRIC POWER STATIONS
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] N82-17678

HYDROGEN
H2 emission in molecular clouds N82-18101

HYDROGEN BONDS
Hydrogen bonding in asphaltenes and coal liquids
[DE82-001131] N82-17312

HYDROGEN OXYGEN FUEL CELLS
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] N82-17607

HYDROGEN PLASMA
Measurement of heavy ion components in a hydrogen plasma by CO2 laser scattering with coherent detection
[IPF-81-5] N82-18024

HYDROGENATION
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402

HYDROGEOLOGY
Analysis of geopressured aquifers
[PB82-103662] N82-17595

HYDROGRAPHY
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591

HYDROLOGY
Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica
N82-17546
The significance of tropical cyclone rainfall in the water supply of south Florida N82-17547
Water resources data for Utah, water year 1980
[PB82-108606] N82-17587
Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17698
The provision of climatic information for agriculture in the USSR N82-17767
The nature of drought and strategies to reduce its effects N82-17770

HYDROLOGY MODELS
Watershed model study using LANDSAT data
N82-17602
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17698

HYDROPHONES
USRD type F63 transducer
[AD-A106748] N82-17959

HYDROXYL COMPOUNDS
Removing water-soluble hazardous material spills from waterways with carbon
[PB82-103813] N82-17661

HYPERFINE STRUCTURE
Photon echo modulation in LaF3:Pr3+ --- praseodymium doped lanthanum trifluoride
N82-17995

HYPERSPACES
F-purity and rational singularity N82-17936

HYPERTENSION
A model for essential hypertension: Metabolic studies N82-17867

HYPERVELOCITY IMPACT
Description of projectile threats N82-17161
Hydrodynamic ram damage N82-17166
Hypervelocity impact instrumentation development
[AD-A107852] N82-17484

HYPODYNAMIA
Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes
N82-17820
Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936 N82-17833
Activity of some enzymes of carbonhydrate metabolism in rat skeletal muscles after space flight
N82-17834

HYPOKINÉSIA
Human lipid metabolism during confinement in pressure chamber N82-17822
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824

HYPOTHESES
Hypothesis testing in contingency tables with small samples N82-17946

HYPOXIA
Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man N82-17827
Method of assessing individual resistance of rats to hypoxic hypoxia N82-17837

I

ICE
Spectral reflectances of freshwater ice and snow from 340 through 1100 nm N82-17601

ICE FORMATION
An experimental study of airfoil icing characteristics
[NASA-TM-82790] N82-17063
Aircraft icing avoidance and protection
[PB82-108135] N82-17139
Intake design with particular reference to ice protection and particle separators N82-17218
Simulation of ice-cover growth and thermal decay on the upper St. Lawrence River N82-17550
Sea-ice formation services in the world
[WMO-574] N82-17578
Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114208] N82-17582
Natural and HISS cloud droplet data as sampled during the 1980 - 1981 AEFA/Saint Paul field program
[AD-A107577] N82-17784
Sensitivity of a climatologically-driven sea ice model to the ocean heat flux
[NASA-TM-83877] N82-17799

ICE MAPPING
Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] N82-17563

ICE PREVENTION
Aircraft icing avoidance and protection
[PB82-108135] N82-17139

IGNITION
Asymptotic methods especially in combustion
[AD-A108023] N82-17308

IMAGE PROCESSING
The representation of image texture
[AD-A107636] N82-17264
Activities report of the Antennas, Propagation and Digital Image-Processing Group: Research in progress N82-17425
High resolution 3-D wavelength diversity imaging
[AD-A107832] N82-17480
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17888
Two-dimensional photometry of planetary nebulae
N82-18083

IMAGE RECONSTRUCTION
Holographic interferometry of transparent media with reflection from imbedded test objects
[NASA-CR-168395] N82-17475

IMAGING TECHNIQUES
In situ analysis of thin layer chromatography plates using an imaging detector N82-17276
Shaded computer graphic techniques for visualizing and interpreting analytic fluid flow models
[NASA-CR-168418] N82-17890
Computer interpretation of a dynamic image from a moving vehicle
[AD-A107565] N82-17885

IMPACT DAMAGE
Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160
Description of projectile threats N82-17161
Analysis methods for predicting structural response to projectile impact N82-17162
Analysis methods for ballistic damage size and type N82-17163
Damage from High explosive (HE) projectiles
N82-17164
Damage from engine debris projectiles
N82-17165
Hydrodynamic ram damage N82-17166
Effects of cyclic loading on projectile impact damage N82-17167
Stiffness degradation of impact damaged structure
N82-17168
Strength degradation of impact damaged structure
N82-17169
Analysis of multiple load path panels containing impact damage N82-17170

IMPACT STRENGTH
Strength degradation of impact damaged structure
N82-17169
Analysis of multiple load path panels containing impact damage N82-17170
Mechanical shock test analysis
[DE82-000932] N82-17534

IMPACT TESTS
Development status of the 'Adhesion of Metals' experiment and of the UHV Chamber facility
[CISE-1700] N82-17336

IMPACT TOLERANCES
Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160
Analysis methods for predicting structural response to projectile impact N82-17162

IMPEDANCE MATCHING
Impedance matching for long cables carrying ultrasonic signals
[AD-A107935] N82-17444

IMPEDANCE PROBES
Acoustic ground impedance meter
[NASA-TM-83227] N82-17476

IN-FLIGHT MONITORING
Development of a simple, self-contained flight test data acquisition system
[NASA-CR-168436] N82-17478
Cardiac output and cardiac cycle phase structure of pilots during flights N82-17821

INCINERATORS
NATO-CCMS pilot study on disposal of hazardous wastes. Project: Thermal treatment. Project leader: Federal Republic of Germany
[PB82-114521] N82-17691

INCOHERENT SCATTERING
An overview on incoherent scatter observations of mid-latitude sporadic E and further comments for improved data analysis
[INPE-2247-PRE/031] N82-17422
Chemical fluctuations and incoherent scattering theory in the terrestrial D region
[AERONOMICA-ACTA-A-233-1981] N82-17704

INCOMPRESSIBLE FLOW
Cambridge turbine: Geometry, test data and sample calculation N82-17182
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190
Comparison of rezone algorithms for incompressible fluid flow calculations
[LOG-J12823] N82-17452

INCOMPRESSIBLE FLUIDS
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 1: Theoretical aspects
[EUR-7427/I-EN-VOL-1] N82-17460
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 2: User's manual
[EUR-7427/II-EN-VOL-2] N82-17461

INCREASING
Evolutionary variations of solar luminosity
N82-18112

INDEXES (DOCUMENTATION)
NASA's University Program: Active projects, fiscal year 1981
[NASA-TM-84416] N82-18055

INDIA
The summer monsoon rains over South and East Asia and West Pacific N82-17771

INDICATING INSTRUMENTS
A radio-frequency moving-boundary detector and its application N82-17328

INDIUM COMPOUNDS
Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365
Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

INDIUM PHOSPHIDES
Preparation of InP by solution and melt growth techniques
[AD-A107646] N82-18047

INDUCTION HEATING
Microwave plasma source for neutral-beam injection systems
[DE81-029122] N82-18020

INDUSTRIAL PLANTS
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] N82-17397

INDUSTRIAL SAFETY
Study of air compressor hazards in underground and surface mines
[PB82-105164] N82-17597

INDUSTRIAL WASTES
Attenuation of polybrominated biphenyls and hexachlorobenzene by Earth materials [PB82-107558] N82-17663
NATO-CCMS pilot study on disposal of hazardous wastes. Project: Thermal treatment. Project leader: Federal Republic of Germany [PB82-114521] N82-17691
NATO-CCMS pilot study on disposal of hazardous wastes: Metal finishing wastes. Project leader: France [PB82-114554] N82-17694

INDUSTRIES
Minerals yearbook, 1978-79. Volume 2: Area reports, Domestic [PB82-105248] N82-17598

INELASTIC SCATTERING
Scattering of electrons by hydrogenic ions N82-17962
Orbiting effects in the inelastic scattering of protons to the continuum [DE82-002287] N82-17980
Elastic and inelastic scattering of 800 MeV/c K+/- mesons from carbon-12 and calcium-40 N82-17991

INERTIAL GUIDANCE
Proceedings of the Tenth Biennial Guidance Test Symposium, Volume 1 [AD-A107612] N82-17147

INERTIAL NAVIGATION
Proceedings of the Tenth Biennial Guidance Test Symposium, Volume 1 [AD-A107612] N82-17147

INERTIAL PLATFORMS
Proceedings of the Tenth Biennial Guidance Test Symposium, Volume 1 [AD-A107612] N82-17147

INFILTRATION
Infiltration land treatment of stabilization pond effluent [PB82-109919] N82-17652

INFORMATION DISSEMINATION
Census of US Civil aircraft, calender year 1980 [AD-A106675] N82-17084
The PAIGH Gazetteer program [AD-A107549] N82-17568
Community solar demonstration/dissemination center [DE82-000994] N82-17632
Public requirements for weather information and attitudes concerning weather service [PB82-109117] N82-17791

INFORMATION FLOW
The PAIGH Gazetteer program [AD-A107549] N82-17568
Open Systems Interconnection (OSI) reference model (Aug. 1981) (ISO second Draft Proposal (DP) 7498) [AD-A107644] N82-17882

INFORMATION MANAGEMENT
CIMS: The Cartographic Information Management System [AD-A108108] N82-17571

INFORMATION RETRIEVAL
Federal requirements for a Federal information processing standards data dictionary system [PB82-117607] N82-18060

INFORMATION SYSTEMS
Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems N82-17150
Digital Avionics Information System (DAIS) documentation [AD-A108000] N82-17172
CIMS: The Cartographic Information Management System [AD-A108108] N82-17571
Sea-ice formation services in the world [WMO-574] N82-17578
Applications of climate information and the United States National Climate Program N82-17765
Open Systems Interconnection (OSI) reference model (Aug. 1981) (ISO second Draft Proposal (DP) 7498) [AD-A107644] N82-17882
A survey of standardization efforts of coded character sets for text processing [PB82-105891] N82-18061

INFRARED ABSORPTION
Organic grains and the spectrum of the galatic centre source IRS 7 --- IR source (IRS) [PREPRINT-58] N82-17265

INFRARED DETECTORS
Moderate temperature detector development [NASA-CR-167504] N82-17998
Optical and infrared search for massive halos of galaxies N82-18066

INFRARED IMAGERY
Arabian sea project of 1980: Composites of infrared images [AD-A107910] N82-17567

INFRARED LASERS
Optical characterization of thin metallic and semiconducting films in the far infrared --- pumpd infrared lasers N82-18037

INFRARED RADIATION
Calibration of pyroelectric radiometers for infrared flare measurements [AD-A107646] N82-17481

INFRARED SCANNERS
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699

INFRARED SPECTRA
Cavity lifetime phase-shift method for sensitive reflectance measurements at mid-infrared wavelengths [ATR-82(8448)-1] N82-17423
Experimental correlation and self consistent analysis of an IR, FIR, MW triple resonant system in ammonia N82-17996
Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053

INFRARED SPECTROSCOPY
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286

INFRARED TRACKING
Multiple target tracking with an AM reticule seeker [AD-A107854] N82-18000

INHOMOGENEITY
Origin of the initial inhomogeneities of the universe [REPT-652] N82-18090

INJECTION MOLDING
Prospects for materials (plastics, elastomers, paints): Volume 1: Plastic materials (appendix 1, plastification systems) [CETIM-12-B-194-VOL-1] N82-17382
Prospects for materials (plastics, elastomers, paints). Volume 3: Plastic materials (appendix 3, computer assisted design approach to injection molds) [CETIM-12-B-194-VOL-3] N82-17384

INJECTORS
Multicomponent continuous flow kinetic analysis N82-17280

INLAND WATERS
Streamflow assessment for counties [PB82-102450] N82-17592

INLET FLOW
Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187

INSPECTION
The ultrasonic inspection of C.F.C. --- carbon fiber sine wave spars [MDR-0465] N82-17513
Comparison between reliability, sensitivity and accuracy of nondestructive inspection methods [NLR-MP-81009-U] N82-17515
Guide for spill prevention control and countermeasure inspectors [PB82-115296] N82-17670

INSTRUMENT APPROACH
Requirements for instrument approaches to converging runways [AD-A108075] N82-17144
Survey of 101 US airports for new multiple instrument approach concepts --- runways [AD-A107812] N82-17229

INSTRUMENT LANDING SYSTEMS
Requirements for instrument approaches to converging runways [AD-A108075] N82-17144
Investigation of Wilcox model 585B very high frequency omnidirectional radio range (VOR) system, part 3 [AD-A107855] N82-17149

INTAKE SYSTEMS
Helicopter Propulsion Systems [AGARD-CP-302] N82-17203
Intake design with particular reference to ice protection and particle separators N82-17218

INTEGRAL EQUATIONS
Vertical coherent instabilities in bunched particle beams N82-17968

INTEGRATED CIRCUITS
Total-dose radiation effects data for semiconductor devices, volume 2 [NASA-CR-168428] N82-17254

INTERACTIVE CONTROL
Person-by-person optimal solution to the decentralised LOG stochastic control problem with control sharing information pattern [PB82-113457] N82-17944

INTERFACE STABILITY
Mathematical models in nuclear-reactor thermal hydraulics [HTS/81/3] N82-17994
Initial interface standards for rapid transit car subsystem components [PB82-104704] N82-18074

INTERFACES
Functional versus communication structures in modern avionic systems N82-17092
Engine/drive/airframe compatibility: A way of life N82-17220

INTERFEROMETRY
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286

INTERGALACTIC MEDIA
A study of extragalactic supernova remnants N82-18087

INTERGRANULAR CORROSION
Study of grain-boundary segregation using the Auger electron emission technique [DE82-000789] N82-18051

INTERMEDIATE FREQUENCIES
A digital field strength measuring receiver for l. f. and m. f. [BBC-RD-1981/7] N82-17474

INTERMOLECULAR FORCES
Energy transfer in molecular collisions N82-17970
Long range intermolecular potentials from static form factors N82-17975

INTERNAL COMBUSTION ENGINES
Initial assessment of selected advanced lubricating oil filters [DE82-002420] N82-17506

INTERNATIONAL COOPERATION
USSR report: Space, no. 14 [JPRS-79711] N82-17235
Commentary on Soviet-French Aureole-3 satellite N82-17236
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238

INTERNATIONAL TRADE
Energy environment study [NASA-CR-168458] N82-17654

INTERPLANETARY MAGNETIC FIELDS
High latitude dayside precipitating electron regions during the Southern hemisphere summer and their dependence of IMF and K sub p [IPS-81-4] N82-17717
Three-dimensional shape and position of Venus's bow shock [REPT-656] N82-18102
Statistical properties of MHD fluctuations associated with high speed streams from HELIOS 2 observations [IPS-81-5] N82-18117

INTERPLANETARY MEDIUM
Radial evolution of power spectra of interplanetary Alfvenic turbulence [IPS-81-13] N82-18097

INTERPOLATION
Definition of the MAROTS reflector meriden line by interpolation: Application to optical measurements [ESA-TT-696] N82-18003

INTERPROCESSOR COMMUNICATION
Functional versus communication structures in modern avionic systems N82-17092
Distributed and decentralized control in fully distributed processing systems N82-17101

A reconfigurable change network for distributed process control N82-17106

Protocol level modules for cost effective standard computer communication N82-17109

The traffic flow in a distributed real time computing system (RDC-SYSTEM) with a fiber-optic ringbus system N82-17112

Dispersed sensor processing mesh project --- avionics N82-17113

Next generation military aircraft will require hierarchical/multilevel information transfer systems --- packet switching N82-17114

SIFT: An ultra-reliable avionic computing system N82-17115

Intercomputer transportation of assembly language software through decompilation [AD-A107[illegible]45] N82-17881

Open Systems Interconnection (OSI) reference model (Aug. 1981) (ISO second Draft Proposal (DP) 7498) [AD-A107644] N82-17882

Routing in networks [AD-A107841] N82-17895

INTERSECTIONS

Analysis of the curved junction edge between a flat plate and a prolate spheroid [AD-A106543] N82-17130

INTERSTELLAR CHEMISTRY

Comets, interstellar molecules and the origin of life [PB82-104274] N82-18108

INTERSTELLAR EXTINCTION

Gravitational wave generation by stellar core collapse N82-18093

INTERSTELLAR GAS

Comets, interstellar molecules and the origin of life [PB82-104274] N82-18108

INTERSTELLAR MATTER

Components in the interstellar medium N82-18094

Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter [NASA-CR-168411] N82-18095

The distribution of free electrons in the inner galaxy from pulsar dispersion measures [NASA-TM-83875] N82-18096

Comets, interstellar molecules and the origin of life [PB82-104274] N82-18108

INTERSTELLAR RADIATION

Components in the interstellar medium N82-18094

INTERSTELLAR SPACE

Components in the interstellar medium N82-18094

INTESTINES

The role of intestinal nerves in the nutrient induced intestinal hyperemia N82-17869

INVESTMENT CASTING

An investment mold for titanium casting [PB82-104662] N82-17419

IO

The present picture of Io's electrodynamic coupling with the magnetosphere of Jupiter [IPS-81-6] N82-18107

IODINE COMPOUNDS

Comparative evaluation of antimicrobial activity of some urine preservatives N82-17830

ION ACOUSTIC WAVES

Two-dimensional interaction of ion-acoustic solitons N82-17969

The dynamics of microprocesses and current turbulent heating of ions in Uragan-2 stellarator [IPPJ-548] N82-18008

ION BEAMS

The construction of a neutral molecular beam facility and its application to mass spectrometers carried on space vehicles N82-17244

Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

ION CURRENTS

Some analytical aspects of field desorption mass spectrometry N82-17274

ION DENSITY (CONCENTRATION)

Components in the interstellar medium N82-18094

ION EXCHANGE RESINS

Investigation of in-situ gelation to control emissions from abandoned hazardous waste sites [PB82-103506] N82-17409

ION EXCHANGING

Formation constant and photolabeling of gramicidin channels in lipid bilayer membranes N82-17277

Some mechanisms of calcium transport by the cardiac sarcolemma N82-17810

ION PRODUCTION RATES

Some analytical aspects of field desorption mass spectrometry N82-17274

ION SELECTIVE ELECTRODES

Modeling chemical systems to improve analytical responses N82-17283

ION TEMPERATURE

Space and time resolved measurements of ion energy distributions by neutral beam injection in TORTUR 2 --- toroidal turbulence experiment (TORTUR) [REPT-81-137] N82-17976

The dynamics of microprocesses and current turbulent heating of ions in Uragan-2 stellarator [IPPJ-548] N82-18008

IONIC COLLISIONS

Scattering of electrons by hydrogenic ions N82-17962

Application of eikonal approximation to charge transfer in energetic ion-atom collisions N82-17986

IONIC REACTIONS

Molecular beam studies of low energy reactions [AD-A108096] N82-17977

IONIZATION

An overview on incoherent scatter observations of mid-latitude sporadic E and further comments for improved data analysis [INPE-2247-PRE/031] N82-17422

IONIZATION COEFFICIENTS

New excitation and ionization mechanism of ions in dense plasmas: The role of autoionizing states [IPPJ-549] N82-18009

IONIZED GASES

Recommended values of transport cross sections for elastic collision and total collision cross section of electrons in atomic and molecular gases [IPPJ-AM-19] N82-18007

IONIZING RADIATION

Total-dose radiation effects data for semiconductor devices, volume 2 [NASA-CR-168428] N82-17254

Solar Power Satellites [PB82-108846] N82-17647

IONOSONDES

HF propagation assessment studies over paths in the Atlantic [AD-A107599] N82-17436

A stepped-frequency HF radar for ionospheric diagnostics [AD-A107810] N82-17718

Toward global monitoring of the ionosphere in real time by a modern ionosonde network: The geophysical requirements and technological opportunity [PB82-108444] N82-17723

IONOSPHERE

USSR report: Space, no. 14 [JPRS-79711] N82-17235

Commentary on Soviet-French Aureole-3 satellite N82-17236

Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237

Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238

The plasma ion composition in the high-latitude magnetospheric boundary layer according to Prognoz-7 data [REPT-658] N82-17697

Differential behaviour of the equatorial ionospheres on the eastern and western coasts of the South American continent [INPE-2237-PRE/024] N82-17710

Toward global monitoring of the ionosphere in real time by a modern ionosonde network: The geophysical requirements and technological opportunity [PB82-108444] N82-17723

Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection [PB82-113283] N82-17805

IONOSPHERIC DISTURBANCES

Observations of large scale F-region irregularities using airflow emissions at 7774 deg A and 6300 deg A [INPE-2236-PRE/023] N82-17709

A stepped-frequency HF radar for ionospheric diagnostics [AD-A107810] N82-17718

IONOSPHERIC ELECTRON DENSITY

An overview on incoherent scatter observations of mid-latitude sporadic E and further comments for improved data analysis [INPE-2247-PRE/031] N82-17422

IONOSPHERIC PROPAGATION

WKB mode summing program for dipole antennas of arbitrary orientation and elevation for VLF/LF propagation. Calculation of VLF/LF field strengths in the earth-ionosphere waveguide [AD-A107683] N82-17435

HF propagation assessment studies over paths in the Atlantic [AD-A107599] N82-17436

Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection [PB82-113283] N82-17805

IONS

Scattering of electrons by hydrogenic ions N82-17962

IRON COMPOUNDS

The chemistry and detection of nickel carbonyl N82-17278

IRRADIANCE

Calibration of pyroelectric radiometers for infrared flare measurements [AD-A107648] N82-17481

Beam broadening in dense scattering media --- laser irradiation of biological tissue [MBB-UA-583-81-O] N82-18002

Steady-state planar ablative flow [AD-A107601] N82-18017

IRRADIATION

Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation N82-17297

Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy [MBB-UA-581-81-O] N82-17843

IRRITATION

Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA) [AD-A107574] N82-17840

ISLAND ARCS

The seismicity of forearc marginal wedges (accretionary prisms) and seismotectonics of convergent margins N82-17726

ISOMERIZATION

Unimolecular isomerization dynamics and instabilities: RRKM theory N82-17291

ISOTHERMAL PROCESSES

Investigations of elementary reactinns of the NHZ radical with a chemical radical source [MPIS-2/1981] N82-17319

ISOTOPIC LABELING

Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600

ISOTROPIC MEDIA

A correction to the engineering theory of elastic stability [OUEL-1376/81] N82-17540

ISOTROPISM

Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036

ITERATION

An iterative method for solving electrostatic problems [AD-A107740] N82-17956

ITERATIVE SOLUTION

Smoothing and coarse grid approximation properties of multigrid methods [MC-NW-110/81] N82-17918

Application of multigrid methods for integral equations to two problems from fluid dynamics [MC-NW-111/81] N82-17919

J

JAPAN

Regionality of climatic change in monsoon Asia N82-17777

JET AIRCRAFT
Forecasting corrosion damage and maintenance costs for large aircraft N82-17357
Corrosion control measures for military aircraft: Present UK requirements and future developments N82-17358
Corrosion prevention methods developed from direct experience with aerospace structures N82-17359

JET ENGINE FUELS
Energy environment study
[NASA-CR-168458] N82-17654

JET ENGINES
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] N82-17174

JET STREAMS (METEOROLOGY)
Tropical easterly jet and contribution of interacting atmospheric waves in monsoon region N82-17756

JOINTS (JUNCTIONS)
Effects of bearing/bypass load interaction on laminate strength
[AD-A108006] N82-17271
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159115] N82-17519

JOURNAL BEARINGS
Performance of PTFE-lined composite journal bearings
[NASA-TM-82779] N82-17263

JUPITER (PLANET)
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83861] N82-18106

JUPITER ATMOSPHERE
Voyager 1 assessment of Jupiter's planetary magnetic field
[NASA-TM-83862] Nb2-18105
The present picture of Io's electrodynamic coupling with the magnetosphere of Jupiter
[IPS-81-6] N82-18107

K

KALMAN FILTERS
Kalman filter satellite orbit improvement using laser ranging measurements from a single tracking station
[VTH-M-414] N82-17501

KENTUCKY
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82183] N82-17715

KERNEL FUNCTIONS
Stability analysis of numerical methods for Volterra integral equations with polynomial convolution kernels
[MC-NW-109/81] N82-17917
Parameter estimation in a reproducing kernel Hilbert space for linear hereditary systems N82-17932

KINETIC ENERGY
Three dimensional flow field inside compressor rotor, including blade boundary layers
[NASA-CR-168410] N82-17175
Angle-resolved photoemission study of Co-Co (0001)
[AD-A107575] N82-17304
Heavy Higgs bosons and their low energy impact N82-17967
Molecular beam studies of low energy reactions
[AD-A108099] N82-17977

KINETICS
Multicomponent continuous flow kinetic analysis N82-17280
Spectroscopy of molecular plasmas and kinetics of excited states
[LP-187] N82-18025

KLEIN-GORDON EQUATION
On L sub p-decay and scattering for nonlinear Klein-Gordon equations
[CTH-MATH-1981-17] N82-17929

KRAMERS-KRONIG FORMULA
Generalization of Kramers-Kronig transforms and some approximations of relations between viscoelastic quantities
[MS-1569] N82-17951

KRYPTON ISOTOPES
Electronic excitation of helium and krypton by electron impact N82-18032

L

LAGOONS
Evaluation of a treatment lagoon for combined sewer overflow
[PB82-105214] N82-17671

LAGRANGE COORDINATES
Fluid-structure coupling in Lagrange-Lagrange and Euler-Lagrange descriptions
[EUR-7424-EN] N82-17952

LAGRANGE MULTIPLIERS
Heavy Higgs bosons and their low energy impact N82-17967

LAGRANGIAN EQUILIBRIUM POINTS
Material on the dynamics of Earth-Moon systems: Planetary libration, fundamentals
[MITT-155] N82-18098

LAKE MICHIGAN
Rates and implications of bluff recession along the Lake Michigan shorezone of Michigan and Wisconsin N82-17548

LAKE ONTARIO
Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114208] N82-17582

LAKES
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600

LAMINAR BOUNDARY LAYER
Investigation of a laminar two-component boundary layer along an evaporation liquid film by means of a finite difference method
[ESA-TT-711] N82-17136

LAMINAR FLOW
Influence of strain on flame propagation in laminar flow
[PB82-114566] N82-17322
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 1: Theoretical aspects
[EUR-7427/I-EN-VOL-1] N82-17460
CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 2: User's manual
[EUR-7427/II-EN-VOL-2] N82-17461
Inverse axisymmetric body study
[AD-A107662] N82-17464

LAMINATES
Effects of bearing/bypass load interaction on laminate strength
[AD-A108006] N82-17271
Transparent polyolefin film armor
[AD-A107562] N82-17377
Ultrasonic and mechanical characterizations of fatigue states of graphite epoxy composite laminates
[NASA-CR-3504] N82-17514
Stress analysis and test philosophy for wind energy converter blades
[NBB-UD-300-80-O] N82-17536

LAND MOBILE SATELLITE SERVICE
Satellite applications to electric-utility communications needs --- land mobile satellite service
[NASA-CR-168430] N82-17253

LAND USE
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] N82-17594

LANDAU-GINZBURG EQUATIONS
Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036

LANDFILLS
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] N82-17672
NATO-CCMS pilot study on disposal of hazardous wastes. Project: Landfill research. Project leader: Canada
[PB82-114547] N82-17693

LANDFORMS
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696

LANGUAGE PROGRAMMING
Intercomputer transportation of assembly language software through decompilation
[AD-A107645] N82-17881

LANTHANUM FLUORIDES
Photon echo modulation in LaF3:Pr3+ --- praseodymium doped lanthanum trifluoride N82-17995

LARGE SPACE STRUCTURES
Control system design for the large space systems technology reference platform
[NASA-CR-168426] N82-17255
Advanced space system analysis software. Technical, user, and programmer guide
[NASA-CR-165798] N82-17256
An investigation of dynamic-analysis methods for variable-geometry structures
[NASA-CR-167498] N82-17522

LASER ANEMOMETERS
Development and laboratory testing of a thermal emission velocimeter for application to an erosion nose tip test facility
[AD-A107713] N82-17482

LASER APPLICATIONS
Hypervelocity impact instrumentation development
[AD-A107852] N82-17484
Electron beam/laser glazing of iron-base materials
[AD-A107559] N82-17492
Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843
The laser accelerator-another unicorn in the garden
[PB82-115197] N82-17962

LASER CUTTING
Application of a high power laser to demilitarization problems
[AD-A108659] N82-17489

LASER MATERIALS
Steady-state planar ablative flow
[AD-A107801] N82-18017

LASER OUTPUTS
A 16 muon CO2 bending mode laser system
[DE81-030123] N82-17498

LASER PLASMAS
Steady-state planar ablative flow
[AD-A107801] N82-18017

LASER PUMPING
The development of a high average power glass laser source
[AD-A107582] N82-17496
The development of a high average power glass laser source
[AD-A107583] N82-17497

LASER RANGE FINDERS
Some results of numerical experiments on the computation of the Kootwijk and Wettzell satellite laser ranging station coordinates
[VTH-M-409] N82-17499
Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500
Kalman filter satellite orbit improvement using laser ranging measurements from a single tracking station
[VTH-M-414] N82-17501
Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] N82-17708

LASER SPECTROSCOPY
Laser spectroscopy of molecular beams N82-17293
Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh
[AD-A107939] N82-17491
Photodissociation of metal-halides: Lasers, absorption lineshape, and polarization of fluorescence studies N82-17990

LASER TARGETS
Glass shell manufacturing in space
[NASA-CR-161972] N82-17233

LASERS
Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307
LASING
Beam broadening in dense scattering media --- laser irradiation of biological tissue
[MBB-UA-583-81-O] N82-18002
LATERAL STABILITY
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
LATEX
Synthesis of fungicidal vinyl and acrylic latices by emulsion polymerization
[AD-A107848] N82-17372
LEACHING
Attenuation of polybrominated biphenyls and hexachlorobenzene by Earth materials
[PB82-107558] N82-17663
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] N82-17672
LEAD (METAL)
Solderability improvements for drag soldered PWBs
[DE82-000961] N82-17446
On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116708] N82-17725
LEAD ACID BATTERIES
Upgraded demonstration vehicle task report
[NASA-CR-168424] N82-18067
Electric and hybrid vehicle program
[DE82-000904] N82-18072
LEADING EDGES
Experimental study of delta wing leading-edge devices for drag reduction at high lift --- conducted in Langley 7- by 10-foot high speed tunnel N82-17125
LEARNING CURVES
Direction and collinearity factors in growth curve models and other problems in discriminant analysis
N82-17947
LEAST SQUARES METHOD
COMPLEX ALIGN: A technique for the characteristic locus method of design --- of controllers
[OUEL-1366/81] N82-17925
An iterative method for solving electrostatic problems
[AD-A107740] N82-17956
LEGIBILITY
Legibility of characters with different segmentations and colors N82-17486
LEPTONS
QCD and weak asymmetries in lepton pair production N82-17965
LIBRATION
Advantages of space stations at the Earth-Moon libration points N82-17242
LIBRATIONAL MOTION
Advantages of space stations at the Earth-Moon libration points N82-17242
Material on the dynamics of Earth-Moon systems: Planetary libration, fundamentals
[MITT-155] N82-18098
LIFE (DURABILITY)
A rapid estimation of the lifetime of near Earth satellites for mission analysis
[INPE-2158-RPE/377] N82-17246
Multivariate harmonic new better than used in expectation distributions
[AD-A108125] N82-17941
LIFE CYCLE COSTS
Component research for future propulsion systems
N82-17224
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 1: Summary
[NASA-CR-168432] N82-17612
A normative price for energy from an electricity generation system: An Owner-dependent Methodology for Energy Generation (system) Assessment (OMEGA). Volume 2: Derivation of system energy price equations
[NASA-CR-168433] N82-17613
LIFT
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
LIFT DRAG RATIO
Experimental study of delta wing leading-edge devices for drag reduction at high lift --- conducted in Langley 7- by 10-foot high speed tunnel N82-17125
LIGANDS
Electrochemical investigation of solvent effects on the electrode kinetics and thermodynamics of some transition-metal redox couples N82-17284
Planar, square-pyramidal and macrocyclic transition metal complexes prepared from linear tetradentate diaminediphosphine ligands N82-17330
The structural consequences of transition metal basicity: Investigation of various gold complexes
N82-17332
Nuclear magnetic resonance studies of transition metal complexes N82-17972
LIGHT EMISSION
Investigation of D2O laser emission at 50, 66, 83, 111, and 116 microns
[IPF-81-6] N82-17502
Observations of large scale F-region irregularities using airflow emissions at 7774 deg A and 6300 deg A
[INPE-2236-PRE/023] N82-17709
LIGHT SCATTERING
Beam broadening in dense scattering media --- laser irradiation of biological tissue
[MBB-UA-583-81-O] N82-18002
Measurement of heavy ion components in a hydrogen plasma by CO2 laser scattering with coherent detection
[IPF-81-5] N82-18024
LIGNITE
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402
LIKELIHOOD RATIO
A robust nonparametric likelihood ratio test
[AD-A108124] N82-17940
LIMITS (MATHEMATICS)
A discrete-time multivariable criterion for limit cycle predictions
[OUEL-1369/81] N82-17902
LINE OF SIGHT
Components in the interstellar medium
N82-18094
LINE SHAPE
Computational theory of line drawing interpretation
[NASA-CR-165804] N82-17897
LINE SPECTRA
Temperature dependence of the homogeneous linewidth of the (D sub 0)-5 - (F sub 0)-7 transition of Eu-3(+) in amorphous hosts at high temperatures
[AD-A107900] N82-17375
Investigation of D2O laser emission at 50, 66, 83, 111, and 116 microns
[IPF-81-6] N82-17502
Photodissociation of metal-halides: Lasers, absorption lineshape, and polarization of fluorescence studies N82-17990
Spectral diffusion in orientationally disordered organic solids
[AD-A107950] N82-18050
A study of extragalactic supernova remnants
N82-18087
H2 emission in molecular clouds N82-18101
LINEAR FILTERS
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] N82-17565
LINEAR PREDICTION
Compound function and linear model methods for the multivariate analysis of ordinal categorical data
N82-17937
LINEAR SYSTEMS
Effect of record length on the correlation of complex exponentials
[AD-A107738] N82-17911
Parameter estimation in a reproducing kernel Hilbert space for linear hereditary systems N82-17932
LINEARITY
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553
LINEARIZATION
Computational theory of line drawing interpretation
[NASA-CR-165804] N82-17897
LINES (GEOMETRY)
User's guide for SKETCH
[NASA-TM-81369] N82-17878
LINES OF FORCE
Acoustic intensity vectors from an infinite plate with line attachments
[AMTE(N)-TM-81086] N82-17958
LIPID METABOLISM
Formation constant and photolabeling of gramicidin channels in lipid bilayer membranes N82-17277
Human lipid metabolism during confinement in pressure chamber N82-17822
A model for essential hypertension: Metabolic studies N82-17867
LIQUID CHROMATOGRAPHY
Singlet-delta molecular oxygen as a tool for selective chemiluminescent detection in chromatography
N82-17285
The application of electrochemical detection in high performance liquid chromatograph (HPLC): Selective determination of readily oxidisable compounds at trace level
[DRIC-T-6461] N82-17298
LIQUID CRYSTALS
Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036
LIQUID FLOW
Cone penetrometer and liquid limit
[PB82-113507] N82-17724
LIQUID HYDROGEN
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] N82-17448
LIQUID LEVELS
Cone penetrometer and liquid limit
[PB82-113507] N82-17724
LIQUID PHASES
An equation of state for fluid ethylene
[PB82-107673] N82-17325
LIQUID ROCKET PROPELLANTS
Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658
LIQUID-GAS MIXTURES
Fluid flow and gas dispersion in stirred tank reactors N82-17457
LIQUID-SOLID INTERFACES
Fluid flow and gas dispersion in stirred tank reactors N82-17457
LITHIUM COMPOUNDS
Research in LPE of doped LnlbOsub3 and LiTaOsub3 thin films
[AD-A107686] N82-18045
LITHIUM FLUORIDES
Zero-gravity growth of a sodium chloride-lithium fluoride eutectic mixture
[NASA-CR-161966] N82-17299
LITHIUM SULFUR BATTERIES
Safety design considerations for lithium batteries in CF applications
[AD-A107619] N82-17626
LITHOSPHERE
The thermo-mechanical properties of the oceanic lithosphere N82-17808
LOAD DISTRIBUTION (FORCES)
Analysis methods for predicting structural response to projectile impact N82-17162
Stiffness degradation of impact damaged structure
N82-17166
Analysis of multiple load path panels containing impact damage N82-17170
LOADS (FORCES)
Flight-by-flight corrosion fatigue tests N82-17348
LOG PERIODIC ANTENNAS
A stepped-frequency HF radar for ionospheric diagnostics
[AD-A107810] N82-17718
LOGIC DESIGN
Stage-state reliability analysis technique
N82-17104

Active beacon collision avoidance logic evaluation. Volume 2: Collision avoidance (BCAS) threat phase
[AD-A107805] N82-17148

LONG DURATION SPACE FLIGHT
Diet of crews of three main expeditions aboard Salyut-6 orbital station N82-17815
Effect of space flights of different duration on energy metabolism of human erythrocytes N82-17817
Prevention of staphylococcal infections during space flights N82-17818
Human adrenosympathetic system during immersion in water N82-17819

LONG RANGE WEATHER FORECASTING
Present status of long-range weather forecasting N82-17755
Large-scale oceanographic variations in the western North Pacific N82-17778
Ocean's role in processes of short-range climatic variation formation N82-17779

LONG TERM EFFECTS
The World Climate Program N82-17748
Increase of atmospheric CO2 and possible climatic changes N82-17763
Large-scale oceanographic variations in the western North Pacific N82-17778
Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors N82-17816

LORAN C
Commutated automatic gain control system
[NASA-CR-168440] N82-17140
A prototype interface unit for microprocessor-based loran-C receiver
[NASA-CR-168441] N82-17141
DOT should terminate further LORAN-C development and modernization and exploit the potential of the NAVSTAR/Global Positioning System
[AD-A107768] N82-17143

LORENTZ TRANSFORMATIONS
Theoretical calculations of power-broadened microwave lineshapes N82-17296

LOUDNESS
Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels N82-17856

LOW ALTITUDE
Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

LOW FREQUENCIES
A digital field strength measuring receiver for l. f. and m. f.
[BBC-RD-1981/7] N82-17474

LOW GRAVITY MANUFACTURING
Glass shell manufacturing in space
[NASA-CR-161972] N82-17233

LOW SPEED WIND TUNNELS
Scale-model studies for the improvement of flow patterns of a low-speed tunnel
[NASA-CR-169413] N82-17228

LOW TEMPERATURE TESTS
Low temperature behavior of epoxy-rubber particulate composites
[PB82-113499] N82-17388

LUBRICATING OILS
Initial assessment of selected advanced lubricating oil filters
[DE82-002420] N82-17506

LUBRICATION
Lubrication breakdown between gear teeth N82-17213
Initial assessment of selected advanced lubricating oil filters
[DE82-002420] N82-17506

LUMINANCE
Evolutionary variations of solar luminosity N82-18112

LUMINESCENCE
Induced luminescence by charged particles on gaseous, liquid and solid argon
[CRN-CPR-80-10] N82-17316
Temperature dependence of the homogeneous linewidth of the (D sub 0)-5 - (F sub 0)-7 transition of Eu-3(+) in amorphous hosts at high temperatures
[AD-A107900] N82-17375
A search for halos around spiral galaxies N82-18082

LUMINOSITY
Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter
[NASA-CR-168411] N82-18095

LUNAR LIMB
Advantages of space stations at the Earth-Moon libration points N82-17242

LUNGS
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842

M

M STARS
A study of extragalactic supernova remnants N82-18087

MACH-ZEHNDER INTERFEROMETERS
An investigation of variable coherence sources and of some practical applications
[AD-A107715] N82-17999

MAGNETIC ANOMALIES
Bangui anomaly
[WORK-M-45] N82-17556
Seismic study of the Bangui anomaly N82-17559
Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments
[INPE-2119-RPE/343] N82-17711
Large horizontal electric fields measured at heights of the Brazilian magnetic anomaly and association to local energetic particle precipitation
[INPE-2120-RPE/344] N82-17712
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] N82-17715

MAGNETIC CHARGE DENSITY
Heavy Higgs bosons and their low energy impact N82-17967

MAGNETIC CIRCUITS
Electric and hybrid vehicle program
[DE82-000904] N82-18072

MAGNETIC COMPASSES
QD: A quartz declinometer of classic type --- quartz fiber suspension
[DMI-GEOPHYS-PAPERS-R-65] N82-17479

MAGNETIC FIELD CONFIGURATIONS
Note on planar undulator wiggler single electron motion
[AD-A108051] N82-17493

MAGNETIC FIELDS
A digital field strength measuring receiver for l. f. and m. f.
[BBC-RD-1981/7] N82-17474
Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch
[NASA-TM-83868] N82-17714
Effect of stationary magnetic field on the endocrine system N82-17814
Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

MAGNETIC FLUX
The origin of nulls mode changes and timing noise in pulsars
[PB82-115221] N82-18100

MAGNETIC MIRRORS
Electron cyclotron resonance heating of tandem mirrors at relativistic energies
[AD-A107944] N82-18018

MAGNETIC PERMEABILITY
The cluster approach to the magnetic susceptibilities of low-dimensional copper clusters N82-17333

MAGNETIC POLES
On the shape and orientation control of an orbiting shallow spherical shell structure
[NASA-CR-168420] N82-17243
Enhancement of poles in spectral analysis
[AD-A107739] N82-17432

MAGNETIC RELAXATION
Relaxation phenomena in optically pumped mercury isotopes
[AD-A107604] N82-17978
Stabilization of the lower hybrid drift instability by resonant electrons
[AD-A107652] N82-18014

MAGNETIC RESONANCE
Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

MAGNETIC SIGNATURES
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83881] N82-18106

MAGNETIC SURVEYS
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83881] N82-18106

MAGNETIZATION
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] N82-17715

MAGNETOHYDRODYNAMIC FLOW
Steady-state planar ablative flow
[AD-A107601] N82-18017
Differences between solar wind plasmoids and ideal magnetohydrodynamic filaments
[AERONOMICA-ACTA-A-232-1981] N82-18110

MAGNETOHYDRODYNAMIC GENERATORS
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] N82-17603

MAGNETOHYDRODYNAMIC STABILITY
Stabilization of the lower hybrid drift instability by resonant electrons
[AD-A107652] N82-18014
Rotational instabilities in the field-reversed theta pinch: Results of hybrid simulations
[AD-A107651] N82-18015
Review of the lower hybrid drift instability and its saturation mechanisms
[AD-A107550] N82-18016
Microinstabilities in a radially contracting inhomogeneous cylindrical plasma slab. Part 2: Lower hybrid and electron cyclotron drift instabilities in the plasma focus
[IPF-80-13-PT-2] N82-18022
Magnetohydrodynamic stability of structurally stable toroidal plasmas N82-18029
Radial evolution of power spectra of interplanetary Alfvenic turbulence
[IPS-81-13] N82-18097
Statistical properties of MHD fluctuations associated with high speed streams from HELIOS 2 observations
[IPS-81-5] N82-18117

MAGNETOHYDRODYNAMICS
Resistive interchange modes in reversed field pinches
[AD-A108129] N82-18019

MAGNETOMETERS
QD: A quartz declinometer of classic type --- quartz fiber suspension
[DMI-GEOPHYS-PAPERS-R-65] N82-17479
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83881] N82-18106

MAGNETOPAUSE
Differences between solar wind plasmoids and ideal magnetohydrodynamic filaments
[AERONOMICA-ACTA-A-232-1981] N82-18110

MAGNETOSPHERE
USSR report: Space, no. 14
[JPRS-79711] N82-17235
Commentary on Soviet-French Aureole-3 satellite N82-17236
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238
The plasma ion composition in the high-latitude magnetospheric boundary layer according to Prognoz-7 data
[REPT-658] N82-17697
Voyager 1 assessment of Jupiter's planetary magnetic field
[NASA-TM-83882] N82-18105

MAINTAINABILITY
Statistical aspects of reliability, maintainability and availability
[AD-A107618] N82-17517

MAINTENANCE
Maintenance posture for quick start
[AD-A107553] N82-17177

Forecasting corrosion damage and maintenance costs for large aircraft N82-17357
Adhesives for field repair of graphite/epoxy composite structures
[AD-A107870] N82-17376
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models
[PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study
[PB82-112913] N82-17415

MAMMALS
Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA)
[AD-A107574] N82-17840

MAN ENVIRONMENT INTERACTIONS
Physical factors of environment as hygiene problem N82-17848

MAN MACHINE SYSTEMS
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17875

MANAGEMENT METHODS
Design and maintenance against corrosion of aircraft structures N82-17356
Cumberland River Basin, regional water and land resources plan
[PB82-111501] N82-17585
Food crises and famines: The UNRISD food systems approach N82-17762
Increase of atmospheric CO2 and possible climatic changes N82-17763
The provision of climatic information for agriculture in the USSR N82-17767
The nature of drought and strategies to reduce its effects N82-17770

MANAGEMENT PLANNING
The nature and scope of climate applications N82-17757
Effect of climate on the development of natural resources in Asia N82-17782
Order: A program package for information on management of staff activities and expenditures
[EUR-7442-EN] N82-18056
Expected use of micro-based network analysis
[AD-A107660] N82-18057
Procedures for preparing regional transportation management plans --- oil and gas ppelines from outer continental shelves
[PB82-106162] N82-18075

MANAGEMENT SYSTEMS
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] N82-18070

MANEUVERABILITY
The armed helicopter in air to air missions
[MBB-UD-317-81-O] N82-17158

MANUAL CONTROL
An investigation of multi-axis isometric side-arm controllers in a variable stability helicopter
[AD-A106759] N82-17226

MANUALS
Manual of ground-water quality sampling procedures
[PB82-103045] N82-17660

MANUFACTURING
Census of US Civil aircraft, calender year 1980
[AD-A106675] N82-17084

MANY BODY PROBLEM
A density functional approach to many-body effects in the optical response of atoms N82-17964
Nuclear matter with realistic Hamiltonians N82-17971
Computational methods for the nuclear- and neutron-matter problems
[DE82-001584] N82-17981

MAPPING
The PAIGH Gazetteer program
[AD-A107549] N82-17568
Photogrammetry software. A package for everyone
[AD-A108098] N82-17570
CIMS: The Cartographic Information Management System
[AD-A108106] N82-17571
A seismic study on cracks in crystalline rock
[FOA-C-20417-E1] N82-17716
Combinatorial maps N82-17954

MAPS
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] N82-17645
A continuous shading scheme for two-variable mapping N82-17939
Implementation of a display routine for coded map data bases
[FOA-C-30241-E] N82-18059

MARINE BIOLOGY
ONR Tokyo scientific bulletin. Volume 6: Number 3, July to September 1981
[AD-A107649] N82-18118

MARINE ENVIRONMENTS
Corrosion fatigue of offshore and ship-building steels N82-17346
Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806

MARINE TECHNOLOGY
Technology and oceanography: An assessment of federal technologies for oceanographic research and monitoring
[PB82-101718] N82-17807

MARKET RESEARCH
Assessment of historical and projected segments of US and World civil and military rotorcraft markets 1960 - 1990
[NASA-CR-166151] N82-17137
Cross-impact study of foreign satellite communications on NASA's 30/20 GHz program
[NASA-CR-165154] N82-17420
NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069

MARKETING
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] N82-17631

MARKOV CHAINS
Accelerated convergence in the simulation of countably infinite state Markov chains
[AD-A107869] N82-17943

MAROTS (ESA)
Definition of the MAROTS reflector meridan line by interpolation: Application to optical measurements
[ESA-TT-696] N82-18003

MASKING
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans N82-17860

MASS FLOW
Investigation of in-situ gelation to control emissions from abandoned hazardous waste sites
[PB82-103506] N82-17409
Kinematic thermal models of the Earth's mantle N82-17740

MASS SPECTROMETERS
The construction of a neutral molecular beam facility and its application to mass spectrometers carried on space vehicles N82-17244

MASS SPECTROSCOPY
Some analytical aspects of field desorption mass spectrometry N82-17274
Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17282

MASS TO LIGHT RATIOS
A search for halos around spiral galaxies N82-18082

MATERIALS HANDLING
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553
Development of a man and supply hoisting system for underground metal and nonmetal mines, volume 1
[PB82-113366] N82-17583

MATERIALS RECOVERY
Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408
High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001078] N82-17577
Demonstration physical chemical sewage treatment plant utilizing biological nitrification
[PB82-101643] N82-17675

MATHEMATICAL MODELS
Finite difference computation of the conical flow field over a delta wing
[VKI-TN-140] N82-17135
A static screened potential method for the calculation of electronic transition properties of azabenzenes N82-17272
Modeling chemical systems to improve analytical response N82-17283
Modeling of SO2 oxidation in smog
[PB82-101932] N82-17323
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models
[PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study
[PB82-112913] N82-17415
State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83876] N82-17440
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor --- Entrainment Stretching Coherence Interdiffusion Moving Observer (ESCIMO)
[HTS/79/14] N82-17470
An optical model for the microwave properties of sea ice
[NASA-TM-83865] N82-17561
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] N82-17565
Great Lakes environmental planning study
[PB82-112970] N82-17682
A statistical analysis of monthly precipitation in Denmark
[DMI-CLIMATOL-PAPERS-7] N82-17789
Rational modeling by pencil-of-function method
[AD-A107741] N82-17912
Compound function and linear model methods for the multivariate analysis of ordinal categorical data N82-17937
A quark model of the nonstrange baryons N82-17968

MATHEMATICAL TABLES
Hypothesis testing in contingency tables with small samples N82-17946

MATRICES (MATHEMATICS)
Signal processing with systolic arrays N82-17096
NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916
A study of orders in quaternion algebras
[CTH-MATH-1981-16] N82-17928
Multigrid methods for differential eigenvalue and variational problems and multigrid simulation N82-17934
Semigroups of column stochastic matrices N82-17955

MATRIX THEORY
Robust principal components and dispersion matrices via projection pursuit
[AD-A107827] N82-17909

MAXIMUM ENTROPY METHOD
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17888

MAXIMUM LIKELIHOOD ESTIMATES
An isotonic regression algorithm
[AD-A107620] N82-17886
A robust nonparametric likelihood ratio test
[AD-A108124] N82-17940
Proportional hazards model with time-dependent covariates: Large sample theory and related topics N82-17945

MEASURING INSTRUMENTS
In situ analysis of thin layer chromatography plates using an imaging detector N82-17276
MECHANICAL DEVICES
Sixth International Conference on Noise in Physical Systems
[PB82-105305] N82-17449
MECHANICAL PROPERTIES
The structural formation and physical behaviour of cross-linked epoxy resins
[RAE-LIB-TRANS-2067] N82-17268
Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature
[NAL-TR-678] N82-17368
Low temperature behavior of epoxy-rubber particulate composites
[PB82-113499] N82-17388
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models
[PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study
[PB82-112913] N82-17415
Ultrasonic and mechanical characterizations of fatigue states of graphite epoxy composite laminates
[NASA-CR-3504] N82-17514
MECHANICAL SHOCK
Mechanical shock test analysis
[DE82-000932] N82-17534
MEDICAL EQUIPMENT
Portable medical status and treatment system
[NASA-CR-167496] N82-17862
MELTING
Simulation of ice-cover growth and thermal decay on the upper St. Lawrence River N82-17550
MELTS (CRYSTAL GROWTH)
The geochemistry of sulfur and carbon in basaltic melts N82-17734
Preparation of InP by solution and mel: growth techniques
[AD-A107646] N82-18047
MEMBRANES
Formation constant and photolabeling of gramicidin channels in lipid bilayer membranes N82-17277
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] N82-17611
Facilitated diffusion of small non-electrolytes in the human red blood cell N82-17855
MERCURY CADMIUM TELLURIDES
Moderate temperature detector development
[NASA-CR-167504] N82-17998
MERCURY ISOTOPES
Relaxation phenomena in optically pumped mercury isotopes
[AD-A107604] N82-17978
MEROMORPHIC FUNCTIONS
Rigorous high speed separation of zeros of Riemann's zeta function
[MC-NW-113/81] N82-17921
MESOSCALE PHENOMENA
Arabian sea project of 1980: Composites of infrared images
[AD-A107910] N82-17567
MESSAGE PROCESSING
Dispersed sensor processing mesh project --- avionics N82-17113
Multiple-access channels with different generalized feedback signals
[INPE-2221-PRE/017] N82-17421
METABOLIC WASTES
Assay of dissolved carbon in reclaimed water produced in spacecraft water supply systems
N82-17838
METABOLISM
Metabolic processes in rat skeletal muscles after flight aboard Cosmos-936 N82-17833
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842
Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865
METAL BONDING
Development status of the 'Adhesion of Metals' experiment and of the UHV Chamber facility
[CISE-1700] N82-17336
The experience of corrosion on French military aerodynes N82-17355
METAL FATIGUE
Comparison between reliability, sensitivity and accuracy of nondestructive inspection methods
[NLR-MP-81009-U] N82-17515
METAL FILMS
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
Optical characterization of thin metallic and semiconducting films in the far infrared --- pumpd infrared lasers N82-18037
METAL FINISHING
NATO-CCMS pilot study on disposal of hazardous wastes: Metal finishing wastes. Project leader: France
[PB82-114554] N82-17694
METAL HALIDES
Photodissociation of metal-halides: Lasers, absorption lineshape, and polarization of fluorescence studies N82-17990
METAL MATRIX COMPOSITES
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
METAL OXIDES
Investigation of oxide bound transition metal complexes N82-17334
METAL PARTICLES
Nearshore marine trace metal geochemistry
[PB82-109372] N82-17804
METAL-METAL BONDING
Evaluation of several bonding parameters on the random bending fatigue life of adhesively bonded aluminum joints
[AD-A107995] N82-17533
METALS
Necking, fracture and localization of plastic flow in metals N82-17525
Development of a man and supply hoisting system for underground metal and nonmetal mines, volume 1
[PB82-113366] N82-17583
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696
METASTABLE STATE
Energy partitioning in the dissociation of cyanogen at 193nm
[AD-A107773] N82-17303
METEOROLOGICAL INSTRUMENTS
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064
METEOROLOGICAL PARAMETERS
Meteorological aspects of the utilization of solar radiation as an energy source, part 1
[WMO-557-VOL-1] N82-17644
Meteorological aspects of the utilization of wind as an energy source
[WMO-575] N82-17646
Meteorological services in agronomic and economic evaluations of risk N82-17760
Mean atmospheric conditions: Australian tropical operating conditions
[AD-A107904] N82-17787
World Weather Watch Tropical Cyclone Program. Typhoon operational experiment (Topex): Automatic weather stations for tropical cyclone areas --- systems design and operation
[WMO-570] N82-17790
Effects of ambient parameters on man
N82-17826
METEOROLOGICAL RADAR
Multiple Doppler radar analysis of severe thunderstorms: Designing a general analysis system
[PB82-114117] N82-17794
METEOROLOGICAL SATELLITES
Publications and reports on contracts and grants, 1980
[PB82-103219] N82-17792
METEOROLOGICAL SERVICES
Sea-ice formation services in the world
[WMO-574] N82-17578
Meteorological services in agronomic and economic evaluations of risk N82-17760
Further studies on the climatic change during historical times in China N82-17776
Public requirements for weather information and attitudes concerning weather service
[PB82-109117] N82-17791
METEOROLOGY
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238
Proceedings of the Technical Conference on Climate: Asia and Western Pacific
[WMO-578] N82-17747
Meteorological products and some applications of Global Meteorological Satellite (GMS) data
N82-17751
Climate applications to agricultural problems
N82-17759
The stability of yields in Shanghai and the climatic conditions N82-17761
Food crises and famines: The UNRISD food systems approach N82-17762
The provision of climatic information for agriculture in the USSR N82-17767
METEOSAT SATELLITE
METEOSAT-2: TO/NSO phase operations
N82-17234
METHANE
Land biomass program
[PB82-117391] N82-17405
METHODOLOGY
Meteorological services in agronomic and economic evaluations of risk N82-17760
Food crises and famines: The UNRISD food systems approach N82-17762
METHYL ALCOHOLS
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] N82-17399
METROLOGY
New technology challenges metrology
[PB82-105974] N82-17416
MICROCOMPUTERS
A study of the selection of microcomputer architectures to automate planetary spacecraft power systems
[NASA-CR-168412] N82-17259
MICROELECTRONICS
Thick-film analysis: Literature search and bibliography
[DE82-000960] N82-17447
MICROMETEOROLOGY
An analysis of Wangara micrometeorology: Surface stress, sensible heat, evaporation, and dewfall
[PB82-114190] N82-17793
MICROORGANISMS
Development and evaluation of an ambient viable microbial air sampler
[PB82-113689] N82-17488
Aerosols distribution of microorganisms in a manned pressurized chamber and effect of artificial air ionization N82-17823
MICROPROCESSORS
Continuous reconfiguration in a multi-microprocessor flight control system
N82-17093
Experiences with the experimental FFM-MCS
N82-17094
Protocol level modules for cost effective standard computer communication N82-17109
A prototype interface unit for microprocessor-based loran-C receiver
[NASA-CR-168441] N82-17141
Expected use of micro-based network analysis
[AD-A107660] N82-18057
MICROSTRUCTURE
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites
[NASA-CR-168421] N82-17267
Microstructural effects in abrasive wear
[DE82-003653] N82-17339
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
MICROWAVE ANTENNAS
Activities report of the Antennas, Propagation and Digital Image-Processing Group: Research in progress N82-17425
MICROWAVE COUPLING
The present picture of Io's electrodynamic coupling with the magnetosphere of Jupiter
[IPS-81-6] N82-18107

MICROWAVE EMISSION

An optical model for the microwave properties of sea ice
[NASA-TM-83865] N82-17[illegible]61

Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] N82-17563

Microwave discharges --- theory and applications
[LP-192] N82-18027

MICROWAVE FREQUENCIES

Experimental correlation and self consistent analysis of an IR, FIR, MW triple resonant system in ammonia N82-17996

MICROWAVE IMAGERY

High resolution 3-D wavelength diversity imaging
[AD-A107632] N82-17480

MICROWAVE LANDING SYSTEMS

Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 2: RNAV/MLS transition problems for aircraft
[NASA-CR-3511] N82-17142

MICROWAVE RADIOMETERS

Hypervelocity impact instrumentation development
[AD-A107652] N82-17484

MICROWAVE SOUNDING

Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699

MICROWAVE SPECTRA

Theoretical calculations of power-broadened microwave lineshapes N82-17296

MICROWAVE TUBES

Microwave discharges --- theory and applications
[LP-192] N82-18027

MICROWAVES

Microwave plasma source for neutral-beam injection systems
[DE81-029122] N82-18020

MIE SCATTERING

Stratospheric aerosol properties from Earth limb photography and Mie scattering theory
[AERONOMICA-ACTA-A-235-1981] N82-17705

MILITARY AIRCRAFT

Detection and prevention of corrosion in Royal Air Force aircraft N82-17351

MILITARY AVIATION

Assessment of historical and projected segments of US and World civil and military rotorcraft markets 1960 - 1990
[NASA-CR-166151] N82-17137

MILITARY HELICOPTERS

The armed helicopter in air to air missions
[MBB-UD-317-81-O] N82-17158

Development test programs adapted to helicopter engines N82-17205

MILITARY OPERATIONS

Design Criteria of the A 129 helicopter drive system N82-17215

Future requirements for helicopter propulsion systems N82-17225

Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107866] N82-17863

MILKY WAY GALAXY

The distribution of free electrons in the inner galaxy from pulsar dispersion measures
[NASA-TM-83875] N82-18096

MINERAL DEPOSITS

Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] N82-17696

Geology and geochemistry of sphalerite in coal N82-17702

Deposition and diagenesis of Glauconite Sandstone, Berrymore-Lobstick-Bigoray area, South Central Alberta: A study of physical chemistry of cementation N82-17703

On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116708] N82-17725

Petrology of the ultramafic xenoliths on the Koolau shield, Oahu, Hawaii. Part 1: Liquidus phase relations on the join anorthite-forsterite-silica at 10 kbar, part 2 N82-17727

The characterization and evolution of carbonate tidal deltas, upper Florida Keys N82-17796

MINERAL EXPLORATION

Psycho-social aspects of productivity in underground coal mining
[NASA-CR-168429] N82-17551

Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553

High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001078] N82-17577

On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116708] N82-17725

MINERALOGY

Geology, mineralogy, and geochemistry of the McClure Mountain alkalic complex, Fremont County, Colorado N82-17731

MINERALS

Minerals yearbook, 1978-79. Volume 2: Area reports, Domestic
[PB82-105248] N82-17598

Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695

MINES (EXCAVATIONS)

The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] N82-17564

The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] N82-17565

Development of a man and supply hoisting system for underground metal and nonmetal mines, volume 1
[PB82-113366] N82-17583

Study of air compressor hazards in underground and surface mines
[PB82-105164] N82-17597

MINICOMPUTERS

Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105

State-of-the-art computer monitoring equipment N82-17116

MINING

Microstructural effects in abrasive wear
[DE82-003653] N82-17339

Psycho-social aspects of productivity in underground coal mining
[NASA-CR-168429] N82-17551

Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553

The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] N82-17554

The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555

Development of sensitized pick coal interface detector system
[NASA-CR-161961] N82-17560

High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001078] N82-17577

Minerals yearbook, 1978-79. Volume 2: Area reports, Domestic
[PB82-105248] N82-17598

MIRAGE AIRCRAFT

Mirage 2000 weapons systems architecture N82-17118

MIRROR FUSION

Mechanical Engineering Department technical review
[DE82-000303] N82-17509

MIRRORS

Cavity lifetime phase-shift method for sensitive reflectance measurements at mid-infrared wavelengths
[ATR-82(8448)-1] N82-17423

MISSILE CONTROL

Optical data processing for missile guidance
[AD-A107592] N82-17145

Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245

MISSILES

Application to missile dynamics
[MBB-UA-553-80-O] N82-17248

MISSION PLANNING

A rapid estimation of the lifetime of near Earth satellites for mission analysis
[INPE-2156-RPE/377] N82-17246

MIXING LENGTH FLOW THEORY

Thermal perturbation of the Sun
[NASA-CR-168459] N82-18111

MIXTURES

Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408

MOBILITY

Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575

MODULES

Function specifications for the A-7E Function Driver module
[AD-A107922] N82-17173

MOISTURE CONTENT

Design, analysis, and test verification of advanced encapsulation systems
[NASA-CR-168407] N82-17604

MOLDING MATERIALS

Transparent polyolefin film armor
[AD-A107562] N82-17377

MOLDS

Transparent polyolefin film armor
[AD-A107562] N82-17377

Prospects for materials (plastics, elastomers, paints). Volume 3: Plastic materials (appendix 3, computer assisted design approach to injection molds)
[CETIM-12-B-194-VOL-3] N82-17384

An investment mold for titanium casting
[PB82-104662] N82-17419

MOLECULAR BEAMS

The construction of a neutral molecular beam facility and its application to mass spectrometers carried on space vehicles N82-17244

Laser spectroscopy of molecular beams N82-17293

Molecular beam studies of low energy reactions
[AD-A108099] N82-17977

MOLECULAR CHAINS

Basic research on macromolecular dynamics
[PB82-115502] N82-17369

MOLECULAR CLOUDS

Comets, interstellar molecules and the origin of life
[PB82-104274] N82-18108

MOLECULAR COLLISIONS

Energy transfer in molecular collisions N82-17970

MOLECULAR EXCITATION

Excited-state phenomena associated with solvation site heterogeneity N82-17288

Experimental correlation and self consistent analysis of an IR, FIR, MW triple resonant system in ammonia N82-17996

Spectroscopy of molecular plasmas and kinetics of excited states
[LP-187] N82-18025

MOLECULAR INTERACTIONS

High pressure nuclear magnetic resonance studies of viscous fluids N82-17289

Basic research on macromolecular dynamics
[PB82-115502] N82-17369

Molecular interactions with Many-Body Perturbation Theory
[AD-A107616] N82-17494

MOLECULAR ORBITALS

A static screened potential method for the calculation of electronic transition properties of azabenzenes N82-17272

Measurement of fluorine atom concentrations and reaction rates in chemical laser systems
[AD-A108072] N82-17495

MOLECULAR RELAXATION

Theoretical calculations of power-broadened microwave lineshapes N82-17296

MOLECULAR STRUCTURE

Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302

Characterization of the electronic and molecular structures of transition metal semiquinone and catecholate complexes N82-17329

The structural consequences of transition metal basicity: Investigation of various gold complexes
N82-17332
Development of high sensitivity X-ray and electron-beam resist processes
[AD-A107833] N82-17374
Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %)
[AD-A107809] N82-17378
Structural and dielectric investigation on the nature of the transition in a copolymer of vinylidene flouride and trifluoroethylene (54/46 Mol %)
[AD-A107846] N82-17379
New energetic materials. Structural characterization
[AD-A107714] N82-17381
H2 emission in molecular clouds N82-18101

MOLECULAR WEIGHT
Development of high sensitivity X-ray and electron-beam resist processes
[AD-A107833] N82-17374

MOLECULES
Substitution and excited state electron transfer reactions of transition metal complexes in organized media N82-17331
Symmetry and multiple electromagnetic scattering by a cluster of spheres
[AD-A108118] N82-17428
Surface analysis applied to thin films of molecular solids N82-18040

MOLTEN SALT ELECTROLYTES
A new class of room temperature molten salts for battery applications
[AD-A107989] N82-17627

MOMENTUM
Distribution theoretic methods for dynamic analysis and optimization of mechanisms with intermittent motion
[AD-A108021] N82-17532

MOMENTUM THEORY
The Fermi surface reconstructed momentum density of V3Si from positron annihilation experiments
N82-18039

MONATOMIC GASES
Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora N82-17700

MONAURAL SIGNALS
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861

MONITORS
State-of-the-art computer monitoring equipment
N82-17116
Detection and mapping of insoluble sinking pollutants
[PB82-105586] N82-17674

MONKEYS
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

MONOMERS
New energetic materials. Structural characterization
[AD-A107714] N82-17381

MONOMOLECULAR FILMS
Substitution and excited state electron transfer reactions of transition metal complexes in organized media N82-17331

MONSOONS
Report of the third session of the West African Monsoon Experiment (WAMEX) scientific regional committee --- conference proceedings, 10-14 Nov. 1980
[GARP-SPEC-REPT-37] N82-17721
Tropical easterly jet and contribution of interacting atmospheric waves in monsoon region N82-17756
Climate circulation processes in South-East Asia during winter monsoon N82-17769
The summer monsoon rains over South and East Asia and West Pacific N82-17771
Regionality of climatic change in monsoon Asia
N82-17777
Variations in the thermal structure and wind field occurring in the western Indian Ocean during the monsoons
[AD-A107761] N82-17800

MONTANA
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591

MORPHOLOGY
Effects of surface morphology and chemical composition on the durability of adhesively bonded aluminum structures
[AD-A107864] N82-17373

MOSAICS
Arabian sea project of 1980: Composites of infrared images
[AD-A107910] N82-17567

MOSSBAUER EFFECT
Mossbauer studies on partially oriented samples of carbon monoxymyoglobin and photodissociated carbon monoxymyoglobin N82-18038

MOTION
Distribution theoretic methods for dynamic analysis and optimization of mechanisms with intermittent motion
[AD-A108021] N82-17532

MOTION PICTURES
Computer interpretation of a dynamic image from a moving vehicle
[AD-A107565] N82-17885
Terrain model animation
[AD-A107911] N82-17887

MOTION STABILITY
Vertical coherent instabilities in bunched particle beams N82-17968

MOTOR VEHICLES
Operating costs and characteristics of minibuses
[PB82-107038] N82-18076
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks
[PB82-108523] N82-18078

MOUNTAINS
Geology, mineralogy, and geochemistry of the McClure Mountain alkalic complex, Fremont County, Colorado N82-17731

MOVING TARGET INDICATORS
Positioning of multi stopband notches in staggered-PRF MTI filters
[LEOK-TR-1979-11] N82-17427

MULTIPHASE FLOW
Mathematical models in nuclear-reactor thermal hydraulics
[HTS/81/3] N82-17994

MULTIPHOTON ABSORPTION
Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302

MULTIPLE ACCESS
Multiple-access channels with different generalized feedback signals
[INPE-2221-PRE/017] N82-17421

MULTIPLEXING
F/A-18A tactical airborne computational subsystem N82-17119

MULTIPROCESSING (COMPUTERS)
Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086
The development of asynchronous multiprocessor concepts for flight control system applications
N82-17091
Continuous reconfiguration in a multi-microprocessor flight control system
N82-17093
Experiences with the experimental FFM-MCS
N82-17094
A PEARL software system for multi-processor systems N82-17100
CQNA: Closed queueing network analyzer
[FUB-48-1980] N82-17900

MULTIVARIATE STATISTICAL ANALYSIS
Controller design for unknown multivariable systems using monotone modeling errors
[RR-144] N82-17899
Robust principal components and dispersion matrices via projection pursuit
[AD-A107827] N82-17909
Projection pursuit
[AD-A107817] N82-17910
Exact distribution of certain general test statistics in multivariate analysis N82-17931
Compound function and linear model methods for the multivariate analysis of ordinal categorical data
N82-17937
Multivariate harmonic new better than used in expectation distributions
[AD-A108125] N82-17941

MUSCLES
Activity of some enzymes of carbonhydrate metabolism in rat skeletal muscles after space flight
N82-17834
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

MUSCULAR FUNCTION
Metabolic processis in rat skeletal muscles after flight aboard Cosmos-936 N82-17833
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

MUSCULAR STRENGTH
Regulation of calcium current and calicum activity in heart cells N82-17870

MYOCARDIAL INFARCTION
Mortality in acute myocardial infarction as function of geomagnetic field activity in Yerevan N82-17852

MYOCARDIUM
Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite N82-17832
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17848

MYOELECTRIC POTENTIALS
Regulation of calcium current and calicum activity in heart cells N82-17870

MYOGLOBIN
Mossbauer studies on partially oriented samples of carbon monoxymyoglobin and photodissociated carbon monoxymyoglobin N82-18038

N

NAPHTHALENE
Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17642

NASA PROGRAMS
NASA's University Program: Active projects, fiscal year 1981
[NASA-TM-84416] N82-18055

NATURAL GAS
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[ERG-034] N82-17459
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] N82-17552
A project to test for shale gas in Ohio
[DE82-000916] N82-17572
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] N82-17576

NATURAL GAS EXPLORATION
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State
[DE82-000913] N82-17573
Assessment of oil production volatile organic compound sources
[PB82-108176] N82-17664

NAVIER-STOKES EQUATION
Blade-to-blade computations and boundary layer corrections in axial compressors and turbines
N82-17202

NAVIGATION
Study of homing pigeons in Brazil: Some preliminary results
[INPE-2246-PRE/032] N82-17839

NAVIGATION AIDS
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 2: RNAV/MLS transition problems for aircraft
[NASA-CR-3511] N82-17142
Proceedings of the Tenth Biennial Guidance Test Symposium, Volume 1
[AD-A107612] N82-17147

Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems
N82-17150

NEODYMIUM LASERS

Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843

Beam broadening in dense scattering media --- laser irradiation of biological tissue
[MBB-UA-583-81-O] N82-18002

NERVES

The role of intestinal nerves in the nutrient induced intestinal hyperemia
N82-17869

NETWORK ANALYSIS

Toward global monitoring of the ionosphere in real time by a modern ionosonde network: The geophysical requirements and technological opportunity
[PB82-108444] N82-17723

Routing in networks
[AD-A107841] N82-17895

CQNA: Closed queueing network analyzer
[FUB-48-1980] N82-17900

Two theorems on the decomposition of a para-unitary function into a sum of terms with uniform argument
[INPE-2217-PRE/015] N82-17905

Expected use of micro-based network analysis
[AD-A107660] N82-18057

NETWORK CONTROL

Generalized polling algorithms for distributed systems
N82-17103

A reconfigurable change network for distributed process control
N82-17108

Retransmission strategies for error control in packet transmission protocols
N82-17110

Satellite applications to electric-utility communications needs --- land mobile satellite service
[NASA-CR-168430] N82-17253

NETWORK SYNTHESIS

Protocol level modules for cost effective standard computer communication
N82-17109

Practical aspects which apply to MIL-STD-1553B data networks --- avionics and weapons delivery
N82-17111

A very high throughput NETWORK: The ESCALIBUR project
[ENST-D-81004] N82-17426

NEUTRAL BEAMS

Microwave plasma source for neutral-beam injection systems
[DE81-029122] N82-18020

NEUTRAL GASES

On the relation between plasma and neutral gas profiles in a cold gas blanket system
[TRITA-PFU-81-03] N82-18021

NEUTRON ACTIVATION ANALYSIS

Computerized gamma spectrum analysis with application to multicomponent activation detectors
N82-17301

Neutron activation analysis of nuclides from stellar and man-induced nuclear reactions
N82-17973

NEUTRON COUNTERS

Small sample assay station users guide
[LA-8731-M] N82-17485

Cosmic ray NM-64 neutron monitor data-4
[IPS-81-9] N82-18116

NEUTRON SOURCES

Neutron spectra produced by a fast pulse assembly in free field and perturbed environments
N82-17992

Experimental investigation of the influence of high voltages on the performance of a plasma focus --- as regards neutron yield
[IPF-81-2] N82-18023

NEUTRON SPECTRA

Neutron spectra produced by a fast pulse assembly in free field and perturbed environments
N82-17992

NEUTRON STARS

The role of cyclotron resonance processes in the spectra of accreting neutron stars
[ISSN-0340-8922] N82-18099

The origin of nulls mode changes and timing noise in pulsars
[PB82-115221] N82-18100

NEVADA

Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] N82-17629

Noise impact on communities from aircraft
[GPO-80-617] N82-17655

NEW YORK

Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State
[DE82-000913] N82-17573

Nitrogen in ground water and surface water from sewered and unsewered areas, Nassau County, Long Island, New York
[PB82-109885] N82-17586

Sea grant maritime heritage series: The bight of the big apple
[PB82-119439] N82-17685

NEWS MEDIA

The PAIGH Gazetteer program
[AD-A107549] N82-17568

NEWTON-RAPHSON METHOD

Derivation of quasi-Newton updates for nonlinear equations and unconstrained optimization
N82-17933

NEWTONIAN FLUIDS

CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 1: Theoretical aspects
[EUR-7427/I-EN-VOL-1] N82-17460

CONVEC: A computer program for transient incompressible fluid flow based on quadratic finite elements. Part 2: User's manual
[EUR-7427/II-EN-VOL-2] N82-17461

A theoretical study of three-body correlations in atomic fluids
N82-17989

NICKEL COMPOUNDS

The chemistry and detection of nickel carbonyl
N82-17278

An oxygen electrode based on nickel/cobalt spinel
[AD-A107602] N82-17443

NICKEL ZINC BATTERIES

Upgraded demonstration vehicle task report
[NASA-CR-168424] N82-18067

NICKEL-IRON BATTERIES

Electric and hybrid vehicle program
[DE82-000904] N82-18072

NIGHTGLOW

Observations of large scale F-region irregularities using airflow emissions at 7774 deg A and 6300 deg A
[INPE-2236-PRE/023] N82-17709

NITROGEN

Broad-band rotational cars thermometry in nitrogen gas
N82-17451

Nitrogen in ground water and surface water from sewered and unsewered areas, Nassau County, Long Island, New York
[PB82-109885] N82-17586

NITROGEN COMPOUNDS

A static screened potential method for the calculation of electronic transition properties of azabenzenes
N82-17272

NITROGEN HYDRIDES

Investigations of elementary reactions of the NHZ radical with a chemical radical source
[MPIS-2/1981] N82-17319

NITROGEN IONS

Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora
N82-17700

NITROGEN LASERS

A 16 muon CO2 bending mode laser system
[DE81-030123] N82-17498

Investigation of a cascade laser system: The excitations and interactions of N sub 2 in the ultraviolet and the near infrared
N82-17503

Photon echo modulation in LaF3:Pr3+ --- praseodymium doped lanthanum trifluoride
N82-17995

NITROGEN METABOLISM

Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters
N82-17846

NITROUS OXIDES

Multi-fuel low-NOx burner development, phase 2
[PB82-115494] N82-17687

NOCTURNAL VARIATIONS

Observations of large scale F-region irregularities using airflow emissions at 7774 deg A and 6300 deg A
[INPE-2236-PRE/023] N82-17709

NOISE MEASUREMENT

Sixth International Conference on Noise in Physical Systems
[PB82-105305] N82-17449

A study of the acoustic reflex as elicited by selected environmental noise stimuli
N82-17858

NOISE POLLUTION

Noise impact on communities from aircraft
[GPO-80-617] N82-17655

NOISE PROPAGATION

Helicopter propulsions systems. 1: Vibration prevention systems on helicopters 2: Problem of noise in the cabin
N82-17222

NOISE REDUCTION

Blade planform for a quiet helicopter
[NASA-CR-166256] N82-17121

Helicopter propulsions systems. 1: Vibration prevention systems on helicopters 2: Problem of noise in the cabin
N82-17222

NOISE SPECTRA

Sixth International Conference on Noise in Physical Systems
[PB82-105305] N82-17449

Two estimation methods for nonstationary spectra
[ENST-D-81006] N82-17926

NOISE TEMPERATURE

Sixth International Conference on Noise in Physical Systems
[PB82-105305] N82-17449

NOISE THRESHOLD

Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

A study of the acoustic reflex as elicited by selected environmental noise stimuli
N82-17858

NONADIABATIC THEORY

A derivation of the small-strain incremental theory of plasticity from thermomechanics
[OUEL-1371/81] N82-17539

NONDESTRUCTIVE TESTS

US Naval fleet aircraft corrosion
N82-17350

Detection and prevention of corrosion in Royal Air Force aircraft
N82-17351

Comparison between reliability, sensitivity and accuracy of nondestructive inspection methods
[NLR-MP-81009-U] N82-17515

An integrated scheme for NDA data evaluation
N82-18056

NONELECTROLYTES

Facilitated diffusion of small non-electrolytes in the human red blood cell
N82-17855

NONLINEAR EQUATIONS

The iterative solution of a non-linear Fredholm integral equation arising from a chemical reactor problem
[MATHS-RES-156] N82-17924

On L sub p-decay and scattering for nonlinear Klein-Gordon equations
[CTH-MATH-1981-17] N82-17929

Derivation of quasi-Newton updates for nonlinear equations and unconstrained optimization
N82-17933

NONLINEAR SYSTEMS

State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83876] N82-17440

Finite element methods for periodic solutions of dynamical systems
N82-17935

NONLINEARITY

Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-108] N82-17526

Implementation of anisotropic and nonlinear thermal stress models in ADINA 78
[AD-A108085] N82-17529

NONPARAMETRIC STATISTICS

A method of nonparametric survival analysis for doubly censored data
N82-17938

NORMAL DENSITY FUNCTIONS

Stochastic control system parameter identifiability
[NASA-CR-166300] N82-17898

NORTH CAROLINA
Depositional environments of the subsurface Cretaceous deposits of southeastern North Carolina
N82-17701

NORTHERN HEMISPHERE
Change of global climate during recent 100 years
N82-17775

NOSE TIPS
Development and laboratory testing of a thermal emission velocimeter for application to an erosion nose tip test facility
[AD-A107713] N82-17482

NOTCH SENSITIVITY
Load capacity of notched components as derived from post-yield fracture criteria --- for failure analysis of reactor components
[ISD-286] N82-17538

NOTCH TESTS
The influence of notch length and ligament length on the toughness of boron fiber reinforced aluminum
[DFVLR-FB-81-22] N82-17270

NOZZLE EFFICIENCY
Cambridge turbine: Geometry, test data and sample calculation N82-17182

NOZZLE GEOMETRY
Tests of a D vented thrust deflecting nozzle behind a simulated turbofan engine
[NASA-CR-3506] N82-17122

NOZZLE THRUST COEFFICIENTS
Tests of a D vented thrust deflecting nozzle behind a simulated turbofan engine
[NASA-CR-3506] N82-17122

NUCLEAR DEVICES
Mechanical Engineering Department technical review
[DE82-000303] N82-17509

NUCLEAR EXPLOSION EFFECT
Recent injections of nuclear debris in the atmosphere N82-17974

NUCLEAR EXPLOSIONS
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] N82-17722

NUCLEAR MAGNETIC RESONANCE
High pressure nuclear magnetic resonance studies of viscous fluids N82-17289
Nuclear magnetic resonance studies of transition metal complexes N82-17972
Relaxation phenomena in optically pumped mercury isotopes
[AD-A107604] N82-17978
High field NMR studies of static ordering and spin-energy coupling in MnF2 N82-18034

NUCLEAR MODELS
Nuclear matter with realistic Hamiltonians
N82-17971

NUCLEAR PARTICLES
Nuclear matter with realistic Hamiltonians
N82-17971
Computational methods for the nuclear- and neutron-matter problems
[DE82-001584] N82-17981

NUCLEAR PHYSICS
The origin of nulls mode changes and timing noise in pulsars
[PB82-115221] N82-18100

NUCLEAR QUADRUPOLE RESONANCE
Applications of nuclear quadrupole double resonance spectroscopy N82-17287

NUCLEAR REACTIONS
Neutron activation analysis of nuclides from stellar and man-induced nuclear reactions N82-17973
Orbiting effects in the inelastic scattering of protons to the continuum
[DE82-002287] N82-17980

NUCLEAR RESEARCH AND TEST REACTORS
Mechanical Engineering Department technical review
[DE82-000303] N82-17509

NUCLEAR SCATTERING
Elastic and inelastic scattering of 800 MeV/c K+/- mesons from carbon-12 and calcium-40 N82-17991

NUCLEON-NUCLEON INTERACTIONS
Nuclear matter with realistic Hamiltonians
N82-17971

NUCLIDES
Neutron activation analysis of nuclides from stellar and man-induced nuclear reactions N82-17973

NULL ZONES
The origin of nulls mode changes and timing noise in pulsars
[PB82-115221] N82-18100

NUMBER THEORY
A study of orders in quaternion algebras
[CTH-MATH-1981-16] N82-17926
On compositions of multisets N82-17949

NUMERICAL ANALYSIS
Results of calculations N82-17198
The through flow calculations N82-17199
NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916

NUMERICAL CONTROL
Prospects for materials (plastics, elastomers, paints). Volume 4: Plastic materials (appendix 2, automation and evolution of equipment for forming plastic materials)
[CETIM-12-B-194-VOL-4] N82-17365

NUMERICAL FLOW VISUALIZATION
Influence of correlations and computational procedures on flow field predictions N82-17181
Program FINSUP: Steady and unsteady supersonic flow in cascades by a finite element method
[PB82-114612] N82-17472

NUMERICAL STABILITY
Stability analysis of numerical methods for Volterra integral equations with polynomial convolution kernels
[MC-NW-109/81] N82-17917

NUMERICAL WEATHER FORECASTING
Investigation of models for large scale meteorological prediction experiments
[NASA-CR-168415] N82-17744
A verification study of the Improved Regional Rapid Analog System (IRRAS)
[AD-A107647] N82-17786

NUTRIENTS
The role of intestinal nerves in the nutrient induced intestinal hyperemia N82-17869

NUTRITION
Food crises and famines: The UNRISD food systems approach N82-17762

NUTRITIONAL REQUIREMENTS
In-flight diets and quantitative adequacy thereof to pilot expenditure N82-17813
Diet of crews of three main expeditions aboard Salyut-6 orbital station N82-17815

O

OCEAN BOTTOM
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations
N82-17732
Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results
N82-17735
On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741
The thermo-mechanical properties of the oceanic lithosphere N82-17806
An active source electromagnetic method for probing the Earth's electrical conductivity structure beneath the ocean floor N82-17809

OCEAN CURRENTS
Ocean influence on climate formation and changes N82-17780
Tidal variability in the current and temperature fields on the Southern California continental shelf
N82-17797
Underwater flow visualization methods in the upper layer of the ocean
[AD-A107919] N82-17801

OCEAN SURFACE
Meteorological products and some applications of Global Meteorological Satellite (GMS) data
N82-17751
Large-scale oceanographic variations in the western North Pacific N82-17778
Ocean influence on climate formation and changes N82-17780
Variations in the thermal structure and wind field occurring in the western Indian Ocean during the monsoons
[AD-A107761] N82-17800
Underwater flow visualization methods in the upper layer of the ocean
[AD-A107919] N82-17801
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

OCEAN TEMPERATURE
Meteorological products and some applications of Global Meteorological Satellite (GMS) data
N82-17751

OCEANOGRAPHIC PARAMETERS
Large-scale oceanographic variations in the western North Pacific N82-17778
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17798

OCEANOGRAPHY
Technology and oceanography: An assessment of federal technologies for oceanographic research and monitoring
[PB82-101718] N82-17807
The thermo-mechanical properties of the oceanic lithosphere N82-17806

OCEANS
Global tectonic control of secular variations in phanerozoic sedimentary rock/ocean/atmosphere chemistry N82-17545

OFFSHORE ENERGY SOURCES
Procedures for preparing regional transportation management plans --- oil and gas pipelines from outer continental shelves
[PB82-106162] N82-18075

OHIO RIVER (US)
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] N82-17676

OIL EXPLORATION
Evaluation of alternatives in downhole steam generation
[DE82-001943] N82-17574
Assessment of oil production volatile organic compound sources
[PB82-108176] N82-17684
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] N82-17722

OIL FIELDS
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] N82-17552
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] N82-17576

OIL RECOVERY
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] N82-17507
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] N82-17575
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] N82-17584

OIL SLICKS
Investigation of petroleum in the marine environs of the Strait of Juan de Fuca and Northern Puget Sound, part 2 (second-year continuation)
[PB82-104290] N82-17662
Performance testing of the DiPerna sweeper
[PB82-109174] N82-17668
Guide for spill prevention control and countermeasure inspectors
[PB82-115296] N82-17670

OILS
Development of methods for the stabilization of pyrolytic oils
[PB82-108150] N82-17321
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] N82-17455

OMEGA NAVIGATION SYSTEM
Differential Omega system development and evaluation
[AD-A107857] N82-17146

ON-LINE PROGRAMMING
PEP: An interactive programming system with an ALGOL-like programming language --- program editor and processor (PEP)
[MC-IW-172/81] N82-17892
Some thoughts on a Tuple oriented programming system
[MC-IW-174/81] N82-17894
ON-LINE SYSTEMS
PEP: An interactive programming system with an ALGOL-like programming language --- program editor and processor (PEP)
[MC-IW-172/81] N82-17892
Some thoughts on a Tuple oriented programming system
[MC-IW-174/81] N82-17894
Training of information specialists
[PB82-103227] N82-18063
ONBOARD DATA PROCESSING
An alternative approach to engineering structures using monitoring systems N82-17223
Automated Power Systems Management (APSM)
[NASA-CR-168423] N82-17258
ONBOARD EQUIPMENT
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238
OPACITY
Two-dimensional photometry of planetary nebulae N82-18083
OPERATING COSTS
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
An airline view of the corrosion problem N82-17352
Operating costs and characteristics of minibuses
[PB82-107036] N82-18076
OPERATIONAL HAZARDS
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553
OPERATIONAL PROBLEMS
METEOSAT-2: TO/NSO phase operations N82-17234
OPERATORS (MATHEMATICS)
Probabilistic treatment of relativistic scattering of scalar particles and their mass spectrum N82-17993
OPERATORS (PERSONNEL)
Time domain identification of an optimal control pilot model with emphasis on the objective function
[NASA-CR-168487] N82-17874
OPTICAL COUPLING
Low-energy behaviour of the real depth of the proton optical potential
[PB82-115213] N82-17984
OPTICAL DATA PROCESSING
Optical data processing for missile guidance
[AD-A107592] N82-17145
High resolution 3-D wavelength diversity imaging
[AD-A107832] N82-17480
OPTICAL FILTERS
Optical propagation through horizontally stratified, quasi-sinusoidal, phase gratings N82-17997
OPTICAL MEASUREMENT
Definition of the MAROTS reflector meridan line by interpolation: Application to optical measurements
[ESA-TT-696] N82-18003
OPTICAL MEASURING INSTRUMENTS
Density measurements in gas particle flows
[VKI-TM-32] N82-17471
An investigation of variable coherence sources and of some practical applications
[AD-A107715] N82-17999
Optical and infrared search for massive halos of galaxies N82-18086
OPTICAL PROPERTIES
An optical model for the microwave properties of sea ice
[NASA-TM-83865] N82-17561
Design, analysis, and test verification of advanced encapsulation systems --- low cost solar arrays
[NASA-CR-168406] N82-17605
Optical thin film coatings
[AD-A107806] N82-18001
Measurement of visible radiation transfer in water under laboratory and field conditions
[PB82-108481] N82-18004
Optical characterization of thin metallic and semiconducting films in the far infrared --- pumpd infrared lasers N82-18037
OPTICAL PUMPING
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh
[AD-A107939] N82-17491
Relaxation phenomena in optically pumped mercury isotopes
[AD-A107604] N82-17978
OPTICAL RADAR
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] N82-17803
OPTIMAL CONTROL
Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245
Person-by-person optimal solution to the decentralised LQG stochastic control problem with control sharing information pattern
[PB82-113457] N82-17944
OPTIMIZATION
Experimental verification of an aerodynamic parameter optimization program for wind tunnel testing
[AD-A107727] N82-17134
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
Parallel computation for developing nonlinear control procedures
[AD-A107914] N82-17227
Deconvolution of chromatograms
[AD-A107608] N82-17309
Derivation of quasi-Newton updates for nonlinear equations and unconstrained optimization N82-17933
ORBIT CALCULATION
Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500
ORBITAL ASSEMBLY
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations
[NASA-TM-58233] N82-17609
ORBITAL LAUNCHING
A rapid estimation of the lifetime of near Earth satellites for mission analysis
[INPE-2156-RPE/377] N82-17246
ORBITAL POSITION ESTIMATION
Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500
ORBITAL SPACE STATIONS
Gamma-ray instrumentation and its uses in space N82-17241
Advantages of space stations at the Earth-Moon libration points N82-17242
ORBITING DIPOLES
On the shape and orientation control of an orbiting shallow spherical shell structure
[NASA-CR-168420] N82-17243
ORDER-DISORDER TRANSFORMATIONS
Structural and dielectric investigation on the nature of the transition in a copolymer of vinylidene flouride and trifluoroethylene (54/46 Mol %)
[AD-A107846] N82-17379
Spectral diffusion in orientationally disordered organic solids
[AD-A107950] N82-18050
ORGANIC COMPOUNDS
Assessment of oil production volatile organic compound sources
[PB82-108176] N82-17034
Spectral diffusion in orientationally disordered organic solids
[AD-A107950] N82-18050
ORGANOMETALLIC COMPOUNDS
One-electron mechanisms in organometallic chemistry N82-17262
Characterization of the electronic and molecular structures of transition metal semiquinone and catecholate complexes N82-17329
Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365
OROGRAPHY
Meteorological settings associated with significant convective storms in Colorado
[PB82-106236] N82-17795
ORTHOSTATIC TOLERANCE
Juguler, right atrial pressure and cerebral hemodynamics of healthy man submitted to postural tests N82-17825
OSCILLATIONS
Note on planar undulator wiggler single electron motion
[AD-A108051] N82-17493
Effects on biological systems of electromagnetic oscillations in millimeter range of wavelengths N82-17849
OXIDATION
Modeling of SO2 oxidation in smog
[PB82-101932] N82-17323
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
OXIDATION RESISTANCE
Review of NASA progress in thermal barrier coatings for stationary gas turbines
[NASA-TM-81716] N82-17335
OXYGEN
Singlet-delta molecular oxygen as a tool for selective chemiluminescent detection in chromatography N82-17285
OXYGEN ANALYZERS
Rocket-borne instrumentation for the measurement of atomic oxygen based on chemical release in the lower thermosphere
[AERONOMICA-ACTA-A-231-1981] N82-17257
OXYGEN PRODUCTION
Separation of gas mixtures by selective extraction
[PB82-103839] N82-17324
OZONE
Example emission inventory documentation for 1982 ozone State Implementation Plans (SIPs)
[PB82-101906] N82-17877
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

P

P WAVES
An application of ray theory to the investigation of seismic head wave post-Pn phases N82-17736
PACIFIC OCEAN
Large-scale oceanographic variations in the western North Pacific N82-17776
PACKET SWITCHING
Next generation military aircraft will require hierarchical/multilevel information transfer systems --- packet switching N82-17114
Routing in networks
[AD-A107641] N82-17895
PACKET TRANSMISSION
Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086
Retransmission strategies for error control in packet transmission protocols N82-17110
Queueing analysis of synchronous time division multiplexing with individual source buffering
[NASA-CR-168443] N82-17252
PAINTS
The experience of corrosion on French military aerodynes N82-17355
Prospects for materials (plastics, elastomers, paints). Volume 5: Paints
[CETIM-12-B-194-VOL-5] N82 17386
PAIR PRODUCTION
QCD and weak asymmetries in lepton pair production N82-17965
PAKISTAN
Climatic data of Asia and Western Pacific, its availability, network, and applications N82-17750
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan N82-17753
PALEONTOLOGY
The biostratigraphy and taxonomy of Mesozoic radiolaria from the Samail Ophiolite and Hawasina Complex, Oman N82-17726

PANEL METHOD (FLUID DYNAMICS)
Application of multigrid methods for integral equations to two problems from fluid dynamics
[MC-NW-111/81] N82-17919

PANELS
Analysis of multiple load path panels containing impact damage N82-17170

PARABOLIC REFLECTORS
Definition of the MAROTS reflector meridan line by interpolation: Application to optical measurements
[ESA-TT-696] N82-18003

PARALLEL PROCESSING (COMPUTERS)
Parallel computation for developing nonlinear control procedures
[AD-A107914] N82-17227
CONA: Closed queueing network analyzer
[FUB-48-1980] N82-17900

PARAMAGNETIC RESONANCE
High field NMR studies of static ordering and spin-energy coupling in MnF2 N82-18034

PARAMETER IDENTIFICATION
A 10kW series resonant converter design, transistor characterization, and base-drive optimization
[NASA-CR-165546] N82-17439
Shaded computer graphic techniques for visualizing and interpreting analytic fluid flow models
[NASA-CR-168418] N82-17880
Stochastic control system parameter identifiability
[NASA-CR-168300] N82-17898
Parameter estimation in a reproducing kernel Hilbert space for linear hereditary systems N82-17932
Voyager 1 assessment of Jupiter's planetary magnetic field
[NASA-TM-83882] N82-18105

PARAMETERIZATION
Experimental verification of an aerodynamic parameter optimization program for wind tunnel testing
[AD-A107727] N82-17134
Model size and humidity effects on selected calibration parameters for the 16-ft transonic wind tunnel at AEDC
[AD-A107728] N82-17230

PARTICLE ACCELERATORS
Pixe and its application to the element analysis of Milan air particulate matter
[CISE-1685] N82-17656
The laser accelerator-another unicorn in the garden
[PB82-115197] N82-17982

PARTICLE BEAMS
Vertical coherent instabilities in bunched particle beams N82-17968
Vertical coherent instabilities in bunched particle beams
[DE82-003246] N82-17979
Quantum beats in photoionization current N82-18031

PARTICLE DENSITY (CONCENTRATION)
Density measurements in gas particle flows
[VKI-TM-32] N82-17471

PARTICLE DIFFUSION
Survey and evaluation of fine bubble dome diffuser aeration equipment
[PB82-105578] N82-17673

PARTICLE EMISSION
Example emission inventory documentation for 1982 ozone State Implementation Plans (SIPs)
[PB82-101908] N82-17677
Anomalous radon (222) emission and its association with earthquakes and tectonism N82-17739

PARTICLE INTERACTIONS
A space-time study of double scattering in hadron deuteron collisions N82-17985
Probabilistic treatment of relativistic scattering of scalar particles and their mass spectrum N82-17993
Functional integral approach to classical statistical dynamics N82-18006

PARTICLE MASS
The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961

PARTICLE PRECIPITATION
Intake design with particular reference to ice protection and particle separators N82-17218
Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments
[INPE-2119-RPE/343] N82-17711
Large horizontal electric fields measured at heights of the Brazilian magnetic anomaly and association to local energetic particle precipitation
[INPE-2120-RPE/344] N82-17712

PARTICLE SIZE DISTRIBUTION
Density measurements in gas particle flows
[VKI-TM-32] N82-17471
Aerosols distribution of microorganisms in a manned pressurized chamber and effect of artificial air ionization N82-17823

PARTICLE THEORY
Canonical quantization of non-abelian gauge theories N82-17963

PARTICULATE SAMPLING
Pixe and its application to the element analysis of Milan air particulate matter
[CISE-1685] N82-17656
Control of particulate emissions from atmospheric fluidized-bed combustion with fabric filters and electrostatic precipitators
[PB82-115526] N82-17683
Stratospheric CCN sampling program --- volcanology, Mount Saint Helens
[NASA-CR-168396] N82-17706

PARTITIONS (MATHEMATICS)
On compositions of multisets N82-17949

PASSENGERS
Initial interface standards for rapid transit car subsystem components
[PB82-104704] N82-18074

PATHOGENESIS
Prevention of staphylococcal infections during space flights N82-17818

PATTERN RECOGNITION
The cluster approach to the magnetic susceptibilities of low-dimensional copper clusters N82-17333

PAVEMENTS
Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408
Groove depth requirements for tine-textured rigid pavement 5: Durability of tine texturing on PCC pavements
[PB82-104951] N82-17413
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models
[PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study
[PB82-112913] N82-17415

PAYLOAD ASSIST MODULE
Study on the accommodation potentials of NADIR-oriented payloads on space shuttle
[DFVLR-FB-81-27] N82-17249

PENETROMETERS
Cone penetrometer and liquid limit
[PB82-113507] N82-17724

PERFORMANCE PREDICTION
Through flow calculations in axial turbomachines
[AGARD-AR-175] N82-17178
Influence of correlations and computational methods on the prediction of overall efficiency N82-17180
Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184
Hannover Turbine. Geometry, test data and sample calculation N82-17185
Part span damper loss prediction for transonic axial fan rotors N82-17192
Axial compressor stall and surge N82-17194
Summary of answers to the questionnaire N82-17195
Single stage transonic compressor and equivalent plane cascade N82-17196
The through flow calculations N82-17199
Evaluation of profile loss predictions based on diffusion factors N82-17200
Blade-to-blade computations and boundary layer corrections in axial compressors and turbines N82-17202
Solarization/conservation technology development for existing housing
[DE82-002175] N82-17407

PERFORMANCE TESTS
Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184
Hannover Turbine. Geometry, test data and sample calculation N82-17185
Single stage transonic compressor and equivalent plane cascade N82-17196
BBC/Sulzer. 4 stage transonic compressor N82-17197
The application of mechanical clamps to Portsmouth connectors
[AD-A107632] N82-17505
Performance testing of the DiPerna sweeper
[PB82-109174] N82-17668
Experimental investigation of the influence of high voltages on the performance of a plasma focus --- as regards neutron yield
[IPF-81-2] N82-18023

PERIODIC VARIATIONS
Present status of long-range weather forecasting N82-17755
On possible impacts of climatic variations on agriculture in China N82-17766
Ocean's role in processes of short-range climatic variation formation N82-17779
Ocean influence on climate formation and changes N82-17780
The impacts of climatic change on human society N82-17781
Effect of climate on the development of natural resources in Asia N82-17782
Improving the science of climate impact study N82-17783
Stochastic aspects of climatic transitions: Response to periodic forcing
[AERONOMICA-ACTA-A-234-1981] N82-17904

PERTURBATION
Neutron spectra produced by a fast pulse assembly in free field and perturbed environments N82-17992
Thermal perturbation of the Sun
[NASA-CR-168459] N82-18111
The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113

PERTURBATION THEORY
Molecular interactions with Many-Body Perturbation Theory
[AD-A107616] N82-17494
Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053
Origin of the initial inhomogeneities of the universe
[REPT-652] N82-18090

PETROLOGY
Petrology of the ultramafic xenoliths on the Koolau shield, Oahu, Hawaii. Part 1: Liquidus phase relations on the join anorthite-forsterite-silica at 10 kbar, part 2 N82-17727

PH
Determination of volatile organics in industrial and municipal wastewaters
[PB82-119090] N82-17320

PHASE DEMODULATORS
Phase demodulator with high temporal and angular resolution for the measurement of Faraday rotation by means of a carrier frequency --- in plasma experiments
[IPF-81-4] N82-17441

PHASE SHIFT
Cavity lifetime phase-shift method for sensitive reflectance measurements at mid-infrared wavelengths
[ATR-82(8448)-1] N82-17423

PHASE TRANSFORMATIONS
Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036

PHENYLS
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295

PHILIPPINES
On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741
Climatic data of Asia and Western Pacific, its availability, network, and applications N82-17750
Regionality of climatic change in monsoon Asia N82-17777

PHOSPHATES
Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596

PHOSPHINES
Planar, square-pyramidal and macrocyclic transition metal complexes prepared from linear tetradentate diaminodiphosphine ligands N82-17330
PHOSPHORESCENCE
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279
PHOSPHORIC ACID
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-166684] N82-17615
PHOSPHORUS COMPOUNDS
Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA)
[AD-A107674] N82-17840
PHOSPHORUS METABOLISM
Features of metabolic disturbances in rat myocardium under effect of alternating magnetic fields of different parameters N82-17846
PHOTOABSORPTION
A density functional approach to many-body effects in the optical response of atoms N82-17964
PHOTOACOUSTIC SPECTROSCOPY
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279
PHOTOCHEMICAL REACTIONS
Effects of multiple scattering and surface albedo on the photochemistry of the troposphere
[NASA-CR-168417] N82-17707
PHOTODIODES
Moderate temperature detector development
[NASA-CR-167504] N82-17998
PHOTODISSOCIATION
Energy partitioning in the dissociation of cyanogen at 193nm
[AD-A107773] N82-17303
Photodissociation of metal-halides: Lasers, absorption lineshape, and polarization of fluorescence studies N82-17990
Mossbauer studies on partially oriented samples of carbon monoxymyoglobin and photodissociated carbon monoxymyoglobin N82-18038
PHOTOELASTIC ANALYSIS
Stress intensity for interacting flaws. Part 3: Photoelastic determination of mixed modes; stress intensity factors for interacting flaws
[OUEL-1368/81-PT-3] N82-17542
PHOTOELECTRIC CELLS
Luminescent photoelectrochemical cells. 6: Spatial aspects of the photoluminescence and of cadmium selenide electrodes
[AD-A107580] N82-17310
Luminescent photoelectrochemical cells. 7: Photoluminescent and electroluminescent properties of cadmium sulfo-selenide electrodes
[AD-A107581] N82-17311
PHOTOELECTRIC EMISSION
Angle-resolved photoemission study of Co-Co (0001)
[AD-A107575] N82-17304
PHOTOELECTROCHEMICAL DEVICES
Effects of temperature on excited-state description of luminescent photoelectrochemical cells employing tellurium-doped cadmium sulfide electrodes
[AD-A107640] N82-17306
PHOTOELECTRONS
Example emission inventory documentation for 1982 ozone State Implementation Plans (SIPs)
[PB82-101906] N82-17677
PHOTOGRAMMETRY
Photogrammetry software. A package for everyone
[AD-A106096] N82-17570
PHOTOGRAPHIC MEASUREMENT
Stratospheric aerosol properties from Earth limb photography and Mie scattering theory
[AERONOMICA-ACTA-A-235-1981] N82-17705
PHOTOINTERPRETATION
Hypervelocity impact instrumentation development
[AD-A107652] N82-17484
Arabian sea project of 1980: Composites of infrared images
[AD-A107910] N82-17567
PHOTOIONIZATION
Quantum beats in photoionization current N82-18031
PHOTOLUMINESCENCE
Luminescent photoelectrochemical cells. 6: Spatial aspects of the photoluminescence and of cadmium selenide electrodes
[AD-A107580] N82-17310
PHOTOMETERS
Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora N82-17700
PHOTONS
Photon echo modulation in LaF3:Pr3+ — praseodymium doped lanthanum trifluoride N82-17995
PHOTOOXIDATION
Sulfur balance in outdoor smog chambers and resulting implications for sulfur dioxide photooxidation studies N82-17651
PHOTOSYNTHESIS
The structure and function of chlorophyll-proteins in photosystem 1 and the light harvesting complex of photosystem 2 N82-17611
PHOTOVOLTAIC CELLS
Design, analysis, and test verification of advanced encapsulation systems
[NASA-CR-168407] N82-17604
Solar-cell project
[DE82-901101] N82-17628
PHTHALOCYANIN
Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365
Surface analysis applied to thin films of molecular solids N82-18040
PHYSICAL FITNESS
Physical performance tasks required of U. S. Marines operating in a desert environment
[AD-A107666] N82-17863
PHYSIOLOGICAL EFFECTS
USSR report: Space biology and aerospace medicine, vol. 15, no. 5, Sep. - Oct. 1981
[JPRS-79346] N82-17812
Effects of ambient parameters on man N82-17826
Method of assessing individual resistance of rats to hypoxic hypoxia N82-17837
Respiratory toxicology, 1981
[AD-A107672] N82-17341
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans N82-17860
Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866
PHYSIOLOGICAL RESPONSES
Human auditory brainstem electric responses to binaural and monaural stimuli N82-17861
PICOSECOND PULSES
Picosecond studies of solvent-solute interactions N82-17290
PIEDMONTS
The kinematic and metamorphic development of the Towaliga-Goat Rock mylonites, Georgia-Alabama N82-17730
PIEZOELECTRICITY
USRD type F63 transducer
[AD-A106746] N82-17959
PIGEONS
Study of homing pigeons in Brazil: Some preliminary results
[INPE-2248-PRE/032] N82-17839
PILOT PERFORMANCE
Time domain identification of an optimal control pilot model with emphasis on the objective function
[NASA-CR-168487] N82-17874
PILOT PLANTS
Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652
PILOT TRAINING
Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873
PION BEAMS
The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961
PIPELINES
Applicability of linear elastic fracture mechanics to rigid PVC pipe materials
[MIT-RR-R81-1] N82-17523
Procedures for preparing regional transportation management plans — oil and gas pipelines from outer continental shelves
[PB82-106162] N82-18075
PIPES (TUBES)
Applicability of linear elastic fracture mechanics to rigid PVC pipe materials
[MIT-RR-R81-1] N82-17523
Applicability of plane strain fracture toughness testing techniques to polyethylene pipe materials
[MIT-RR-R81-3] N82-17524
PITTING
Fracture mechanics based modelling of the corrosion fatigue process N82-17344
PLANE STRAIN
Applicability of plane strain fracture toughness testing techniques to polyethylene pipe materials
[MIT-RR-R81-3] N82-17524
PLANETARY ATMOSPHERES
Climate circulation processes in South-East Asia during winter monsoon N82-17769
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104
PLANETARY MAGNETIC FIELDS
Voyager 1 assessment of Jupiter's planetary magnetic field
[NASA-TM-83862] N82-18105
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83861] N82-18106
PLANETARY NEBULAE
Two-dimensional photometry of planetary nebulae N82-18083
PLANETARY SURFACES
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104
PLANKTON
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600
PLANNING
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
PLANT DESIGN
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] N82-17397
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] N82-17603
Controller design for unknown multivariable systems using monotone modeling errors
[RR-144] N82-17899
PLASMA CLOUDS
H2 emission in molecular clouds N82-18101
PLASMA COMPOSITION
The plasma ion composition in the high-latitude magnetospheric boundary layer according to Prognoz-7 data
[REPT-656] N82-17697
PLASMA CONTROL
Studies of runaway electron transpot in PLT and PDX N82-18005
Electron cyclotron resonance heating of tandem mirrors at relativistic energies
[AD-A107944] N82-18018
PLASMA CURRENTS
Model calculations of the tearing instability associated with ac-modulation of the plasma-current in Tokamaks
[IPP-6/196] N82-18013
PLASMA DENSITY
On the relation between plasma and neutral gas profiles in a cold gas blanket system
[TRITA-PFU-81-03] N82-18021
PLASMA DIAGNOSTICS
Experimental determination of the electron energy distribution function in plasmas
[INPE-2107-RPE/333] N82-18010
PLASMA DRIFT
Stabilization of the lower hybrid drift instability by resonant electrons
[AD-A107652] N82-18014

Review of the lower hybrid drift instability and its saturation mechanisms
[AD-A107550] N82-18016

PLASMA DYNAMICS

Review of the lower hybrid drift instability and its saturation mechanisms
[AD-A107550] N82-18016

PLASMA EQUILIBRIUM

First-order toroidal correction to the minimum energy state of a cylindrical plasma column of finite beta
[REPT-81-133] N82-18011

PLASMA FOCUS

Microinstabilities in a radially contracting inhomogeneous cylindrical plasma slab. Part 2: Lower hybrid and electron cyclotron drift instabilities in the plasma focus
[IPF-80-13-PT-2] N82-18022

Experimental investigation of the influence of high voltages on the performance of a plasma focus --- as regards neutron yield
[IPF-81-2] N82-18023

PLASMA FREQUENCIES

The dynamics of microprocesses and current turbulent heating of ions in Uragan-2 stellarator
[IPPJ-548] N82-18008

PLASMA JETS

Spectroscopy of molecular plasmas and kinetics of excited states
[LP-187] N82-18025

PLASMA PINCH

Resistive interchange modes in reversed field pinches
[AD-A108129] N82-18019

PLASMA SLABS

Microinstabilities in a radially contracting inhomogeneous cylindrical plasma slab. Part 2: Lower hybrid and electron cyclotron drift instabilities in the plasma focus
[IPF-80-13-PT-2] N82-18022

PLASMA SPRAYING

Effects of arc current on the life in burner rig thermal cycling of plasma sprayed ZrOsub2-Ysub2Osub3
[NASA-TM-82795] N82-17453

PLASMA TURBULENCE

Radial evolution of power spectra of interplanetary Alfvenic turbulence
[IPS-81-13] N82-18097

Statistical properties of MHD fluctuations associated with high speed streams from HELIOS 2 observations
[IPS-81-5] N82-18117

PLASMA WAVES

Stabilization of the lower hybrid drift instability by resonant electrons
[AD-A107652] N82-18014

PLASMA-ELECTROMAGNETIC INTERACTION

Differences between solar wind plasmoids and ideal magnetohydrodynamic filaments
[AERONOMICA-ACTA-A-232-1981] N82-18110

PLASMAPAUSE

Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

PLASMAS (PHYSICS)

Investigation of spectroscopic properties of flames and plasmas via computer controlled instrumentation
N82-17326

Experimental determination of the electron energy distribution function in plasmas
[INPE-2107-RPE/333] N82-18010

Differences between solar wind plasmoids and ideal magnetohydrodynamic filaments
[AERONOMICA-ACTA-A-232-1981] N82-18110

PLASMASPHERE

Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

PLASTIC COATINGS

Polymer coated electrodes as microelectrochemical media N82-17366

PLASTIC DEFORMATION

Superplastic aluminum evaluation
[AD-A107760] N82-17336

Survey of advanced fracture-mechanics test methods
[DE82-000823] N82-17535

PLASTIC FLOW

Necking, fracture and localization of plastic flow in metals N82-17525

PLASTICS

Prospects for materials (plastics, elastomers, paints): Volume 1: Plastic materials (appendix 1, plastification systems)
[CETIM-12-B-194-VOL-1] N82-17382

Prospects for materials (plastics, elastomers, paints). Volume 2: Plastic materials (assessment and evolution of applications of plastic materials for mechanical constructions)
[CETIM-12-B-194-VOL-2] N82-17383

Prospects for materials (plastics, elastomers, paints). Volume 3: Plastic materials (appendix 3, computer assisted design approach to injection molds)
[CETIM-12-B-194-VOL-3] N82-17384

Prospects for materials (plastics, elastomers, paints). Volume 4: Plastic materials (appendix 2, automation and evolution of equipment for forming plastic materials)
[CETIM-12-B-194-VOL-4] N82-17385

PLATE THEORY

Inelastic buckling of columns of L and U cross section --- calculated using a flow boundary formulation
[ESA-TT-709] N82-17544

PLATES (TECTONICS)

The seismicity of forearc marginal wedges (accretionary prisms) and seismotectonics of convergent margins N82-17726

Time dependent thermal modeling of plate tectonic processes N82-17737

On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741

The thermo-mechanical properties of the oceanic lithosphere N82-17808

PLATING

Optical thin film coatings
[AD-A107808] N82-18001

PLATINUM ISOTOPES

Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] N82-17615

PLOTTING

Principal components biplots and alpha and beta diversity --- of diatoms in moorland pools
[IWIS-A-81-ST-23-15] N82-17923

PLY ORIENTATION

PATCHES-3. User's guide for involute composites
[AD-A107750] N82-17260

PNEUMOGRAPHY

Portable medical status and treatment system
[NASA-CR-167496] N82-17882

POISSON DENSITY FUNCTIONS

Two papers on recursive evaluation of compound distributions
[AD-A107912] N82-17914

POLAR REGIONS

The plasma ion composition in the high-latitude magnetospheric boundary layer according to Prognoz-7 data
[REPT-658] N82-17697

High latitude dayside precipitating electron regions during the Southern hemisphere summer and their dependence of IMF and K sub p
[IPS-81-4] N82-17717

POLARIMETERS

Phase demodulator with high temporal and angular resolution for the measurement of Faraday rotation by means of a carrier frequency --- in plasma experiments
[IPF-81-4] N82-17441

Solar X-ray flares: Spectroscopic results from the eighth Orbiting Solar Observatory and the development of a Space Shuttle Borne Polarimeter N82-18109

POLARIZATION (SPIN ALIGNMENT)

Polarization mechanisms in phase 2 poly (vinylidene fluoride) films
[AD-A107850] N82-18049

POLARIZATION CHARACTERISTICS

Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

POLARIZED LIGHT

Photodissociation of metal-halides: Lasers, absorption lineshape, and polarization of fluorescence studies N82-17990

POLICIES

The Delaware River Basin comprehensive (level B) study
[PB82-111477] N82-17679

Urban decentralization and the role of public transportation
[PB82-114844] N82-18079

Urban decentralization and the role of public transportation. Executive summary
[PB82-114836] N82-18080

POLLUTION CONTROL

Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596

Sulfur balance in outdoor smog chambers and resulting implications for sulfur dioxide photooxidation studies N82-17651

Noise impact on communities from aircraft
[GPO-80-617] N82-17655

Modification of spill factors affecting air pollution. Volume 1: An evaluation of cooling as a vapor mitigation procedure for spilled volatile chemicals
[PB82-108382] N82-17657

Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658

Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17659

Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17664

Health effects of carbon monoxide and ozone
[PB82-114265] N82-17666

POLLUTION MONITORING

Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] N82-17584

A hazardous materials spill warning system
[PB82-108424] N82-17665

Guide for spill prevention control and countermeasure inspectors
[PB82-115296] N82-17670

Detection and mapping of insoluble sinking pollutants
[PB82-105586] N82-17674

POLLUTION TRANSPORT

Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] N82-17584

A comparison of in-cloud HCl concentrations from the NASA/MSFC MDM to measurements for the space shuttle launch
[NASA-CR-167497] N82-17653

Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] N82-17678

Stratospheric CCN sampling program --- volcanology, Mount Saint Helens
[NASA-CR-166396] N82-17706

Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806

POLYATOMIC MOLECULES

Energy transfer in molecular collisions
N82-17970

POLYCRYSTALS

Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

Electronic structure of grain boundaries and interfaces in polycrystalline zinc oxide
[AD-A107864] N82-18046

POLYETHYLENES

Applicability of plane strain fracture toughness testing techniques to polyethylene pipe materials
[MIT-RR-R81-3] N82-17524

POLYIMIDES

Improved tack PMR
[NASA-CR-165432] N82-17367

POLYMER PHYSICS

Basic research on macromolecular dynamics
[PB82-115502] N82-17389

POLYMERIC FILMS

Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17262

Polymer coated electrodes as microelectrochemical media N82-17366

Transparent polyolefin film armor
[AD-A107582] N82-17377
Surface analysis applied to thin films of molecular solids N82-18040

POLYMERIZATION
The structural formation and physical behaviour of cross-linked epoxy resins
[RAE-LIB-TRANS-2067] N82-17268
Synthesis of fungicidal vinyl and acrylic latices by emulsion polymerization
[AD-A107848] N82-17372
Development of high sensitivity X-ray and electron-beam resist processes
[AD-A107833] N82-17374
Investigation of in-situ gelation to control emissions from abandoned hazardous waste sites
[PB82-103506] N82-17409

POLYNOMIALS
Stability analysis of numerical methods for Volterra integral equations with polynomial convolution kernels
[MC-NW-109/81] N82-17917
F-purity and rational singularity N82-17936

POLYNUCLEAR ORGANIC COMPOUNDS
Organic grains and the spectrum of the galatic centre source IRS 7 --- IR source (IRS)
[PREPRINT-56] N82-17265
A comparison of methods to enhance sensitivity in analytical molecular luminescence and photoacoustic condensed phase spectrometry N82-17279

POLYPEPTIDES
Formation constant and photolabeling of gramicidin channels in lipid bilayer membranes N82-17277

POLYTETRAFLUOROETHYLENE
Performance of PTFE-lined composite journal bearings
[NASA-TM-82779] N82-17263

POLYTOPES
Combinatorial maps N82-17954

POLYURETHANE FOAM
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108895] N82-17667

POLYVINYL CHLORIDE
Applicability of linear elastic fracture mechanics to rigid PVC pipe materials
[MIT-RR-R81-1] N82-17523

POLYVINYL FLUORIDE
Polarization mechanisms in phase 2 poly (vinylidene fluoride) films
[AD-A107850] N82-18049

PONDS
Hydrology and hydrogeochemistry of the south fork, Wright Valley, Southern Victoria Land, Antarctica N82-17546
Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652

POPULATIONS
The stable pedigrees of critical branching populations
[CTH-MATH-1981-15] N82-17927

POROSITY
Effects of preignition on pulverized-coal combustion
[DE82-002565] N82-17313

PORPHYRINS
Perturbed angular correlation studies of electric field gradients in metalloporphyrins N82-17365

PORTABLE EQUIPMENT
The chemistry and detection of nickel carbonyl N82-17278
Portable medical status and treatment system
[NASA-CR-167496] N82-17862

POSITION (LOCATION)
Three-dimensional shape and position of Venus's bow shock
[REPT-656] N82-18102

POSITION ERRORS
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] N82-17803

POSITIONING
Positioning of multi stopband notches in staggered-PRF MTI filters
[LEOK-TR-1979-11] N82-17427

POSITIONING DEVICES (MACHINERY)
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] N82-17554

POSITRON ANNIHILATION
The Fermi surface reconstructed momentum density of V3Si from positron annihilation experiments N82-18039

POTABLE WATER
Assay of dissolved carbon in reclaimed water produced in spacecraft water supply systems N82-17838

POTASSIUM COMPOUNDS
Defect structure in the alkali-gallate fast ion conductors N82-18033

POTENTIAL ENERGY
First-order toroidal correction to the minimum energy state of a cylindrical plasma column of finite beta
[REPT-81-133] N82-18011

POTENTIAL THEORY
A correction to the engineering theory of elastic stability
[OUEL-1376/81] N82-17540

POTTING COMPOUNDS
Design, analysis, and test verification of advanced encapsulation systems
[NASA-CR-168407] N82-17604

POWDER METALLURGY
Microstructural effects in abrasive wear
[DE82-003653] N82-17339

POWER CONDITIONING
A study of the selection of microcomputer architectures to automate planetary spacecraft power systems
[NASA-CR-168412] N82-17259
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] N82-17634

POWER EFFICIENCY
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[ERG-034] N82-17459

POWER GAIN
Commutated automatic gain control system
[NASA-CR-168440] N82-17140

POWER SPECTRA
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17868
Radial evolution of power spectra of interplanetary Alfvenic turbulence
[IPS-81-13] N82-18097

POWER TRANSMISSION (LASERS)
Solar Power Satellites
[PB82-108846] N82-17647

PRASEODYMIUM
Photon echo modulation in LaF3:Pr3+ --- praseodymium doped lanthanum trifluoride N82-17995

PRECIPITATION (METEOROLOGY)
Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695
Investigation of models for large scale meteorological prediction experiments
[NASA-CR-168415] N82-17744
Regionality of climatic change in monsoon Asia N82-17777
A statistical analysis of monthly precipitation in Denmark
[DMI-CLIMATOL-PAPERS-7] N82-17789

PRECISION
New technology challenges metrology
[PB82-105974] N82-17416

PREDICTION ANALYSIS TECHNIQUES
Review of performance prediction methods N82-17179
Deviation/turning angle correlations N82-17193
Present status of long-range weather forecasting N82-17755
A statistical analysis of monthly precipitation in Denmark
[DMI-CLIMATOL-PAPERS-7] N82-17789
Two-channel linear-predictive spectral analysis: Program for the HP 9845 desk calculator
[AD-A107634] N82-17889
A discrete-time multivariable criterion for limit cycle predictions
[OUEL-1369/81] N82-17902
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83881] N82-18054

PREDICTIONS
Projection pursuit
[AD-A107817] N82-17910

PRESSURE CHAMBERS
Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man N82-17827

PRESSURE DRAG
Part span damper loss prediction for transonic axial fan rotors N82-17192

PRESSURE EFFECTS
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
Climatic change and social disturbance N82-17773

PRESSURE GRADIENTS
An equation of state for fluid ethylene
[PB82-107673] N82-17325

PRESSURE MEASUREMENT
Tubing systems for the measurement of fluctuating pressures in wind engineering
[OUEL-1370/81] N82-17231

PRESSURE REDUCTION
Part span damper loss prediction for transonic axial fan rotors N82-17192
Transport characteristics of alternate slurry fuels
[DE82-003019] N82-17394

PRESSURE VESSELS
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
Dynamic elastic-plastic characterization of nuclear pressure vessel material
[CISE-1693] N82-17528

PRESSURIZED WATER REACTORS
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions
[VTT-88] N82-17340

PREVENTION
Food crises and famines: The UNRISD food systems approach N82-17762

PRINTED CIRCUITS
High frequency semiconductor testing
[DE82-000926] N82-17445
Solderability improvements for drag soldered PWBs
[DE82-000961] N82-17446
Thick-film analysis: Literature search and bibliography
[DE82-000960] N82-17447

PROBABILITY DISTRIBUTION FUNCTIONS
Evaluation of a pyrotechnic actuator concept by means of the probit statistical method. Justification of the choice of this method; application; examples of application
[ESA-TT-694] N82-17403

PROBABILITY THEORY
Stage-state reliability analysis technique N82-17104

PROBLEM SOLVING
An iterative method for solving electrostatic problems
[AD-A107740] N82-17956

PROCESS CONTROL (INDUSTRY)
Study of the industrial use of organic additives for tempering --- of steels
[CETIM-1-2G-15-0] N82-17341
Prospects for materials (plastics, elastomers, paints). Volume 4: Plastic materials (appendix 2, automation and evolution of equipment for forming plastic materials)
[CETIM-12-B-194-VOL-4] N82-17385

PRODUCT DEVELOPMENT
Solderability improvements for drag soldered PWBs
[DE82-000961] N82-17446
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] N82-17635
Moderate temperature detector development
[NASA-CR-167504] N82-17998

PRODUCTION
The 18th Project Integration Meeting
[NASA-CR-168431] N82-17614

PRODUCTION ENGINEERING

Prospects for materials (plastics, elastomers, paints). Volume 2: Plastic materials (assessment and evolution of applications of plastic materials for mechanical constructions)
[CETIM-12-B-194-VOL-2] N82-17383

PRODUCTION PLANNING

Assured load carrying capability and capacity credit N82-17624

PRODUCTIVITY

Psycho-social aspects of productivity in underground coal mining
[NASA-CR-168429] N82-17551

PROGRAM VERIFICATION (COMPUTERS)

SAVANT: A database manipulation technique for system architecture design verification and analysis N82-17095

State-of-the-art computer monitoring equipment N82-17116

F/A-18 weapons system support facilities N82-17120

Another proof for the completeness of a rule for the fair termination of guarded commands and another rule for their just termination
[MC-IW-178/81] N82-17922

PROGRAMMING LANGUAGES

Some thoughts on a Tuple oriented programming system
[MC-IW-174/81] N82-17894

Introduction to the central Scientific Computing Facilities
[DE82-003256] N82-17896

An operational semantics for bonded nondeterminism equivalent to a denotational one
[MC-IW-169/81] N82-17953

PROJECT MANAGEMENT

Report of the third session of the West African Monsoon Experiment (WAMEX) scientific regional committee --- conference proceedings, 10-14 Nov. 1980
[GARP-SPEC-REPT-37] N82-17721

Order: A program package for information on management of staff activities and expenditures
[EUR-7442-EN] N82-18056

PROJECT PLANNING

Technology and oceanography: An assessment of federal technologies for oceanographic research and monitoring
[PB82-101718] N82-17807

Expected use of micro-based network analysis
[AD-A107680] N82-18057

PROJECTILE CRATERING

Analysis methods for ballistic damage size and type N82-17163

PROJECTILES

Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160

Description of projectile threats N82-17161

Analysis methods for predicting structural response to projectile impact N82-17162

Analysis methods for ballistic damage size and type N82-17163

Damage from High explosive (HE) projectiles N82-17164

Damage from engine debris projectiles N82-17165

Effects of cyclic loading on projectile impact damage N82-17167

Stiffness degradation of impact damaged structure N82-17168

Strength degradation of impact damaged structure N82-17169

PROLATE SPHEROIDS

Analysis of the curved junction edge between a flat plate and a prolate spheroid
[AD-A106543] N82-17130

PROPELLANTS

Application of a high power laser to demilitarization problems
[AD-A106659] N82-17489

PROPELLER BLADES

Roll up model for rotor wake vortices, part 5
[ASRL-TR-194-4] N82-17127

PROPULSION SYSTEM CONFIGURATIONS

Helicopter propulsion systems: Past, present and future N82-17204

Aircraft turbine engine development: Current practices and new priorities N82-17206

Future technology and requirements for helicopter engines N82-17207

Advanced component development design basis for next generation medium power helicopter engines N82-17209

Component research for future propulsion systems N82-17224

Future requirements for helicopter propulsion systems N82-17225

PROPULSION SYSTEM PERFORMANCE

Influence of correlations and computational methods on the prediction of overall efficiency N82-17180

Survey on the effect of blade surface roughness on compressor performance N82-17191

Axial compressor stall and surge N82-17194

Helicopter propulsion systems: Past, present and future N82-17204

Aircraft turbine engine development: Current practices and new priorities N82-17206

Future technology and requirements for helicopter engines N82-17207

Mechanical advances in the design of small turboshaft engines N82-17208

Advanced component development design basis for next generation medium power helicopter engines N82-17209

Aerodynamic components for small turboshaft engines N82-17211

Regenerative helicopter engines: Advances in performance and expected development problems N82-17212

Advanced transmission component development N82-17214

Helicopter propulsions systems. 1: Vibration prevention systems on helicopters 2: Problem of noise in the cabin N82-17222

PROPULSIVE EFFICIENCY

Mechanical advances in the design of small turboshaft engines N82-17208

The distress regime on the bimotored helicopter N82-17219

PROTECTION

Defense of radio-electronic equipment
[AD-A108114] N82-17430

PROTECTIVE COATINGS

Corrosion prevention measures used in the construction of an aircraft airframe: The case of 2014 and 2214 alloys N82-17360

Recent developments in materials and processes for aircraft corrosion control N82-17361

New concepts in multifunctional corrosion for aircraft and other systems N82-17362

Corrosion in naval aircraft electronic systems N82-17363

Corrosion protection schemes for aircraft structures: Some examples for the corrosion behaviour of Al alloys N82-17364

PROTEIN METABOLISM

Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors N82-17816

Effect of space flights of different duration on energy metabolism of human erythrocytes N82-17817

Rat amino acid composition after flight aboard Cosmos-1129 biosatellite N82-17831

Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite N82-17832

Blood fibrinogen as related to immersion in water for seven days and short-term space flight N82-17836

PROTEIN SYNTHESIS

The structure and function of chlorophyll-proteins in photosystem 1 and the light harvesting complex of photosystem 2 N82-17811

Influence of electromagnetic waves in millimeter band on inductoprotein synthesis of penicillinase by staphylococcus aureus N82-17847

PROTON BEAMS

Small sample assay station users guide
[LA-8731-M] N82-17485

PROTONS

Orbiting effects in the inelastic scattering of protons to the continuum
[DE82-002287] N82-17980

Low-energy behaviour of the real depth of the proton optical potential
[PB82-115213] N82-17984

Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

PROTUBERANCES

Streamwise vorticity decay downstream of a three dimensional protuberance
[AD-A108080] N82-17466

PROVING

Another proof for the completeness of a rule for the fair termination of guarded commands and another rule for their just termination
[MC-IW-178/81] N82-17922

PROVISIONING

Climate applications to agricultural problems N82-17759

Food crises and famines: The UNRISD food systems approach N82-17762

PSYCHOACOUSTICS

Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults N82-17857

Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans N82-17860

PSYCHOLOGICAL EFFECTS

Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851

PSYCHOLOGICAL FACTORS

Psycho-social aspects of productivity in underground coal mining
[NASA-CR-168429] N82-17551

PSYCHOPHYSIOLOGY

Cerebral hemispheric activity and automonic nervous function N82-17868

PUBLIC HEALTH

Health effects of carbon monoxide and ozone
[PB82-114265] N82-17886

PULSARS

Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

The distribution of free electrons in the inner galaxy from pulsar dispersion measures
[NASA-TM-83875] N82-18096

The origin of nulls mode changes and timing noise in pulsars
[PB82-115221] N82-18100

PULSE COMMUNICATION

Satellite applications to electric-utility communications needs --- land mobile satellite service
[NASA-CR-168430] N82-17253

PULSE RADAR

Positioning of multi stopband notches in staggered-PRF MTI filters
[LEOK-TR-1979-11] N82-17427

PULSED LASERS

Study of fundamental chemical processes in explosive decomposition by laser-powered homogeneous pyrolysis
[AD-A108022] N82-17393

Kinetic processes in high pressure gases: Excited state collisions
[AD-A108128] N82-1749[illegible]

Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] N82-17803

PULSED RADIATION

Neutron spectra produced by a fast pulse assembly in free field and perturbed environments N82-17992

PUMPING

Digital model of the unconsolidated aquifer system in the Modesto area, Stanislaus and San Joaquin Counties, California
[PB82-102559] N82-17593

PURIFICATION

Granular activated carbon installations
[PB82-102492] N82-17659

PYRIDOXINE

Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia N82-17824

PYROELECTRICITY

Calibration of pyroelectric radiometers for infrared flare measurements
[AD-A107648] N82-17481

PYROLYSIS

Effects of preignition on pulverized-coal combustion
[DE82-002586] N82-17313

Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000782] N82-17315

Study of fundamental chemical processes in explosive decomposition by laser-powered homogeneous pyrolysis
[AD-A108022] N82-17393

PYROLYTIC MATERIALS

Development of methods for the stabilization of pyrolytic oils
[PB82-108150] N82-17321

PYROTECHNICS

Evaluation of a pyrotechnic actuator concept by means of the probit statistical method. Justification of the choice of this method; application; examples of application
[ESA-TT-694] N82-17403

Q

QUADRATIC EQUATIONS

A study of orders in quaternion algebras
[CTH-MATH-1981-16] N82-17928

QUALITY CONTROL

Evaluation of a pyrotechnic actuator concept by means of the probit statistical method. Justification of the choice of this method; application; examples of application
[ESA-TT-694] N82-17403

High frequency semiconductor testing
[DE82-000926] N82-17445

Manual of ground-water quality sampling procedures
[PB82-103045] N82-17660

An integrated scheme for NDA data evaluation
N82-18055

QUANTITATIVE ANALYSIS

A model for essential hypertension: Metabolic studies N82-17667

QUANTUM CHEMISTRY

Energy partitioning in the dissociation of cyanogen at 193nm
[AD-A107773] N82-17303

Molecular interactions with Many-Body Perturbation Theory
[AD-A107616] N82-17494

QUANTUM CHROMODYNAMICS

QCD and weak asymmetries in lepton pair production N82-17965

QUANTUM MECHANICS

Quantum beats in photoionization current
N82-18031

QUANTUM THEORY

Quantum corrections to the properties of dense plasmas
[LP-189] N82-18026

Interacting quantum field theory in curved space-time N82-18052

Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053

QUARKS

The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961

Canonical quantization of non-abelian gauge theories N82-17963

A model for hadronic inclusive cross-sections
[PB82-115205] N82-17963

A quark model of the nonstrange baryons
N82-17968

QUARTZ CRYSTALS

Study of defects produced by the growth, post treatment and fabrication of quartz
[AD-A107771] N82-18048

QUATERNIONS

A study of orders in quaternion algebras
[CTH-MATH-1981-16] N82-17928

QUEUEING THEORY

Queueing analysis of synchronous time division multiplexing with individual source buffering
[NASA-CR-168443] N82-17252

CQNA: Closed queueing network analyzer
[FUB-48-1980] N82-17900

R

RADAR

An overview on incoherent scatter observations of mid-latitude sporadic E and further comments for improved data analysis
[INPE-2247-PRE/031] N82-17422

RADAR ANTENNAS

A stepped-frequency HF radar for ionospheric diagnostics
[AD-A107810] N82-17718

RADAR APPROACH CONTROL

Survey of 101 US airports for new multiple instrument approach concepts --- runways
[AD-A107812] N82-17229

RADAR BEACONS

Active beacon collision avoidance logic evaluation. Volume 2: Collision avoidance (BCAS) threat phase
[AD-A107808] N82-17148

RADAR ECHOES

Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

RADAR MEASUREMENT

Multiple Doppler radar analysis of severe thunderstorms: Designing a general analysis system
[PB82-114117] N82-17794

Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] N82-17802

RADAR TRACKING

Multiple Doppler radar analysis of severe thunderstorms: Designing a general analysis system
[PB82-114117] N82-17794

RADIAL VELOCITY

A spectroscopic study of the radial velocity variations and accretion disks found in four dwarf novae
N82-18092

RADIANCE

Regional properties of angular reflectance models
N82-17599

RADIATION DOSAGE

Total-dose radiation effects data for semiconductor devices, volume 2
[NASA-CR-168428] N82-17254

RADIATION EFFECTS

Total-dose radiation effects data for semiconductor devices, volume 2
[NASA-CR-168428] N82-17254

Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites
[NASA-CR-168421] N82-17267

USSR report: Life sciences effects of nonionizing electromagnetic radiation, no. 4
[JPRS-79780] N82-17844

Study of defects produced by the growth, post treatment and fabrication of quartz
[AD-A107771] N82-18048

RADIATIVE LIFETIME

Experimental investigations of gas transport systems
[MPIS-30/1980] N82-17466

RADIATIVE TRANSFER

The Potential Atmospheric Impact of Chemicals Released to the Environment: Proceedings of four workshops
[PB82-119447] N82-17686

Measurement of visible radiation transfer in water under laboratory and field conditions
[PB82-108481] N82-18004

RADII

The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113

RADIO ANTENNAS

Preliminary Centaur systems analysis
[NASA-CR-167499] N82-17424

RADIO ASTRONOMY

Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83881] N82-18106

RADIO BEACONS

Investigation of Wilcox model 585B very high frequency omnidirectional radio range (VOR) system, part 3
[AD-A107855] N82-17149

RADIO ECHOES

Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results
N82-17735

RADIO EQUIPMENT

Defense of radio-electronic equipment
[AD-A108114] N82-17430

RADIO FREQUENCIES

Current problems of radiobiology of electromagnetic radiation of radio-frequency range N82-17850

RADIO FREQUENCY HEATING

Microwave plasma source for neutral-beam injection systems
[DE81-029122] N82-18020

RADIO RECEIVERS

Commutated automatic gain control system
[NASA-CR-168440] N82-17140

A prototype interface unit for microprocessor-based loran-C receiver
[NASA-CR-168441] N82-17141

RADIO SCATTERING

The distribution of free electrons in the inner galaxy from pulsar dispersion measures
[NASA-TM-83875] N82-18096

RADIO TELESCOPES

Institute director discusses KRT-10 and other space antennas N82-17240

RADIOACTIVE MATERIALS

Neutron activation analysis of nuclides from stellar and man-induced nuclear reactions N82-17973

RADIOACTIVE WASTES

Recent injections of nuclear debris in the atmosphere N82-17974

RADIOBIOLOGY

Current problems of radiobiology of electromagnetic radiation of radio-frequency range N82-17850

RADIOISOTOPE BATTERIES

Development of W-Ta generator
[NASA-CR-167477] N82-17300

RADIOMETERS

Calibration of pyroelectric radiometers for infrared flare measurements
[AD-A107648] N82-17481

Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104

RADON ISOTOPES

Anomalous radon (222) emission and its association with earthquakes and tectonism N82-17739

RAIN

The significance of tropical cyclone rainfall in the water supply of south Florida N82-17547

Climate, climate data, and water resources
N82-17758

Climate applications to agricultural problems
N82-17759

The nature of drought and strategies to reduce its effects N82-17770

Further studies on the climatic change during historical times in China N82-17776

RAIN GAGES

Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772

RAMAN SPECTRA

Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281

RAMAN SPECTROSCOPY

Broad-band rotational cars thermometry in nitrogen gas N82-17451

RANDOM SAMPLING

Hypothesis testing in contingency tables with small samples N82-17946

RANDOM SIGNALS

Two estimation methods for nonstationary spectra
[ENST-D-81006] N82-17926

RANGE (EXTREMES)

Reflections on aircraft unmask ranges
[AD-A107953] N82-17948

RANGE AND RANGE RATE TRACKING

Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500

RAPID TRANSIT SYSTEMS

Initial interface standards for rapid transit car subsystem components
[PB82-104704] N82-18074

RARE GASES
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054

RATIONAL FUNCTIONS
Two theorems on the decomposition of a para-unitary function into a sum of terms with uniform argument
[INPE-2217-PRE/015] N82-17905
F-purity and rational singularity N82-17936

RATIOS
Quasi-Newton methods converge at the golden section rate
[AD-A106683] N82-17901

REACTION KINETICS
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
An automated reagent preparation system for fast reaction-rate analyses N82-17273
Picosecond studies of solvent-solute interactions N82-17290
Unimolecular isomerization dynamics and instabilities: RRKM theory N82-17291
Effects of preignition on pulverized-coal combustion
[DE82-002565] N82-17313
Investigations of elementary reactions of the NHZ radical with a chemical radical source
[MPIS-2/1981] N82-17319
Mechanistic studies on the extraction of copper(11) by hydrophobic reagents N82-17327
Investigation of oxide bound transition metal complexes N82-17334
Experimental investigations of gas transport systems
[MPIS-30/1980] N82-17468
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor --- Entrainment Stretching Coherence Interdiffusion Moving Observer (ESCIMO)
[HTS/79/14] N82-17470
Kinetic processes in high pressure gases: Excited state collisions
[AD-A108128] N82-17490

REACTION WHEELS
Magnetic bearing reaction wheel tests --- performed on a three-axis air bearing simulator
[ESA-TT-699] N82-17511

REACTOR MATERIALS
Dynamic elastic-plastic characterization of nuclear pressure vessel material
[CISE-1693] N82-17528
Mathematical models in nuclear-reactor thermal hydraulics
[HTS/81/3] N82-17994

REACTOR SAFETY
Mechanical Engineering Department technical review
[DE82-000303] N82-17509
Load capacity of notched components as derived from post-yield fracture criteria --- for failure analysis of reactor components
[ISD-286] N82-17538
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] N82-17722

REAL TIME OPERATION
The traffic flow in a distributed real time computing system (RDC-SYSTEM) with a fiber-optic ringbus system N82-17112
State-of-the-art computer monitoring equipment N82-17116
Toward global monitoring of the ionosphere in real time by a modern ionosonde network: The geophysical requirements and technological opportunity
[PB82-106444] N82-17723

RECEIVERS
A digital field strength measuring receiver for l. f. and m. f.
[BBC-RD-1981/7] N82-17474

RECLAMATION
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] N82-17594
Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596

RECOMBINATION REACTIONS
Kinetic processes in high pressure gases: Excited state collisions
[AD-A108128] N82-17490

RECURSIVE FUNCTIONS
Two papers on recursive evaluation of compound distributions
[AD-A107912] N82-17914

REDOX CELLS
Electrochemical investigation of solvent effects on the electrode kinetics and thermodynamics of some transition-metal redox couples N82-17284

REDUCTION (CHEMISTRY)
One-electron mechanisms in organometallic chemistry N82-17262
The electrochemical and spectrophotometric determination of free and combined chlorine N82-17292
Develop solar fuels and chemicals technology and perform supporting systems analysis
[DE81-023960] N82-17318
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17684

REDUNDANCY
Stage-state reliability analysis technique N82-17104
Reconfiguration: A method to improve systems realiability N82-17107

REFINING
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402
Initial assessment of selected advanced lubricating oil filters
[DE82-002420] N82-17506

REFLECTANCE
Cavity lifetime phase-shift method for sensitive reflectance measurements at mid-infrared wavelengths
[ATR-82(8446)-1] N82-17423
SPAR reference manual update SPAR level 15
[NASA-CR-161967] N82-17520
Regional properties of angular reflectance models N82-17599
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104

REFRACTED WAVES
An optical model for the microwave properties of sea ice
[NASA-TM-83865] N82-17561

REFRACTION
An application of ray theory to the investigation of seismic head wave post-Pn phases N82-17736

REFUELING
Electric vehicle refuelling infrastructure
[ERG-038] N82-18073

REGENERATION (ENGINEERING)
Regenerative helicopter engines: Advances in performance and expected development problems N82-17212

REGENERATIVE FUEL CELLS
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] N82-17607

REGIONAL PLANNING
Before the well runs dry: A handbook on drought management
[PB82-105818] N82-17579
Before the well runs dry: A handbook for designing a local water conservation plan
[PB82-105826] N82-17580
Cumberland River Basin; regional water and land resources plan
[PB82-111501] N82-17585
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] N82-17631
Procedures for preparing regional transportation management plans --- oil and gas pipelines from outer continental shelves
[PB82-106162] N82-18075
Urban decentralization and the role of public transportation
[PB82-114844] N82-18079
Urban decentralization and the role of public transportation. Executive summary
[PB82-114836] N82-18080

REGRESSION ANALYSIS
An isotonic regression algorithm
[AD-A107620] N82-17886
Proportional hazards model with time-dependent covariates: Large sample theory and related topics N82-17945

REGULATIONS
Example emission inventory documentation for 1982 ozone State Implementation Plans (SIPs)
[PB82-101908] N82-17677

REINFORCEMENT (STRUCTURES)
Analysis of multiple load path panels containing impact damage N82-17170

RELATIVISTIC PARTICLES
Probabilistic treatment of relativistic scattering of scalar particles and their mass spectrum N82-17993

RELAXATION (MECHANICS)
Photon echo modulation in LaF3:Pr3+ --- praseodymium doped lanthanum trifluoride N82-17995

RELEASING
Rocket-borne instrumentation for the measurement of atomic oxygen based on chemical release in the lower thermosphere
[AERONOMICA-ACTA-A-231-1981] N82-17257

RELIABILITY
Multicomponent continuous flow kinetic analysis N82-17280
Comparison between reliability, sensitivity and accuracy of nondestructive inspection methods
[NLR-MP-81009-U] N82-17515
Statistical aspects of reliability, maintainability and availability
[AD-A107618] N82-17517
Performance of activated sludge processes: Reliability, stability and variability
[PB82-109604] N82-17689
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] N82-18066

RELIABILITY ANALYSIS
Stage-state reliability analysis technique N82-17104
Methodology for measurement of fault latency in a digital avionic miniprocessor N82-17105
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106
Reconfiguration: A method to improve systems realiability N82-17107
A measure of effectiveness: Analysis and application --- information completion measure for communication networks
[AD-A107886] N82-17434

RELIABILITY ENGINEERING
Evaluation of a pyrotechnic actuator concept by means of the probit statistical method. Justification of the choice of this method; application; examples of application
[ESA-TT-694] N82-17403

REMOTE SENSING
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] N82-17562
The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746
Publications and reports on contracts and grants, 1980
[PB82-103219] N82-17792
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17798
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104

RESEARCH
Material properties to minimize distress in zero-maintenance pavements. Volume 1: Models
[PB82-112905] N82-17414
Material properties to minimize distress in zero-maintenance pavements. Volume 2: Parameter study
[PB82-112913] N82-17415
Report of the second session of the Joint Scientific Committee N82-17720

RESEARCH AIRCRAFT
Preliminary design study of a hybrid airship for flight research
[NASA-CR-166246] N82-17152

RESEARCH AND DEVELOPMENT
NASA's University Program: Active projects, fiscal year 1981
[NASA-TM-84416] N82-18055
ONR Tokyo scientific bulletin. Volume 6: Number 3, July to September 1981
[AD-A107649] N82-18118

RESERVOIRS
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] N82-17576
Water quality simulation in Wahiawa reservoir, O'Ahu, Hawaii
[PB82-108499] N82-17588

RESIDENTIAL ENERGY
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001066] N82-17406
Solarization/conservation technology development for existing housing
[DE82-002175] N82-17407
Climatic influences of residential energy consumption N82-17742

RESIN MATRIX COMPOSITES
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites
[NASA-CR-168421] N82-17267
Fatigue behavior of fiber-resin composites
[MIT-RR-R81-2] N82-17269

RESONANT FREQUENCIES
Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281
A 10kW series resonant converter design, translator characterization, and base-drive optimization
[NASA-CR-165546] N82-17439
Experimental correlation and self consistent analysis of an IR, FIR, MW triple resonant system in ammonia N82-17996
Quantum beats in photoionization current N82-18031

RESOURCE ALLOCATION
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000638] N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000639] N82-17631

RESOURCES MANAGEMENT
A method of evaluating landform classification systems for renewable resource assessment and planning N82-17549
Water for non-nuclear energy development in the Great Basin
[PB82-116781] N82-17581
Sea grant maritime heritage series: The bight of the big apple
[PB82-119439] N82-17685
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109610] N82-17690
Effect of climate on the development of natural resources in Asia N82-17782

RESPIRATORY SYSTEM
Respiratory toxicology, 1981
[AD-A107672] N82-17841

RESPONSES
Impulse response determination in the time domain
[AD-A107626] N82-17431

REUSABLE SPACECRAFT
Economy of small reusable LEO satellite platforms
[MBB-UR-496-81-O] N82-17247

REVERBERATION
The reverberation and absorption characteristics of a water-filled chamber with and without a pressure-release wall lining
[AD-A107676] N82-17960

REVERSE FIELD PINCH
Rotational instabilities in the field-reversed theta pinch: Results of hybrid simulations
[AD-A107651] N82-18015
Resistive interchange modes in reversed field pinches
[AD-A108129] N82-18019

REYNOLDS NUMBER
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190
Survey on the effect of blade surface roughness on compressor performance N82-17191

RHEOLOGY
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] N82-17455
Cone penetrometer and liquid limit
[PB82-113507] N82-17724

RHYTHM (BIOLOGY)
Cerebral hemispheric activity and automonic nervous function N82-17866

RIBS (SUPPORTS)
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353

RIDING QUALITY
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871

RIEMANN MANIFOLD
Riemannian fibrations of Euclidean spaces N82-17903

RIGID ROTORS
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641

RIGID STRUCTURES
Distribution theoretic methods for dynamic analysis and optimization of mechanisms with intermittent motion
[AD-A108021] N82-17532

RIVER BASINS
Cumberland River Basin; regional water and land resources plan
[PB82-111501] N82-17585
Connecticut Coastal River basins overview: Public review draft
[PB82-105925] N82-17590
Impact of Canadian power plant development and flow apportionment on the Poplar River Basin
[PB82-111618] N82-17681

RIVERS
Simulation of ice-cover growth and thermal decay on the upper St. Lawrence River N82-17550
Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114206] N82-17582
Connecticut Coastal River basins overview: Public review draft
[PB82-105925] N82-17590
Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774

ROADS
Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410
Assessment and control of chrysotile asbestos emissions from unpaved roads
[PB82-102526] N82-17411

ROBUSTNESS (MATHEMATICS)
Robust principal components and dispersion matrices via projection pursuit
[AD-A107627] N82-17909
Projection pursuit
[AD-A107617] N82-17910
Smoothing and coarse grid approximation properties of multigrid methods
[MC-NW-110/81] N82-17918

ROCK INTRUSIONS
Petrology of the ultramafic xenoliths on the Koolau shield, Oahu, Hawaii. Part 1: Liquidus phase relations on the join anorthite-forsterite-silica at 10 kbar, part 2 N82-17727

ROCK MECHANICS
A seismic study on cracks in crystalline rock
[FOA-C-20417-E1] N82-17716

ROCKET ENGINES
SLD reaction control and propulsion system. Preliminary design study
[AD-A107560] N82-17261

ROCKET NOSE CONES
PATCHES-3. User's guide for involute composites
[AD-A107750] N82-17260

ROCKET NOZZLES
PATCHES-3. User's guide for involute composites
[AD-A107750] N82-17260

ROCKET-BORNE INSTRUMENTS
Rocket-borne instrumentation for the measurement of atomic oxygen based on chemical release in the lower thermosphere
[AERONOMICA-ACTA-A-231-1981] N82-17257

ROCKS
Depositional environments of the subsurface Cretaceous deposits of southeastern North Carolina N82-17701
Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733

ROLLING CONTACT LOADS
Rolling resistance measurements 106 passenger car tires
[PB82-116625] N82-17512

ROOM TEMPERATURE
A new class of room temperature molten salts for battery applications
[AD-A107989] N82-17627

ROOTS OF EQUATIONS
Complex root-finding program with application to the dispersion relation of waves propagating in a fluid loaded plate
[AD-A107631] N82-17907
Rigorous high speed separation of zeros of Riemann's zeta function
[MC-NW-113/81] N82-17921

ROTARY STABILITY
Correlating measured and predicted inplane stability characteristics for an advanced bearingless rotor
[NASA-CR-166280] N82-17154

ROTARY WINGS
Blade planform for a quiet helicopter
[NASA-CR-166256] N82-17121
Roll up model for rotor wake vortices, part 5
[ASRL-TR-194-4] N82-17127
Development of a computer based presentation of non-steady helicopter rotor flows
[AD-A108107] N82-17131
Rotor flow research in low speed helicopter flight
[AD-A107673] N82-17132
Non-steady velocity measurement of the wake of a helicopter rotor at low advance ratios
[AD-A107722] N82-17133

ROTATING DISKS
Production engineering and marketing analysis of the rotating disk evaporator
[PB82-101676] N82-17676

ROTATING PLASMAS
Rotational instabilities in the field-reversed theta pinch: Results of hybrid simulations
[AD-A107651] N82-18015

ROTATING STALLS
Axial compressor stall and surge N82-17194

ROTOR AERODYNAMICS
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] N82-17642

ROTOR BLADES (TURBOMACHINERY)
Part span damper loss prediction for transonic axial fan rotors N82-17192
Deviation/turning angle correlations N82-17193
Stress analysis and test philosophy for wind energy converter blades
[NBB-UD-300-80-O] N82-17536

Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] N82-17639
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] N82-17643

ROTOR SPEED
Problems of engine response during transient maneuvers N82-17221

ROTORCRAFT AIRCRAFT
Assessment of historical and projected segments of US and World civil and military rotorcraft markets 1960 - 1990
[NASA-CR-166151] N82-17137
Preliminary design study of a hybrid airship for flight research
[NASA-CR-166246] N82-17152

ROTORS
Rotor model for the verification of computational methods
[ISD-275] N82-17638
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] N82-17643

ROUTES
Routing in networks
[AD-A107641] N82-17895

RUBBER
Low temperature behavior of epoxy-rubber particulate composites
[PB82-113499] N82-17388

RULES
Another proof for the completeness of a rule for the fair termination of guarded commands and another rule for their just termination
[MC-IW-176/81] N82-17922

RUNGE-KUTTA METHOD
On the contractivity of a complex Runge-Kutta scheme
[MC-NW-112/81] N82-17920

RUNWAYS
Requirements for instrument approaches to converging runways
[AD-A108075] N82-17144
Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151
Survey of 101 US airports for new multiple instrument approach concepts — runways
[AD-A107812] N82-17229

S

SAFETY
Safety design considerations for lithium batteries in CF applications
[AD-A107619] N82-17626

SAFETY MANAGEMENT
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553
Study of air compressor hazards in underground and surface mines
[PB82-105164] N82-17597
A hazardous materials spill warning system
[PB82-108424] N82-17665
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108895] N82-17667

SALYUT SPACE STATION
Status of space biomedical programs N82-17239

SAMPLERS
Development and evaluation of an ambient viable microbial air sampler
[PB82-113689] N82-17488

SAMPLING
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317
Accelerated convergence in the simulation of countably infinite state Markov chains
[AD-A107869] N82-17943

SANDS
Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408

SANDSTONES
Deposition and diagenesis of Glauconite Sandstone, Berrymore-Lobstick-Bigoray area, South Central Alberta: A study of physical chemistry of cementation N82-17703

SATELLITE CONTROL
Human-machine interface issues in the Multisatellite Operations Control Center-1 (MSOCC-1)
[NASA-TM-83826] N82-17575

SATELLITE LIFETIME
A rapid estimation of the lifetime of near Earth satellites for mission analysis
[INPE-2158-RPE/377] N82-17246

SATELLITE NAVIGATION SYSTEMS
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] N82-17566

SATELLITE OBSERVATION
Commentary on Soviet-French Aureole-3 satellite N82-17236
Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] N82-17708
Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch
[NASA-TM-83868] N82-17714
The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746
Publications and reports on contracts and grants, 1980
[PB82-103219] N82-17792

SATELLITE ORBITS
METEOSAT-2: TO/NSO phase operations N82-17234
Kalman filter satellite orbit improvement using laser ranging measurements from a single tracking station
[VTH-M-414] N82-17501

SATELLITE SOUNDING
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699

SATELLITE TELEVISION
The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] N82-17746

SATELLITE TRACKING
Kalman filter satellite orbit improvement using laser ranging measurements from a single tracking station
[VTH-M-414] N82-17501

SATELLITES
USSR report: Space, no. 14
[JPRS-79711] N82-17235
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064

SCALE EFFECT
Model size and humidity effects on selected calibration parameters for the 16-ft transonic wind tunnel at AEDC
[AD-A107728] N82-17230

SCALE MODELS
Scale-model studies for the improvement of flow patterns of a low-speed tunnel
[NASA-CR-169413] N82-17228
Model size and humidity effects on selected calibration parameters for the 16-ft transonic wind tunnel at AEDC
[AD-A107728] N82-17230
Rotor model for the verification of computational methods
[ISD-275] N82-17638

SCATTER PROPAGATION
On L sub p-decay and scattering for nonlinear Klein-Gordon equations
[CTH-MATH-1981-17] N82-17929

SCATTERING
A space-time study of double scattering in hadron deuteron collisions N82-17985
Probabilistic treatment of relativistic scattering of scalar particles and their mass spectrum N82-17993

SCATTERING COEFFICIENTS
Antenna direction-finding characteristic
[AD-A108110] N82-17429
Beam broadening in dense scattering media — laser irradiation of biological tissue
[MBB-UA-583-81-O] N82-18002

SCATTERING CROSS SECTIONS
A model for hadronic inclusive cross-sections
[PB82-115206] N82-17983
Elastic and inelastic scattering of 800 MeV/c K+/- mesons from carbon-12 and calcium-40 N82-17991
Recommended values of transport cross sections for elastic collision and total collision cross section of electrons in atomic and molecular gases
[IPPJ-AM-19] N82-18007

SCATTEROMETERS
Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] N82-17802

SCENE ANALYSIS
Terrain model animation
[AD-A107911] N82-17887

SCHEDULING
CQNA: Closed queueing network analyzer
[FUB-48-1980] N82-17900

SCRUBBERS
Development and evaluation of an ambient viable microbial air sampler
[PB82-113689] N82-17488

SEA BREEZE
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan N82-17783

SEA ICE
An optical model for the microwave properties of sea ice
[NASA-TM-83865] N82-17561
Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] N82-17563
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] N82-17566
Sea-ice formation services in the world
[WMO-574] N82-17578
Sensitivity of a climatologically-driven sea ice model to the ocean heat flux
[NASA-TM-83877] N82-17799

SEA LEVEL
Great Lakes water levels, 1980. Daily and monthly average water surface elevations
[PB82-107606] N82-17589
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

SEA ROUGHNESS
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17798
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

SEA STATES
Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] N82-17802
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

SEA WATER
Corrosion fatigue of offshore and ship-building steels N82-17346
US Naval fleet aircraft corrosion N82-17350
Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353

SEALERS
US Naval fleet aircraft corrosion N82-17350

SEALING
The experience of corrosion on French military aerodynes N82-17355
The application of mechanical clamps to Portsmouth connectors
[AD-A107632] N82-17505

SEARCH PROFILES
Training of information specialists
[PB82-103227] N82-18063

SEASAT SATELLITES
Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500

SECONDARY FLOW
End-wall boundary layer calculation methods N82-17188
Correlation for secondary flows and clearance effects N82-17189
The coherent structure of turbulent mixing layers. 1: Similarity of the primary vortex structure. 2: Secondary streamwise vortex structure [AD-A106049] N82-17465

SEDIMENTARY ROCKS
Global tectonic control of secular variations in phanerozoic sedimentary rock/ocean/atmosphere chemistry N82-17545
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State [DE82-000913] N82-17573

SEDIMENTS
Dredging management: Data and analysis for the New England/Long Island Sound region [PB82-111626] N82-17412
Investigation of petroleum in the marine environs of the Strait of Juan de Fuca and Northern Puget Sound, part 2 (second-year continuation) [PB82-104290] N82-17662
Pilot field studies of FGD waste disposal at Louisville Gas and Electric [PB82-105479] N82-17672
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations N82-17732

SEISMIC ENERGY
Seismic study of the Bangui anomaly N82-17559

SEISMIC WAVES
A project to test for shale gas in Ohio [DE82-000916] N82-17572
A seismic study on cracks in crystalline rock [FOA-C-20417-E1] N82-17716
An application of ray theory to the investigation of seismic head wave post-Pn phases N82-17736

SEISMOGRAPHS
Seismic study of the crust and upper mantle of the R.C.A. N82-17558
Detection, location and identification of explosions and earthquakes using regional seismic data recorded at a single station [AD-A107587] N82-17719

SEISMOLOGY
A project to test for shale gas in Ohio [DE82-000916] N82-17572
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation [FOA-C-20427-T1] N82-17722
The seismicity of forearc marginal wedges (accretionary prisms) and seismotectonics of convergent margins N82-17726
Anomalous radon (222) emission and its association with earthquakes and tectonism N82-17739
ONR Tokyo scientific bulletin. Volume 6: Number 3, July to September 1981 [AD-A107649] N82-18116

SELECTION
DOE's alcohol fuels awards process resulted in questionable award selections and limited small business success [AD-A106665] N82-17392

SELECTIVE DISSEMINATION OF INFORMATION
Solar-cell project [DE82-901191] N82-17628

SELENIDES
Energy bands and superlattice formation in titanium diselenide N82-18035

SELF LUBRICATING MATERIALS
Performance of PTFE-lined composite journal bearings [NASA-TM-82779] N82-17263

SEMANTICS
An operational semantics for bonded nondeterminism equivalent to a denotational one [MC-IW-169/81] N82-17953

SEMICONDUCTING FILMS
Optical characterization of thin metallic and semiconducting films in the far infrared --- pumpd infrared lasers N82-18037

SEMICONDUCTOR DEVICES
High frequency semiconductor testing [DE82-000926] N82-17445

SEMICONDUCTOR JUNCTIONS
Moderate temperature detector development [NASA-CR-167504] N82-17996

SEMICONDUCTORS (MATERIALS)
Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17282
Luminescent photoelectrochemical cells. 6: Spatial aspects of the photoluminescence and of cadmium selenide electrodes [AD-A107580] N82-17310
Luminescent photoelectrochemical cells. 7: Photoluminescent and electroluminescent properties of cadmium sulfo-selenide electrodes [AD-A107581] N82-17311
A model for electrons existing in hybridized narrow and wide bands [INPE-2127-RPE/351] N82-18042

SENSITIVITY
Development of high sensitivity X-ray and electron-beam resist processes [AD-A107833] N82-17374
Comparison between reliability, sensitivity and accuracy of nondestructive inspection methods [NLR-MP-81009-U] N82-17515
Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults N82-17857

SENSITIZING
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions [VTT-88] N82-17340

SENSORIMOTOR PERFORMANCE
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

SEPARATED FLOW
Experimental investigations of gas transport systems [MPIS-30/1980] N82-17468

SEPARATION
Separation of gas mixtures by selective extraction [PB82-103839] N82-17324

SEQUENTIAL ANALYSIS
P-values for multi-stage and sequential tests [AD-A108127] N82-17942

SERVICE LIFE
Groove depth requirements for tine-textured rigid pavement 5: Durability of tine texturing on PCC pavements [PB82-104951] N82-17413
Effects of arc current on the life in burner rig thermal cycling of plasma sprayed ZrOsub2-Ysub2Osub3 [NASA-TM-82795] N82-17453

SERVICES
Technology transfer and the management of human services [PB82-105644] N82-18077

SET THEORY
Stage-state reliability analysis technique N82-17104
On compositions of multisets N82-17949

SEWAGE
Revegetating strip-mined land with municipal sewage sludge [PB82-102484] N82-17594
Feasibility of commercialized water treatment techniques for concentrated waste spills [PB82-108440] N82-17666

SEWAGE TREATMENT
Evaluation of a treatment lagoon for combined sever overflow [PB82-105214] N82-17671
Demonstration physical chemical sewage treatment plant utilizing biological nitrification [PB82-101643] N82-17675
Performance of activated sludge processes: Reliability, stability and variability [PB82-109604] N82-17689

SEWERS
Evaluation of a treatment lagoon for combined sever overflow [PB82-105214] N82-17671

SHADOWGRAPH PHOTOGRAPHY
Hypervelocity impact instrumentation development [AD-A107852] N82-17484

SHALE OIL
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy N82-17286
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [DE81-030849] N82-17402
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State [DE82-000913] N82-17573

SHALES
A project to test for shale gas in Ohio [DE82-000916] N82-17572
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State [DE82-000913] N82-17573
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff [PB82-109810] N82-17690

SHAPED CHARGES
Analysis methods for predicting structural response to projectile impact N82-17162

SHAPES
Magnetohydrodynamic stability of structurally stable toroidal plasmas N82-18029

SHEAR LAYERS
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190

SHEAR PROPERTIES
Underwater flow visualization methods in the upper layer of the ocean [AD-A107919] N82-17801

SHEAR STRENGTH
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles [NASA-CR-159115] N82-17519

SHEARING
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner [NASA-CR-161962] N82-17554

SHEARS
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner [NASA-CR-161962] N82-17554

SHELL STABILITY
Past, present and future of shell stability analysis [VTH-LR-320] N82-17537

SHELL THEORY
Past, present and future of shell stability analysis [VTH-LR-320] N82-17537

SHIELDING
Shielded balanced and coaxial transmission lines. Parametric measurements and instrumentation relevant to signal waveform transmission in digital service [PB82-105297] N82-17438

SHIPS
Corrosion fatigue of offshore and ship-building steels N82-17346

SHOCK FRONTS
Three-dimensional shape and position of Venus's bow shock [REPT-656] N82-18102

SHOCK LAYERS
Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187

SHOCK LOADS
Development of sensitized pick coal interface detector system [NASA-CR-161961] N82-17560

SHOCK MEASURING INSTRUMENTS
Development of sensitized pick coal interface detector system [NASA-CR-161961] N82-17560

SHOCK RESISTANCE
Mechanical shock test analysis [DE82-000932] N82-17534

SHOCK WAVES
An investigation of the high rate volumetric properties of snow [AD-A108032] N82-17569
Extended adiabatic blast waves and a model of the soft X-ray background --- interstellar matter [NASA-CR-168411] N82-18095
Interactions of comets with the solar wind and solar radiation N82-18103

SHORELINES

Rates and implications of bluff recession along the Lake Michigan shorezone of Michigan and Wisconsin N82-17548

SHORT TAKEOFF AIRCRAFT

Surveys of flow-field around empennage of the NAL STOL-research-aircraft model [NAL-TR-677] N82-17124

A velocity vector measuring system with 13 asymmetric wedge type yawmeters --- measuring flow distribution around the empennage of STOL models [NAL-TR-674] N82-17477

SHRAPNEL

Strength degradation of impact damaged structure N82-17169

SIDE-LOOKING RADAR

The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses [NASA-CR-168444] N82-17798

SIDELOBES

Antenna direction-finding characteristic [AD-A108110] N82-17429

SIGNAL ANALYSIS

Sea state measurement with a two frequency scatterometer (theory) [ESA-TT-710] N82-17802

SIGNAL ENCODING

A study of high density bit transition requirements versus the effects on BCH error correcting coding [NASA-CR-161957] N82-17884

SIGNAL PROCESSING

Signal processing with systolic arrays N82-17096

Impulse response determination in the time domain [AD-A107828] N82-17431

Impedance matching for long cables carrying ultrasonic signals [AD-A107935] N82-17444

Toward global monitoring of the ionosphere in real time by a modern ionosonde network: The geophysical requirements and technological opportunity [PB82-106444] N82-17723

Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection [PB82-113283] N82-17805

Rational modeling by pencil-of-function method [AD-A107741] N82-17912

SIGNAL REFLECTION

Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results N82-17735

SIGNAL TRANSMISSION

Multiple-access channels with different generalized feedback signals [INPE-2221-PRE/017] N82-17421

Amplitude density distribution of a sum of speech signals [IND-FB-106] N82-17437

Shielded balanced and coaxial transmission lines. Parametric measurements and instrumentation relevant to signal waveform transmission in digital service [PB82-105297] N82-17438

SILANES

Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17282

SILICATES

Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695

SILICON

Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

Harmonic and anharmonic properties of diamond structure crystals with application to the calculation of the thermal expansion of silicon [NASA-CR-168437] N82-18041

SILICON CARBIDES

Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature [NAL-TR-678] N82-17368

Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity [AD-A107617] N82-17371

SILICON COMPOUNDS

Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation N82-17297

Solar-cell project [DE82-901191] N82-17628

The Fermi surface reconstructed momentum density of V3Si from positron annihilation experiments N82-18039

SILICON FILMS

Results of the 1981 NASA/JPL balloon flight solar cell calibration program [NASA-CR-168442] N82-17610

The 18th Project Integration Meeting [NASA-CR-168431] N82-17614

SILICON NITRIDES

Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature [NAL-TR-678] N82-17368

Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity [AD-A107617] N82-17371

SILICONES

US Naval fleet aircraft corrosion N82-17350

Sensitivity analysis of the add-on price estimate for the silicon web growth process [NASA-CR-168422] N82-17611

SILVER

Resonance Raman spectroelectrochemistry of the tetracyanoquinodimethane dianion, part 1. Double potential step chronocoulometry studies of absorption on a silver electrode, part 2 N82-17281

SIMPLEX METHOD

A simple heuristic approach to simplex efficiency [AD-A107913] N82-17915

SIMULATION

Water quality simulation in Wahiawa reservoir, O'Ahu, Hawaii [PB82-106499] N82-17588

Accelerated convergence in the simulation of countably infinite state Markov chains [AD-A107869] N82-17943

SINGLE-PHASE FLOW

A general purpose computer program for multidimensional one and two phase flow [NTS/81/11] N82-17458

SINGULARITY (MATHEMATICS)

F-purity and rational singularity N82-17936

SITE SELECTION

Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis [DE82-000030] N82-17397

Thermally-induced ventilation applications in atria: A state-of-the-art report [DE82-001086] N82-17406

Reflections on aircraft unmask ranges [AD-A107953] N82-17948

SITES

Defense of radio-electronic equipment [AD-A108114] N82-17430

SIZE DETERMINATION

Electron temperature evolution and macroscopic size of a vacuum spark discharge plasma N82-18028

SKIDDING

Groove depth requirements for tine-textured rigid pavement 5: Durability of tine texturing on PCC pavements [PB82-104951] N82-17413

SKIN TEMPERATURE (NON-BIOLOGICAL)

NASA/Rockwell International Space Shuttle orbiter yaw heating test (OH-109) [AD-A107703] N82-17251

SLUDGE

Revegetating strip-mined land with municipal sewage sludge [PB82-102484] N82-17594

Solid waste data: A compilation of statistics on solid waste management within the United States [PB82-107301] N82-17688

SLURRIES

Transport characteristics of alternate slurry fuels [DE82-003019] N82-17394

Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace [BMFT-FB-T-81-221] N82-17455

Fluid flow and gas dispersion in stirred tank reactors N82-17457

SMOG

Modeling of SO2 oxidation in smog [PB82-101932] N82-17323

Sulfur balance in outdoor smog chambers and resulting implications for sulfur dioxide photooxidation studies N82-17651

SMOKE ABATEMENT

Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1: Construction of apparatus and preliminary experiments [AD-A108018] N82-17305

SNOW

An investigation of the high rate volumetric properties of snow [AD-A108032] N82-17569

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm N82-17601

SOCIAL FACTORS

Psycho-social aspects of productivity in underground coal mining [NASA-CR-168429] N82-17551

The World Climate Program N82-17748

Study of climate and its applied aspects N82-17766

Climatic change and social disturbance N82-17773

The impacts of climatic change on human society N82-17781

Improving the science of climate impact study N82-17783

SODIUM CHLORIDES

Zero-gravity growth of a sodium chloride-lithium fluoride eutectic mixture [NASA-CR-161966] N82-17299

Briquetting of fine coal using a sodium chloride binder [DE82-000632] N82-17395

SODIUM COMPOUNDS

Defect structure in the alkali-gallate fast ion conductors N82-18033

SOIL EROSION

Rates and implications of bluff recession along the Lake Michigan shorezone of Michigan and Wisconsin N82-17548

SOIL MOISTURE

Cone penetrometer and liquid limit [PB82-113507] N82-17724

Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772

SOIL SCIENCE

Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range [DE82-001328] N82-17629

Cone penetrometer and liquid limit [PB82-113507] N82-17724

SOLAR ACTIVITY

The effect of perturbations of convective energy transport on the luminosity and radius of the Sun [NASA-CR-168445] N82-18113

SOLAR CELLS

Design, analysis, and test verification of advanced encapsulation systems --- low cost solar arrays [NASA-CR-168406] N82-17605

Results of the 1981 NASA/JPL balloon flight solar cell calibration program [NASA-CR-168442] N82-17610

DOE-2 verification project, phase 1 [LA-8295-MS] N82-17616

Solar-cell project [DE82-901191] N82-17628

Development of a solar-energy system [DE81-030531] N82-17633

Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation [PB82-106824] N82-17648

Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

SOLAR COOLING
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001086] N82-17406

SOLAR ELECTRIC PROPULSION
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] N82-17648

SOLAR ENERGY
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] N82-17611
The 18th Project Integration Meeting
[NASA-CR-168431] N82-17614
DOE-2 verification project, phase 1
[LA-8295-MS] N82-17616
Solar-cell project
[DE82-901191] N82-17628
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] N82-17645
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] N82-17648
Thermal stratification in storage tanks N82-17649

SOLAR ENERGY CONVERSION
Solarization/conservation technology development for existing housing
[DE82-002175] N82-17407
Meteorological aspects of the utilization of solar radiation as an energy source, part 1
[WMO-557-VOL-1] N82-17644

SOLAR FLARES
Solar X-ray flares: Spectroscopic results from the eighth Orbiting Solar Observatory and the development of a Space Shuttle Borne Polarimeter N82-18109
Solar-geophysical data number 442. Part 2: Comprehensive reports, Data for December 1980, November 1979, miscellanea
[PB82-106337] N82-18114
Solar-geophysical data number 442. Part 2: Prompt reports, Data for May 1981, April 1981 and late data
[PB82-106329] N82-18115

SOLAR GENERATORS
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] N82-17648

SOLAR GRANULATION
Thermal perturbation of the Sun
[NASA-CR-168459] N82-18111

SOLAR HEATING
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001086] N82-17406
Community solar demonstration/dissemination center
[DE82-000994] N82-17632

SOLAR PHYSICS
The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113

SOLAR POWER SATELLITES
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations
[NASA-TM-58233] N82-17609
Solar Power Satellites
[PB82-108846] N82-17647

SOLAR RADIATION
Measurement of visible radiation transfer in water under laboratory and field conditions
[PB82-108481] N82-18004
Interactions of comets with the solar wind and solar radiation N82-18103
Earth-based remote sensing of planetary surfaces and atmospheres at radio wavelengths
[NASA-CR-168414] N82-18104
Evolutionary variations of solar luminosity N82-18112

SOLAR RADIO EMISSION
Solar-geophysical data number 442. Part 2: Comprehensive reports, Data for December 1980, November 1979, miscellanea
[PB82-106337] N82-18114
Solar-geophysical data number 442. Part 2: Prompt reports, Data for May 1981, April 1981 and late data
[PB82-106329] N82-18115

SOLAR WIND
Radial evolution of power spectra of interplanetary Alfvenic turbulence
[IPS-81-13] N82-18097
Interactions of comets with the solar wind and solar radiation N82-18103
Differences between solar wind plasmoids and ideal magnetohydrodynamic filaments
[AERONOMICA-ACTA-A-232-1981] N82-18110
Solar-geophysical data number 442. Part 2: Comprehensive reports, Data for December 1980, November 1979, miscellanea
[PB82-106337] N82-18114
Solar-geophysical data number 442. Part 2: Prompt reports, Data for May 1981, April 1981 and late data
[PB82-106329] N82-18115
Statistical properties of MHD fluctuations associated with high speed streams from HELIOS 2 observations
[IPS-81-5] N82-18117

SOLAR X-RAYS
Solar X-ray flares: Spectroscopic results from the eighth Orbiting Solar Observatory and the development of a Space Shuttle Borne Polarimeter N82-18109

SOLDERING
Solderability improvements for drag soldered PWBs
[DE82-000961] N82-17446

SOLID ELECTRODES
Modeling chemical systems to improve analytical response N82-17283

SOLID SOLUTIONS
Density measurements in gas particle flows
[VKI-TM-32] N82-17471

SOLID STATE DEVICES
Evaluation of control and protection circuits
[PB82-105065] N82-17450

SOLID SURFACES
Surface analysis applied to thin films of molecular solids N82-18040

SOLID WASTES
Solid waste data: A compilation of statistics on solid waste management within the United States
[PB82-107301] N82-17698

SOLID-SOLID INTERFACES
Effects on solid-state reactions during thermal decomposition of nitrocellulose — rocket propellant
[DRIC-T-6460] N82-17390
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555
Development of sensitized pick coal interface detector system
[NASA-CR-161961] N82-17560
Surface analysis applied to thin films of molecular solids N82-18040

SOLITARY WAVES
Two-dimensional interaction of ion-acoustic solitons N82-17969

SOLUBILITY
Detection and mapping of insoluble sinking pollutants
[PB82-105586] N82-17674

SOLUTES
Picosecond studies of solvent-solute interactions N82-17290

SOLUTIONS
Basic research on macromolecular dynamics
[PB82-115502] N82-17389

SOLVATION
Excited-state phenomena associated with solvation site heterogeneity N82-17288
Picosecond studies of solvent-solute interactions N82-17290

SOLVENT EXTRACTION
Determination of volatile organics in industrial and municipal wastewaters
[PB82-119090] N82-17320
Mechanistic studies on the extraction of copper(11) by hydrophobic reagents N82-17327

SOLVENT REFINED COAL
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030649] N82-17402

SOLVENTS
Electrochemical investigation of solvent effects on the electrode kinetics and thermodynamics of some transition-metal redox couples N82-17284
Picosecond studies of solvent-solute interactions N82-17290

SORBENTS
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108895] N82-17667

SORPTION
Separation of gas mixtures by selective extraction
[PB82-103839] N82-17324

SOUND PROPAGATION
A project to test for shale gas in Ohio
[DE82-000916] N82-17572

SOUND WAVES
Forward masking of auditory nerve (N sub 1) and brainstem responses (Wave V) in humans N82-17860
The effect of fabric coverings on the acoustic performance of modular absorbers
[BBC-RD-1981/8] N82-17957
Acoustic detection of high energy particles N82-17966

SOUTH AMERICA
Differential behaviour of the equatorial ionospheres on the eastern and western coasts of the South American continent
[INPE-2237-PRE/024] N82-17710

SOUTHERN HEMISPHERE
High latitude dayside precipitating electron regions during the Southern hemisphere summer and their dependence of IMF and K sub p
[IPS-81-4] N82-17717

SOYUZ SPACECRAFT
Status of space biomedical programs N82-17239

SPACE COMMUNICATION
Solar Power Satellites
[PB82-108846] N82-17647

SPACE ERECTABLE STRUCTURES
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations
[NASA-TM-58233] N82-17609

SPACE FLIGHT FEEDING
Diet of crews of three main expeditions aboard Salyut-6 orbital station N82-17815
Amino acid metabolism during prolonged intake of dehydrated foods and simulation of some space flight factors N82-17816

SPACE FLIGHT STRESS
USSR report: Space biology and aerospace medicine, vol. 15, no. 5, Sep. - Oct. 1981
[JPRS-79346] N82-17812
Effect of space flights of different duration on energy metabolism of human erythrocytes N82-17817
Human lipid metabolism during confinement in pressure chamber N82-17822
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
Blood fibrinogen as related to immersion in water for seven days and short-term space flight N82-17836

SPACE HEATING (BUILDINGS)
Development of an absorption heat pump system operating with primary energy to heat apartment buildings. Dual components mixture R 22-E 181
[BMFT-FB-T-81-206] N82-17454

SPACE MANUFACTURING
Glass shell manufacturing in space
[NASA-CR-161972] N82-17233

SPACE PLATFORMS
Economy of small reusable LEO satellite platforms
[MBB-UR-496-81-O] N82-17247
Control system design for the large space systems technology reference platform
[NASA-CR-168426] N82-17255

SPACE POWER UNIT REACTORS
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] N82-17607

SPACE PROCESSING
Crystal growth from the vapor phase experiment MA-085, section 7
[NASA-CR-161985] N82-18043

Quantitative determination of zero-gravity effects on electronic materials processing germanium crystal growth with simultaneous interface demarcation experiment MA-060, section 5
[NASA-CR-161964] N82-18044

SPACE PROCESSING APPLICATIONS ROCKET
SPAR reference manual update SPAR level 15
[NASA-CR-161967] N82-17520

SPACE PROGRAMS
USSR report: Space, no. 14
[JPRS-79711] N82-17235
Commentary on Soviet-French Aureole-3 satellite N82-17236
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238
Status of space biomedical programs N82-17239
Institute director discusses KRT-10 and other space antennas N82-17240
Advantages of space stations at the Earth-Moon libration points N82-17242

SPACE SHUTTLE ORBITERS
NASA/Rockwell International Space Shuttle orbiter yaw heating test (OH-109)
[AD-A107703] N82-17251

SPACE SHUTTLE PAYLOADS
Economy of small reusable LEO satellite platforms
[MBB-UR-496-81-O] N82-17247
Study on the accommodation potentials of NADIR-oriented payloads on space shuttle
[DFVLR-FB-81-27] N82-17249
Solar X-ray flares: Spectroscopic results from the eighth Orbiting Solar Observatory and the development of a Space Shuttle Borne Polarimeter N82-18109

SPACE SHUTTLE UPPER STAGES
Preliminary Centaur systems analysis
[NASA-CR-167499] N82-17424

SPACE STATIONS
USSR report: Space, no. 14
[JPRS-79711] N82-17235

SPACE TRANSPORTATION SYSTEM
Economy of small reusable LEO satellite platforms
[MBB-UR-496-81-O] N82-17247

SPACE TRANSPORTATION SYSTEM 1 FLIGHT
A comparison of in-cloud HCl concentrations from the NASA/MSFC MDM to measurements for the space shuttle launch
[NASA-CR-167497] N82-17663

SPACE-TIME FUNCTIONS
Space and time resolved measurements of ion energy distributions by neutral beam injection in TORTUR 2 --- toroidal turbulence experiment (TORTUR)
[REPT-81-137] N82-17976
A space-time study of double scattering in hadron deuteron collisions N82-17985
Interacting quantum field theory in curved space-time N82-18052
Electric charge in the Kruskal space-time and the Jeans conjecture
[REPT-683] N82-18091

SPACEBORNE ASTRONOMY
Gamma-ray instrumentation and its uses in space N82-17241

SPACEBORNE EXPERIMENTS
Development status of the 'Adhesion of Metals' experiment and of the UHV Chamber facility
[CISE-1700] N82-17336
Rat amino acid composition after flight aboard Cosmos-1129 biosatellite N82-17831
Myocardial protein fractions and enzymatic activity thereof in experimental rats flown aboard Cosmos-936 biosatellite N82-17832
Metabolic processes in rat skeletal muscles after flight aboard Cosmos-936 N82-17833
Activity of some enzymes of carbohydrate metabolism in rat skeletal muscles after space flight N82-17834
Crystal growth from the vapor phase experiment MA-085, section 7
[NASA-CR-161965] N82-18043
Quantitative determination of zero-gravity effects on electronic materials processing germanium crystal growth with simultaneous interface demarcation experiment MA-060, section 5
[NASA-CR-161964] N82-18044

SPACECRAFT ANTENNAS
Preliminary Centaur systems analysis
[NASA-CR-167499] N82-17424

SPACECRAFT CABIN ATMOSPHERES
Aerosols distribution of microorganisms in a manned pressurized chamber and effect of artificial air ionization N82-17823

SPACECRAFT COMMUNICATION
Satellite applications to electric-utility communications needs --- land mobile satellite service
[NASA-CR-168430] N82-17253

SPACECRAFT DESIGN
Control system design for the large space systems technology reference platform
[NASA-CR-166426] N82-17255
A study of the selection of microcomputer architectures to automate planetary spacecraft power systems
[NASA-CR-166412] N82-17259

SPACECRAFT POWER SUPPLIES
Automated Power Systems Management (APSM)
[NASA-CR-166423] N82-17258
A study of the selection of microcomputer architectures to automate planetary spacecraft power systems
[NASA-CR-166412] N82-17259
Overview study of Space Power Technologies for the advanced energetics program --- spacecraft
[NASA-CR-165269] N82-17606
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-166442] N82-17610

SPACECRAFT PROPULSION
SLD reaction control and propulsion system. Preliminary design study
[AD-A107660] N82-17261
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-166442] N82-17610

SPACELAB
Study on the accommodation potentials of NADIR-oriented payloads on space shuttle
[DFVLR-FB-81-27] N82-17249

SPACELAB PAYLOADS
Crystal growth from the vapor phase experiment MA-085, section 7
[NASA-CR-161965] N82-18043

SPATIAL DISTRIBUTION
Some results of numerical experiments on the computation of the Kootwijk and Wettzell satellite laser ranging station coordinates
[VTH-M-409] N82-17499

SPATIAL RESOLUTION
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] N82-17562

SPECIFICATIONS
Hierarchical specification of the SIFT fault tolerant flight control system N82-17106
Specifications, tolerances, and other technical requirements for weighing and measuring devices, 1982 edition
[PB82-113952] N82-17487

SPECTRAL BANDS
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] N82-17562

SPECTRAL CORRELATION
Two-channel linear-predictive spectral analysis: Program for the HP 9845 desk calculator
[AD-A107634] N82-17569

SPECTRAL LINE WIDTH
Spectral diffusion in orientationally disordered organic solids
[AD-A107950] N82-18050

SPECTRAL RECONNAISSANCE
Watershed model study using LANDSAT data N82-17602

SPECTRAL REFLECTANCE
Spectral reflectances of freshwater ice and snow from 340 through 1100 nm N82-17601

SPECTRAL SIGNATURES
Computational theory of line drawing interpretation
[NASA-CR-165604] N82-17697

SPECTROMETERS
Zeeman background correction with an electrothermal graphite braid atomizer N82-17275

SPECTROPHOTOGRAPHY
A spectroscopic study of the radial velocity variations and accretion disks found in four dwarf novae N82-18092

SPECTROPHOTOMETRY
The electrochemical and spectrophotometric determination of free and combined chlorine N82-17292
Investigation of spectroscopic properties of flames and plasmas via computer controlled instrumentation N82-17326
Two-dimensional photometry of planetary nebulae N82-18083

SPECTROSCOPIC ANALYSIS
Induced luminescence by charged particles on gaseous, liquid and solid argon
[CRN-CPR-80-10] N82-17316
Hypervelocity impact instrumentation development
[AD-A107852] N82-17464
A spectroscopic study of the radial velocity variations and accretion disks found in four dwarf novae N82-18092

SPECTROSCOPY
Applications of nuclear quadrupole double resonance spectroscopy N82-17287

SPECTRUM ANALYSIS
Computerized gamma spectrum analysis with application to multicomponent activation detectors N82-17301
Enhancement of poles in spectral analysis
[AD-A107739] N82-17432
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17566
Two-channel linear-predictive spectral analysis: Program for the HP 9845 desk calculator
[AD-A107634] N82-17569

SPEECH RECOGNITION
Amplitude density distribution of a sum of speech signals
[IND-FB-106] N82-17437

SPHERES
Symmetry and multiple electromagnetic scattering by a cluster of spheres
[AD-A106116] N82-17428

SPHERICAL HARMONICS
Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch
[NASA-TM-83868] N82-17714

SPHERICAL SHELLS
Glass shell manufacturing in space
[NASA-CR-161972] N82-17233
On the shape and orientation control of an orbiting shallow spherical shell structure
[NASA-CR-166420] N82-17243

SPILLING
Modification of spill factors affecting air pollution. Volume 1: An evaluation of cooling as a vapor mitigation procedure for spilled volatile chemicals
[PB82-108362] N82-17657
Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658
Removing water-soluble hazardous material spills from waterways with carbon
[PB82-103813] N82-17661
A hazardous materials spill warning system
[PB82-108424] N82-17665
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-108440] N82-17668
Guide for spill prevention control and countermeasure inspectors
[PB82-115296] N82-17670

SPIN EXCHANGE
The cluster approach to the magnetic susceptibilities of low-dimensional copper clusters N82-17333

SPIN TESTS
Magnetic bearing reaction wheel tests --- performed on a three-axis air bearing simulator
[ESA-TT-699] N82-17511

SPINEL
An oxygen electrode based on nickel/cobalt spinel
[AD-A107602] N82-17443

SPIRAL GALAXIES
A search for halos around spiral galaxies N82-18082
Optical and infrared search for massive halos of galaxies N82-18086
A study of extragalactic supernova remnants N82-18087

SPORADIC E LAYER

An overview on incoherent scatter observations of mid-latitude sporadic E and further comments for improved data analysis
[INPE-2247-PRE/031] N82-17422

SPRAYERS

Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669

SPUTTERING

Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

ST LAWRENCE VALLEY (NORTH AMERICA)

Simulation of ice-cover growth and thermal decay on the upper St. Lawrence River N82-17550

Simulation of ice-cover growth and decay in one dimension on the upper St. Lawrence River
[PB82-114208] N82-17582

STABILITY

Performance of activated sludge processes: Reliability, stability and variability
[PB82-109604] N82-17689

The stable pedigrees of critical branching populations
[CTH-MATH-1981-15] N82-17927

STABILIZATION

Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410

Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652

STABILIZERS (FLUID DYNAMICS)

Some observations on the corrosion of aircraft at the air force base in Bandirma, Turkey N82-17353

STAINLESS STEELS

Corrosion fatigue of offshore and ship-building steels N82-17346

STANDARDIZATION

Standardization study for advanced aircraft armament system program
[AD-A107681] N82-17158

STANDARDS

New technology challenges metrology
[PB82-105974] N82-17416

Specifications, tolerances, and other technical requirements for weighing and measuring devices, 1982 edition
[PB82-113952] N82-17497

Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

Federal requirements for a Federal information processing standards data dictionary system
[PB82-117607] N82-18060

A survey of standardization efforts of coded character sets for text processing
[PB82-105891] N82-18061

Publications of the National Bureau of Standards 1980 catalog: A compilation of abstracts and key words and author indexes
[PB82-104688] N82-18062

STAPHYLOCOCCUS

Prevention of staphylococcal infections during space flights N82-17818

STAR CLUSTERS

A photometric search for white dwarfs in intermediate-age open clusters N82-18084

STARS

Optical and infrared search for massive halos of galaxies N82-18086

STATIC AERODYNAMIC CHARACTERISTICS

Application to missile dynamics
[MBB-UA-553-80-O] N82-17248

STATIC LOADS

SPAR reference manual update SPAR level 15
[NASA-CR-161967] N82-17520

Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] N82-17639

STATIC TESTS

Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] N82-17639

Static and dynamic investigations for the model of a wind rotor
[ISD-272] N82-17642

STATISTICAL ANALYSIS

Statistical aspects of reliability, maintainability and availability
[AD-A107618] N82-17517

STATISTICAL DISTRIBUTIONS

Accelerated life testing under competing exponential failure distributions
[AD-A107626] N82-17516

Principal components biplots and alpha and beta diversity --- of diatoms in moorland pools
[IWIS-A-81-ST-23-15] N82-17923

Exact distribution of certain general test statistics in multivariate analysis N82-17931

A continuous shading scheme for two-variable mapping N82-17939

STATISTICAL MECHANICS

Weighting of distances in factorial analysis
[ENST-C-81005] N82-17543

Asymptotic behavior of the Boltzmann equation with infinite range forces
[CTH-MATH-1981-18] N82-17930

Functional integral approach to classical statistical dynamics N82-18006

Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054

STATISTICAL TESTS

Exact distribution of certain general test statistics in multivariate analysis N82-17931

Compound function and linear model methods for the multivariate analysis of ordinal categorical data N82-17937

P-values for multi-stage and sequential tests
[AD-A108127] N82-17942

Hypothesis testing in contingency tables with small samples N82-17946

STATISTICAL WEATHER FORECASTING

A statistical analysis of monthly precipitation in Denmark
[DMI-CLIMATOL-PAPERS-7] N82-17789

STEADY FLOW

Program FINSUP: Steady and unsteady supersonic flow in cascades by a finite element method
[PB82-114612] N82-17472

STEAM FLOW

Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] N82-17507

STEAM TURBINES

Influence of correlations and computational methods on the prediction of overall efficiency N82-17180

Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184

STEELS

Electron beam/laser glazing of iron-base materials
[AD-A107559] N82-17492

Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527

STEEPEST DESCENT METHOD

An iterative method for solving electrostatic problems
[AD-A107740] N82-17956

STEERING

The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] N82-17564

The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] N82-17565

STELLAR EVOLUTION

Dust-like stages in the early universe and the restrictions on the primordial black hole spectrum
[REPT-646] N82-18089

Evolutionary variations of solar luminosity N82-18112

STELLAR GRAVITATION

Gravitational wave generation by stellar core collapse N82-18093

STELLAR LUMINOSITY

Evolutionary variations of solar luminosity N82-18112

The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113

STELLAR MAGNITUDE

The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113

STELLAR MASS

H2 emission in molecular clouds N82-18101

STELLAR MASS ACCRETION

The role of cyclotron resonance processes in the spectra of accreting neutron stars
[ISSN-0340-8922] N82-18099

STELLAR MODELS

Gravitational wave generation by stellar core collapse N82-18093

STELLAR SPECTRA

A photometric search for white dwarfs in intermediate-age open clusters N82-18084

High energy X-ray observations of CYG X-3 from from OSO-8: Further evidence of a 34.1 day period
[NASA-TM-83862] N82-18085

STELLARATORS

The dynamics of microprocesses and current turbulent heating of ions in Uragan-2 stellarator
[IPPJ-548] N82-18008

STIFFNESS

Stiffness degradation of impact damaged structure N82-17168

STIRRING

Fluid flow and gas dispersion in stirred tank reactors N82-17457

STOCHASTIC PROCESSES

Applications of stochastic differential equations in flight mechanics
[MBB-UA-589-81-O] N82-17159

Amplitude density distribution of a sum of speech signals
[IND-FB-106] N82-17437

Stochastic control system parameter identifiability
[NASA-CR-166300] N82-17898

Stochastic aspects of climatic transitions: Response to periodic forcing
[AERONOMICA-ACTA-A-234-1981] N82-17904

A simple heuristic approach to simplex efficiency
[AD-A107913] N82-17915

A robust nonparametric likelihood ratio test
[AD-A108124] N82-17940

Person-by-person optimal solution to the decentralised LQG stochastic control problem with control sharing information pattern
[PB82-113457] N82-17944

Semigroups of column stochastic matrices N82-17955

Functional integral approach to classical statistical dynamics N82-18006

STOPPING

Another proof for the completeness of a rule for the fair termination of guarded commands and another rule for their just termination
[MC-IW-178/81] N82-17922

STORAGE STABILITY

Comparative evaluation of antimicrobial activity of some urine preservatives N82-17830

STORAGE TANKS

Thermal stratification in storage tanks N82-17649

STORMS

Analytic modeling of severe vortical storms
[AD-A107706] N82-17785

STRAPDOWN INERTIAL GUIDANCE

Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245

STRATA

High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001078] N82-17577

STRATIFICATION

Thermal stratification in storage tanks N82-17649

STRATIGRAPHY

Depositional environments of the subsurface Cretaceous deposits of southeastern North Carolina N82-17701

The biostratigraphy and taxonomy of Mesozoic radiolaria from the Samail Ophiolite and Hawasina Complex, Oman N82-17728

Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733

Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results N82-17735

STRATOSPHERE

Stratospheric CCN sampling program --- volcanology, Mount Saint Helens
[NASA-CR-168396] N82-17706

STRATOSPHERE RADIATION
Stratospheric aerosol properties from Earth limb photography and Mie scattering theory
[AERONOMICA-ACTA-A-235-1981] N82-17705
Recent injections of nuclear debris in the atmosphere N82-17974
STRATUS CLOUDS
Natural and HISS cloud droplet data as sampled during the 1980 - 1981 AEFA/Saint Paul field program
[AD-A107577] N82-17784
STREAMS
Connecticut Coastal River basins overview: Public review draft
[PB82-105925] N82-17590
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591
STRESS ANALYSIS
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites
[NASA-CR-168421] N82-17267
Stress analysis and test philosophy for wind energy converter blades
[NBB-UD-300-80-O] N82-17536
Load capacity of notched components as derived from post-yield fracture criteria --- for failure analysis of reactor components
[ISD-286] N82-17538
STRESS CORROSION
Stress corrosion of ceramic materials
[AD-A108045] N82-17360
STRESS CORROSION CRACKING
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions
[VTT-88] N82-17340
Corrosion Fatigue --- conferences
[AGARD-CP-316] N82-17342
Mechanisms of corrosion fatigue --- of high strength aluminum alloys N82-17343
Fracture mechanics based modelling of the corrosion fatigue process N82-17344
Variable amplitude corrosion fatigue behavior of a low carbon steel N82-17347
Corrosion prevention methods developed from direct experience with aerospace structures N82-17359
Recent developments in materials and processes for aircraft corrosion control N82-17361
New concepts in multifunctional corrosion for aircraft and other systems N82-17362
Study of grain-boundary segregation using the Auger electron emission technique
[DE82-000789] N82-18051
STRESS CYCLES
Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521
STRESS INTENSITY FACTORS
Stress intensity for interacting flaws. Part 3: Photoelastic determination of mixed modes; stress intensity factors for interacting flaws
[OUEL-1368/81-PT-3] N82-17542
STRESS-STRAIN RELATIONSHIPS
A derivation of the small-strain incremental theory of plasticity from thermomechanics
[OUEL-1371/81] N82-17539
STRIP MINING
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] N82-17594
STRONTIUM
The diagenesis of marine carbonate sediments: Experimental and natural geochemical observations
N82-17732
STRUCTURAL ANALYSIS
Strength degradation of impact damaged structure
N82-17169
The seismic resistant design of R/C coupled structural walls
[PB82-113358] N82-17417
SPAR reference manual update SPAR level 15
[NASA-CR-161967] N82-17520
Implementation of anisotropic and nonlinear thermal stress models in ADINA 78
[AD-A108085] N82-17529
PATCHES-3. User's manual
[AD-A107709] N82-17530
A closed form local solution of a nonlinear structural design problem in terms of the design parameters
[AD-A107669] N82-17531
Theoretical basic for CTABS80: A computer program for three-dimensional analysis of building systems
[AD-A107635] N82-17890
STRUCTURAL BASINS
On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741
STRUCTURAL DESIGN
Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160
Advanced space system analysis software. Technical, user, and programmer guide
[NASA-CR-165796] N82-17256
The seismic resistant design of R/C coupled structural walls
[PB82-113358] N82-17417
A closed form local solution of a nonlinear structural design problem in terms of the design parameters
[AD-A107669] N82-17531
STRUCTURAL DESIGN CRITERIA
Evaluation of control and protection circuits
[PB82-105065] N82-17450
USRD type F63 transducer
[AD-A106748] N82-17959
STRUCTURAL ENGINEERING
Limit state design in geotechnical engineering
[PB82-113440] N82-17418
STRUCTURAL FAILURE
Hydrodynamic ram damage N82-17166
Strength degradation of impact damaged structure
N82-17169
STRUCTURAL PROPERTIES (GEOLOGY)
A seismic study on cracks in crystalline rock
[FOA-C-20417-E1] N82-17716
The kinematic and metamorphic development of the Towaliga-Goat Rock mylonites, Georgia-Alabama
N82-17730
STRUCTURAL STABILITY
Stiffness degradation of impact damaged structure
N82-17168
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640
STRUCTURAL STRAIN
Analysis methods for predicting structural response to projectile impact N82-17162
STRUCTURAL VIBRATION
Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-106] N82-17526
SUBGROUPS
Fundamental order relations on regular semigroups N82-17950
SUBMERGED BODIES
Inverse axisymmetric body study
[AD-A107682] N82-17464
SUBMILLIMETER WAVES
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh
[AD-A107939] N82-17491
SUBROUTINE LIBRARIES (COMPUTERS)
NSWC/DL library of mathematics subroutines
[AD-A108106] N82-17916
SUBROUTINES
Implementation of a display routine for coded map data bases
[FOA-C-30241-E] N82-18059
SUBSTRATES
Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17282
Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650
SUCTION
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
SUGARS
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294
SULFUR COMPOUNDS
Luminescent photoelectrochemical cells. 7: Photoluminescent and electroluminescent properties of cadmium sulfo-selenide electrodes
[AD-A107581] N82-17311
Sulfur in the corrosion of superalloys
[AD-A107667] N82-17337
SULFUR DIOXIDES
Modeling of SO2 oxidation in smog
[PB82-101932] N82-17323
Sulfur balance in outdoor smog chambers and resulting implications for sulfur dioxide photooxidation studies N82-17651
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669
SULFUR OXIDES
Laser spectroscopy of molecular beams
N82-17293
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] N82-17684
SUMMER
The summer monsoon rains over South and East Asia and West Pacific N82-17771
Regionality of climatic change in monsoon Asia
N82-17777
SUMS
Rigorous high speed separation of zeros of Riemann's zeta function
[MC-NW-113/81] N82-17921
SUN
Thermal perturbation of the Sun
[NASA-CR-168459] N82-18111
Evolutionary variations of solar luminosity
N82-18112
The effect of perturbations of convective energy transport on the luminosity and radius of the Sun
[NASA-CR-168445] N82-18113
SUPERCONDUCTING POWER TRANSMISSION
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] N82-17448
SUPERCONDUCTIVITY
Gauge-dependent critical properties of the nematic to smectic-A phase transition in liquid crystals in the 1/N expansion N82-18036
SUPERCRITICAL WINGS
Experimental trim drag values for conventional and supercritical wings
[NASA-CR-168500] N82-17126
A wind tunnel study of the flutter characteristics of a supercritical wing
[NLR-MP-81002-U] N82-17129
SUPERNOVA REMNANTS
A study of extragalactic supernova remnants
N82-18087
SUPERPLASTICITY
Superplastic aluminum evaluation
[AD-A107760] N82-17338
SUPERSONIC FLOW
Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187
Program FINSUP: Steady and unsteady supersonic flow in cascades by a finite element method
[PB82-114812] N82-17472
SUPPLYING
Energy environment study
[NASA-CR-168458] N82-17654
SURFACE COOLING
Fling-off cooling of straight spur gears --- oil cooling of the meshing zone
[WTHD-136] N82-17510
SURFACE DEFECTS
Defect detection and identification in Si3N4 and SiC using controlled reluctance electromagnetic test methods
[AD-A107726] N82-17369
SURFACE FINISHING
Electron beam/laser glazing of iron-base materials
[AD-A107559] N82-17492
SURFACE NAVIGATION
DOT should terminate further LORAN-C development and modernization and exploit the potential of the NAVSTAR/Global Positioning System
[AD-A107768] N82-17143

Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] N82-17566

SURFACE PROPERTIES
Effects of multiple scattering and surface albedo on the photochemistry of the troposphere
[NASA-CR-168417] N82-17707

SURFACE REACTIONS
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108695] N82-17667

SURFACE ROUGHNESS
The representation of image texture
[AD-A107636] N82-17264
Groove depth requirements for tine-textured rigid pavement 5: Durability of tine texturing on PCC pavements
[PB82-104951] N82-17413

SURFACE ROUGHNESS EFFECTS
Survey on the effect of blade surface roughness on compressor performance N82-17191

SURFACE STABILITY
Bifurcating instability of the free surface of a ferrofluid N82-17473
Computational theory of line drawing interpretation
[NASA-CR-165804] N82-17897

SURFACE TEMPERATURE
Change of global climate during recent 100 years
N82-17775

SURFACE VEHICLES
An investigation of the high rate volumetric properties of snow
[AD-A108032] N82-17569
Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

SURFACE WATER
Nitrogen in ground water and surface water from sewered and unsewered areas, Nassau County, Long Island, New York
[PB82-109885] N82-17586
Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695
Measurement of visible radiation transfer in water under laboratory and field conditions
[PB82-108481] N82-18004
Urban stormwater management and technology: Case study in San Francisco
[PB82-105594] N82-18081

SURFACE WAVES
Analytical representation of Atlas I (Trestle)
[AD-A107674] N82-17433

SURFACTANTS
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] N82-17507

SURVEYS
Federal requirements for a Federal information processing standards data dictionary system
[PB82-117607] N82-18060
A survey of standardization efforts of coded character sets for text processing
[PB82-105891] N82-18061

SURVIVAL
A method of nonparametric survival analysis for doubly censored data N82-17938

SUSPENDING (HANGING)
QD: A quartz declinometer of classic type --- quartz fiber suspension
[DMI-GEOPHYS-PAPERS-R-65] N82-17479

SWITCHING CIRCUITS
A 10kW series resonant converter design, transistor characterization, and base-drive optimization
[NASA-CR-165546] N82-17439

SYMMETRICAL BODIES
SPAR reference manual update SPAR level 15
[NASA-CR-161967] N82-17520

SYMMETRY
Symmetry and multiple electromagnetic scattering by a cluster of spheres
[AD-A108118] N82-17428
Three-dimensional shape and position of Venus's bow shock
[REPT-656] N82-18102
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83881] N82-18106

SYMPATHETIC NERVOUS SYSTEM
Human adrenosympathetic system during immersion in water N82-17819

SYNOPTIC METEOROLOGY
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] N82-17645
Climate circulation processes in South-East Asia during winter monsoon N82-17769

SYNTHESIS (CHEMISTRY)
Preparation of InP by solution and melt growth techniques
[AD-A107646] N82-18047

SYNTHETIC APERTURE RADAR
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17798

SYNTHETIC FUELS
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030649] N82-17402
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] N82-17630
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] N82-17690

SYSTEM EFFECTIVENESS
Multicomponent continuous flow kinetic analysis
N82-17280
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] N82-17398
Synfuel modified diesel
[DE82-002298] N82-17400
Solarization/conservation technology development for existing housing
[DE82-002175] N82-17407
A measure of effectiveness: Analysis and application --- information completion measure for communication networks
[AD-A107886] N82-17434
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] N82-17635

SYSTEM IDENTIFICATION
Two estimation methods for nonstationary spectra
[ENST-D-81006] N82-17926

SYSTEMS ANALYSIS
SAVANT: A database manipulation technique for system architecture design verification and analysis
N82-17095
A consistent approach to the development of system requirements and software design N82-17099
Recovery in distributed processing systems
N82-17102
State-variable analysis of non-linear circuits with a desk computer
[NASA-TM-83876] N82-17440
High angle mining system Task report: System requirements, performance specifications, and review of state-of-the-art technology
[DE82-001078] N82-17577
Design, analysis, and test verification of advanced encapsulation systems --- low cost solar arrays
[NASA-CR-168406] N82-17605
Food crises and famines: The UNRISD food systems approach N82-17762

SYSTEMS ENGINEERING
Functional documentation. A practical aid to the orderly solution of the system design problem
N82-17098
Tubing systems for the measurement of fluctuating pressures in wind engineering
[OUEL-1370/81] N82-17231
Control system design for the large space systems technology reference platform
[NASA-CR-168426] N82-17255
World Weather Watch Tropical Cyclone Program. Typhoon operational experiment (Topex): Automatic weather stations for tropical cyclone areas --- systems design and operation
[WMO-570] N82-17790
COMPLEX ALIGN: A technique for the characteristic locus method of design --- of controllers
[OUEL-1366/81] N82-17925

SYSTEMS INTEGRATION
Next generation military aircraft will require hierarchical/multilevel information transfer systems --- packet switching N82-17114
Integrated control of mechanical system for future combat aircraft N82-17117
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] N82-18070

SYSTEMS SIMULATION
F/A-18 weapons system support facilities
N82-17120

T

TABLES (DATA)
BBC/Sulzer. 4 stage transonic compressor
N82-17197

TAIL ASSEMBLIES
Experimental trim drag values for conventional and supercritical wings
[NASA-CR-168500] N82-17126

TANKS (CONTAINERS)
Fluid flow and gas dispersion in stirred tank reactors N82-17457

TARGET ACQUISITION
Multiple target tracking with an AM reticule seeker
[AD-A107854] N82-18000

TARGET MASKING
Reflections on aircraft unmask ranges
[AD-A107953] N82-17948

TAXONOMY
The biostratigraphy and taxonomy of Mesozoic radiolaria from the Samail Ophiolite and Hawasina Complex, Oman N82-17726

TEA LASERS
Photophysics and photochemistry of molecular gases irradiated by megawatt CO2 laser radiation
N82-17297

TEARING MODE (PLASMAS)
Model calculations of the tearing instability associated with ac-modulation of the plasma-current in Tokamaks
[IPP-6/198] N82-18013

TECHNOLOGICAL FORECASTING
Next generation military aircraft will require hierarchical/multilevel information transfer systems --- packet switching N82-17114
Helicopter development in France N82-17216
Prospects for materials (plastics, elastomers, paints). Volume 2: Plastic materials (assessment and evolution of applications of plastic materials for mechanical constructions)
[CETIM-12-B-194-VOL-2] N82-17383
Prospects for materials (plastics, elastomers, paints). Volume 5: Paints
[CETIM-12-B-194-VOL-5] N82-17386
Prospects for materials (plastics, elastomers, paints). Volume 6: Elastomers
[CETIM-12-B-194-VOL-6] N82-17387
Overview study of Space Power Technologies for the advanced energetics program --- spacecraft
[NASA-CR-165269] N82-17606

TECHNOLOGIES
Contribution of the Second United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE)
[INPE-2137-RPE/360] N82-18064

TECHNOLOGY ASSESSMENT
Systems study of transport aircraft incorporating advanced aluminum alloys
[NASA-CR-165820] N82-17153
Technology overview for advanced aircraft armament system program
[AD-A107680] N82-17155
Summary of answers to the questionnaire
N82-17195
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] N82-17315

New technology challenges metrology
[PB82-105974] N82-17416
The seismic resistant design of R/C coupled structural walls
[PB82-113358] N82-17417
Overview study of Space Power Technologies for the advanced energetics program — spacecraft
[NASA-CR-165269] N82-17606
Technology and oceanography: An assessment of federal technologies for oceanographic research and monitoring
[PB82-101718] N82-17807
Computer science and technology: An assessment and forecast of ADP in the Federal government
[PB82-116112] N82-17883

TECHNOLOGY TRANSFER
NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069
Technology transfer and the management of human services
[PB82-105644] N82-18077

TECHNOLOGY UTILIZATION
Gamma-ray instrumentation and its uses in space N82-17241
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] N82-17630
Microwave discharges — theory and applications
[LP-192] N82-18027
NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069

TECTONICS
Global tectonic control of secular variations in phanerozoic sedimentary rock/ocean/atmosphere chemistry N82-17545
The seismicity of forearc marginal wedges (accretionary prisms) and seismotectonics of convergent margins N82-17726
The kinematic and metamorphic development of the Towaliga-Goat Rock mylonites, Georgia-Alabama N82-17730
Time dependent thermal modeling of plate tectonic processes N82-17737
Terrestrial heat flow overlying the Andean subduction zone N82-17738
Anomalous radon (222) emission and its association with earthquakes and tectonism N82-17739
Kinematic thermal models of the Earth's mantle N82-17740
On the tectonic evolution of the Philippine plate: Marine geophysical and geological studies of the Parece Vela Basin, the West Philippine Basin and the Mariana Fore arc N82-17741

TELECOMMUNICATION
A very high throughput NETWORK: The ESCALIBUR project
[ENST-D-81004] N82-17426
Training of information specialists
[PB82-103227] N82-18063

TELESCOPES
Gamma-ray instrumentation and its uses in space N82-17241

TEMPERATE REGIONS
Climatic change and social disturbance N82-17773

TEMPERATURE DEPENDENCE
Temporal and temperature dependence of the energy transfer process among Eu-3(+) in an amorphous solid
[AD-A107951] N82-17307
Temperature dependence of the homogeneous linewidth of the (D sub 0)-5 - (F sub 0)-7 transition of Eu-3(+) in amorphous hosts at high temperatures
[AD-A107900] N82-17375
Moderate temperature detector development
[NASA-CR-167504] N82-17998

TEMPERATURE DISTRIBUTION
Tidal variability in the current and temperature fields on the Southern California continental shelf N82-17797
Variations in the thermal structure and wind field occurring in the western Indian Ocean during the monsoons
[AD-A107761] N82-17800

TEMPERATURE EFFECTS
Effects of temperature on excited-state description of luminescent photoelectrochemical cells employing tellurium-doped cadmium sulfide electrodes
[AD-A107840] N82-17306

TEMPERATURE GRADIENTS
An equation of state for fluid ethylene
[PB82-107673] N82-17325
Further studies on the climatic change during historical times in China N82-17776
Regionality of climatic change in monsoon Asia N82-17777
An analysis of Wangara micrometeorology: Surface stress, sensible heat, evaporation, and dewfall
[PB82-114190] N82-17793
Two-dimensional photometry of planetary nebulae N82-18083
Thermal perturbation of the Sun
[NASA-CR-168459] N82-18111

TEMPERATURE MEASUREMENT
Broad-band rotational cars thermometry in nitrogen gas N82-17451

TEMPERATURE PROFILES
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699

TEMPERING
Study of the industrial use of organic additives for tempering — of steels
[CETIM-1-2G-15-0] N82-17341

TEMPORAL DISTRIBUTION
Some results of numerical experiments on the computation of the Kootwijk and Wettzell satellite laser ranging station coordinates
[VTH-M-409] N82-17499
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] N82-17803

TEMPORAL RESOLUTION
Phase demodulator with high temporal and angular resolution for the measurement of Faraday rotation by means of a carrier frequency — in plasma experiments
[IPF-81-4] N82-17441

TENSILE TESTS
Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature
[NAL-TR-678] N82-17368

TERMINAL BALLISTICS
Description of projectile threats N82-17161
Analysis methods for predicting structural response to projectile impact N82-17162
Analysis methods for ballistic damage size and type N82-17163
Damage from High explosive (HE) projectiles N82-17164

TERMINAL GUIDANCE
Optical data processing for missile guidance
[AD-A107592] N82-17145
Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245

TERRAIN
Geological investigations of pre-late Jurassic terranes in the southernmost Andes N82-17733
Terrain model animation
[AD-A107911] N82-17887

TERRAIN ANALYSIS
Reflections on aircraft unmask ranges
[AD-A107953] N82-17948

TEST CHAMBERS
Sulfur balance in outdoor smog chambers and resulting implications for sulfur dioxide photooxidation studies N82-17651

TEST FACILITIES
Development and laboratory testing of a thermal emission velocimeter for application to an erosion nose tip test facility
[AD-A107713] N82-17482
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] N82-17603

TESTES
Effect of commercial frequency electromagnetic field on androgen function of rat tests N82-17845

TEXTURES
The representation of image texture
[AD-A107636] N82-17264
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17886

THEMATIC MAPPING
Gravity maps of Central Africa N82-17557

THEORETICAL PHYSICS
A theoretical study of three-body correlations in atomic fluids N82-17989

THERMAL CONTROL COATINGS
Review of NASA progress in thermal barrier coatings for stationary gas turbines
[NASA-TM-81716] N82-17335
Effects of arc current on the life in burner rig thermal cycling of plasma sprayed ZrOsub2-Ysub2Osub3
[NASA-TM-82795] N82-17453

THERMAL CYCLING TESTS
Effects of arc current on the life in burner rig thermal cycling of plasma sprayed ZrOsub2-Ysub2Osub3
[NASA-TM-82795] N82-17453

THERMAL DECOMPOSITION
Effects on solid-state reactions during thermal decomposition of nitrocellulose — rocket propellant
[DRIC-T-6460] N82-17390

THERMAL EXPANSION
Harmonic and anharmonic properties of diamond structure crystals with application to the calculation of the thermal expansion of silicon
[NASA-CR-168437] N82-18041

THERMAL INSTABILITY
Some analytical aspects of field desorption mass spectrometry N82-17274

THERMAL INSULATION
Wind tunnel tests of the Space Shuttle foam insulation with simulated debonded regions
[AD-A108079] N82-17250
Community solar demonstration/dissemination center
[DE82-000994] N82-17632

THERMAL NOISE
Sixth International Conference on Noise in Physical Systems
[PB82-105305] N82-17449

THERMAL STRESSES
Implementation of anisotropic and nonlinear thermal stress models in ADINA 78
[AD-A108085] N82-17529

THERMIONIC CONVERTERS
DOE/JPL advanced thermionic technology program
[NASA-CR-168436] N82-17636

THERMIONIC DIODES
DOE/JPL advanced thermionic technology program
[NASA-CR-168436] N82-17636

THERMIONIC EMITTERS
Some analytical aspects of field desorption mass spectrometry N82-17274

THERMIONIC POWER GENERATION
DOE/JPL advanced thermionic technology program
[NASA-CR-168436] N82-17636

THERMISTORS
Portable medical status and treatment system
[NASA-CR-167496] N82-17862

THERMOCHEMICAL PROPERTIES
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] N82-17399

THERMOCHEMISTRY
Asymptotic methods especially in combustion
[AD-A108023] N82-17308
Hydrogen bonding in asphaltenes and coal liquids
[DE82-001131] N82-17312
Effects of preignition on pulverized-coal combustion
[DE82-002565] N82-17313
Land biomass program
[PB82-117391] N82-17405

THERMOCLINES
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600
Thermal stratification in storage tanks N82-17649

THERMODYNAMIC CYCLES
Aerodynamic components for small turboshaft engines N82-17211

THERMODYNAMIC EFFICIENCY
The influence of new turbine technologies on their components N82-17210

The distress regime on the bimotored helicopter
N82-17219

THERMODYNAMIC EQUILIBRIUM
Investigations of elementary reactions of the NHZ radical with a chemical radical source
[MPIS-2/1981] N82-17319

THERMODYNAMIC PROPERTIES
An equation of state for fluid ethylene
[PB82-107673] N82-17325
Basic research on macromolecular dynamics
[PB82-115502] N82-17389
The thermo-mechanical properties of the oceanic lithosphere N82-17808
Quantum corrections to the properties of dense plasmas
[LP-189] N82-18026
Calculation of the thermodynamic properties of a mixture of gases as a function of temperature and pressure
[NASA-TM-83861] N82-18054

THERMODYNAMICS
Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1: Construction of apparatus and preliminary experiments
[AD-A108018] N82-17305
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] N82-17399
Evaluation of alternatives in downhole steam generation
[DE82-001943] N82-17574
Mathematical models in nuclear-reactor thermal hydraulics
[HTS/81/3] N82-17994

THERMOELASTICITY
Implementation of anisotropic and nonlinear thermal stress models in ADINA 78
[AD-A108065] N82-17529

THERMOSPHERE
Rocket-borne instrumentation for the measurement of atomic oxygen based on chemical release in the lower thermosphere
[AERONOMICA-ACTA-A-231-1981] N82-17257

THETA PINCH
Rotational instabilities in the field-reversed theta pinch: Results of hybrid simulations
[AD-A107651] N82-18015

THIAMINE
Vitamin C, B sub 1 and B sub 6 excretion in urine during 182-day antiorthostatic hypokinesia
N82-17824

THICK FILMS
Thick-film analysis: Literature search and bibliography
[DE82-000960] N82-17447

THIN FILMS
Development of high sensitivity X-ray and electron-beam resist processes
[AD-A107833] N82-17374
Optical thin film coatings
[AD-A107806] N82-18001
Optical characterization of thin metallic and semiconducting films in the far infrared --- pumpd infrared lasers N82-18037
Surface analysis applied to thin films of molecular solids N82-18040
Research in LPE of doped LnibOsub3 and LiTaOsub3 thin films
[AD-A107686] N82-18045
Polarization mechanisms in phase 2 poly (vinylidene fluoride) films
[AD-A107850] N82-18049

THIN LAYER CHROMATOGRAPHY
In situ analysis of thin layer chromatography plates using an imaging detector N82-17276

THREE BODY PROBLEM
Computational methods for the nuclear- and neutron-matter problems
[DE82-001584] N82-17981
A theoretical study of three-body correlations in atomic fluids N82-17989

THREE DIMENSIONAL COMPOSITES
PATCHES-3. User's manual
[AD-A107709] N82-17530

THREE DIMENSIONAL FLOW
Three dimensional flow field inside compressor rotor, including blade boundary layers
[NASA-CR-168410] N82-17175
A general purpose computer program for multidimensional one and two phase flow
[NTS/81/11] N82-17458
Streamwise vorticity decay downstream of a three dimensional protuberance
[AD-A108080] N82-17466
Method for calculating three-dimensional flow in bladed turbomachine by using arbitary quasi perpendicular intersecting planes
[AD-A108475] N82-17467

THREE DIMENSIONAL MOTION
Computational theory of line drawing interpretation
[NASA-CR-165804] N82-17897

THRESHOLDS (PERCEPTION)
Temporal integration of acoustic power for interrupted stimuli at suprathreshold levels
N82-17856

THRUST DISTRIBUTION
Tests of a D vented thrust deflecting nozzle behind a simulated turbofan engine
[NASA-CR-3508] N82-17122

THRUST VECTOR CONTROL
SLD reaction control and propulsion system. Preliminary design study
[AD-A107560] N82-17261

THUNDERSTORMS
Multiple Doppler radar analysis of severe thunderstorms: Designing a general analysis system
[PB82-114117] N82-17794

TIDAL FLATS
The characterization and evolution of carbonate tidal deltas, upper Florida Keys N82-17796

TIDES
Tidal variability in the current and temperature fields on the Southern California continental shelf
N82-17797

TIME
Impulse response determination in the time domain
[AD-A107828] N82-17431
Graphs of anomalous energy confinement times for ASDEX, INTOR, JET, PLT, TFTR and ZEPHYR --- tokamaks
[IPP-6/200] N82-18012

TIME CONSTANT
A discrete-time multivariable criterion for limit cycle predictions
[OUEL-1369/81] N82-17902

TIME DEPENDENCE
Time dependent thermal modeling of plate tectonic processes N82-17737
Stochastic aspects of climatic transitions: Response to periodic forcing
[AERONOMICA-ACTA-A-234-1981] N82-17904
Effect of record length on the correlation of complex exponentials
[AD-A107738] N82-17911
Proportional hazards model with time-dependent covariates: Large sample theory and related topics
N82-17945

TIME DIVISION MULTIPLEXING
Queueing analysis of synchronous time division multiplexing with individual source buffering
[NASA-CR-168443] N82-17252

TIME FUNCTIONS
Shielded balanced and coaxial transmission lines. Parametric measurements and instrumentation relevant to signal waveform transmission in digital service
[PB82-105297] N82-17438

TIN
Solderability improvements for drag soldered PWBs
[DE82-000961] N82-17446

TIN OXIDES
Development of ion beam sputtered ITO/polysilicon solar cell technology N82-17650

TIRES
Rolling resistance measurements 106 passenger car tires
[PB82-116625] N82-17512

TISSUES (BIOLOGY)
Ultrastructure of blood vessels and muscle fibers of rat skeletal muscles after flights aboard Cosmos-605 and Cosmos-782 biosatellites N82-17835
Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843
Beam broadening in dense scattering media --- laser irradiation of biological tissue
[MBB-UA-583-81-O] N82-18002

TITANIUM
An investment mold for titanium casting
[PB82-104662] N82-17419

TITANIUM COMPOUNDS
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
Energy bands and superlattice formation ih titanium diselenide N82-18035

TOKAMAK DEVICES
Graphs of anomalous energy confinement times for ASDEX, INTOR, JET, PLT, TFTR and ZEPHYR --- tokamaks
[IPP-6/200] N82-18012
Model calculations of the tearing instability associated with ac-modulation of the plasma-current in Tokamaks
[IPP-6/198] N82-18013

TOLERANCES (MECHANICS)
Damage tolerant design for cold-section turbine engine disks
[AD-A107863] N82-17176
Specifications, tolerances, and other technical requirements for weighing and measuring devices, 1982 edition
[PB82-113952] N82-17487

TOLERANCES (PHYSIOLOGY)
Antihypoxic efficacy of intermittent mode of pressure chamber conditioning of man N82-17827

TOMOGRAPHY
High resolution 3-D wavelength diversity imaging
[AD-A107832] N82-17480

TOPOGRAPHY
Gravity maps of Central Africa N82-17557

TOPOLOGY
Combinatorial maps N82-17954

TOROIDAL PLASMAS
Space and time resolved measurements of ion energy distributions by neutral beam injection in TORTUR 2 --- toroidal turbulence experiment (TORTUR)
[REPT-81-137] N82-17976
First-order toroidal correction to the minimum energy state of a cylindrical plasma column of finite beta
[REPT-81-133] N82-18011
Magnetohydrodynamic stability of structurally stable toroidal plasmas N82-18029

TORSIONAL VIBRATION
Helicopter propulsions systems. 1: Vibration prevention systems on helicopters 2: Problem of noise in the cabin N82-17222

TOWERS
Static and dynamic investigations of different towers for wind turbines
[ISD-274] N82-17637

TOXIC HAZARDS
Investigation of in-situ gelation to control emissions from abandoned hazardous waste sites
[PB82-103508] N82-17409
Assessment and control of chrysotile asbestos emissions from unpaved roads
[PB82-102526] N82-17411
Modification of spill factors affecting air pollution. Volume 1: An evaluation of cooling as a vapor mitigation procedure for spilled volatile chemicals
[PB82-108382] N82-17657
Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658
Attenuation of polybrominated biphenyls and hexachlorobenzene by Earth materials
[PB82-107558] N82-17663
A hazardous materials spill warning system
[PB82-108424] N82-17665
Use of selected sorbents and an aqueous film forming foam on floating hazardous materials
[PB82-108895] N82-17667
Solid waste data: A compilation of statistics on solid waste management within the United States
[PB82-107301] N82-17688
NATO-CCMS pilot study on disposal of hazardous wastes. Project: Thermal treatment. Project leader: Federal Republic of Germany
[PB82-114521] N82-17691

NATO-CCMS pilot study on disposal of hazardous wastes: Chemical, physical, and biological treatment of hazardous wastes in NATO countries. Project leader: United States
[PB82-114539] N82-17692

NATO-CCMS pilot study on disposal of hazardous wastes. Project: Landfill research. Project leader: Canada
[PB82-114547] N82-17693

NATO-CCMS pilot study on disposal of hazardous wastes: Metal finishing wastes. Project leader: France
[PB82-114554] N82-17694

Respiratory toxicology, 1981
[AD-A107672] N82-17841

Health effects of carbon monoxide and ozone
[PB82-114265] N82-17866

TOXICITY

Mammalian toxicological evaluation of DIMP and DCPD (Phase 3 - IMPA)
[AD-A107574] N82-17840

Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A107673] N82-17842

Comparative biochemistry and metabolism. Part 1: Carcinogenesis
[AD-A107614] N82-17865

TOXICITY AND SAFETY HAZARD

The Potential Atmospheric Impact of Chemicals Released to the Environment: Proceedings of four workshops
[PB82-119447] N82-17686

TOXICOLOGY

Respiratory toxicology, 1981
[AD-A107672] N82-17841

TRACE ELEMENTS

The application of electrochemical detection in high performance liquid chromatograph (HPLC): Selective determination of readily oxidisable compounds at trace level
[DRIC-T-6461] N82-17298

Nearshore marine trace metal geochemistry
[PB82-109372] N82-17804

TRACKING (POSITION)

Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

TRACKING STATIONS

Kalman filter satellite orbit improvement using laser ranging measurements from a single tracking station
[VTH-M-414] N82-17501

TRACTION

Stress evaluations under rolling/sliding contacts
[NASA-CR-165561] N82-17521

TRAFFIC

Operating costs and characteristics of minibuses
[PB82-107036] N82-18076

TRAINING ANALYSIS

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

DOT/FAA Human Factors Workshop on Aviation. Transcript, volume 2
[AD-A107803] N82-17877

TRAINING DEVICES

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

TRAINING EVALUATION

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

Training of information specialists
[PB82-103227] N82-18063

TRAINING SIMULATORS

Development of the Automated Performance Assessment and Remedial Training System (APARTS): A landing signal officer training aid
[AD-A106224] N82-17873

TRANSDUCERS

A durable, intermediate temperature, direct reading heat flux transducer for measurements in continuous wind tunnels
[AD-A107729] N82-17483

TRANSFER ORBITS

METEOSAT-2: TO/NSO phase operations
N82-17234

TRANSFORMATIONS (MATHEMATICS)

Fundamental order relations on regular semigroups N82-17950

Generalization of Kramers-Kronig transforms and some approximations of relations between viscoelastic quantities
[MS-1569] N82-17951

TRANSIENT RESPONSE

Problems of engine response during transient maneuvers N82-17221

TRANSITION METALS

One-electron mechanisms in organometallic chemistry N82-17262

Electrochemical investigation of solvent effects on the electrode kinetics and thermodynamics of some transition-metal redox couples N82-17284

Planar, square-pyramidal and macrocyclic transition metal complexes prepared from linear tetradentate diaminediphosphine ligands N82-17330

Substitution and excited state electron transfer reactions of transition metal complexes in organized media N82-17331

Investigation of oxide bound transition metal complexes N82-17334

Nuclear magnetic resonance studies of transition metal complexes N82-17972

A model for electrons existing in hybridized narrow and wide bands
[INPE-2127-RPE/351] N82-18042

TRANSITION PROBABILITIES

Temperature dependence of the homogeneous linewidth of the (D sub 0)-5 - (F sub 0)-7 transition of Eu-3(+) in amorphous hosts at high temperatures
[AD-A107900] N82-17375

High field NMR studies of static ordering and spin-energy coupling in MnF2 N82-18034

TRANSLATING

Intercomputer transportation of assembly language software through decompilation
[AD-A107645] N82-17881

TRANSMISSION LINES

Shielded balanced and coaxial transmission lines. Parametric measurements and instrumentation relevant to signal waveform transmission in digital service
[PB82-105297] N82-17438

Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] N82-17448

TRANSMISSIONS (MACHINE ELEMENTS)

Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

Advanced transmission component development
N82-17214

TRANSMITTANCE

Optical propagation through horizontally stratified, quasi-sinusoidal, phase gratings N82-17997

TRANSONIC COMPRESSORS

BBC/Sulzer. 4 stage transonic compressor
N82-17197

The through flow calculations N82-17199

TRANSONIC FLOW

Deviation/turning angle correlations N82-17193

Single stage transonic compressor and equivalent plane cascade N82-17196

TRANSONIC FLUTTER

A wind tunnel study of the flutter characteristics of a supercritical wing
[NLR-MP-81002-U] N82-17129

TRANSPONDERS

Cross-impact study of foreign satellite communications on NASA's 30/20 GHz program
[NASA-CR-165154] N82-17420

Preliminary Centaur systems analysis
[NASA-CR-167499] N82-17424

TRANSPORT AIRCRAFT

Systems study of transport aircraft incorporating advanced aluminum alloys
[NASA-CR-165820] N82-17153

TRANSPORT PROPERTIES

Transport characteristics of alternate slurry fuels
[DE82-003019] N82-17394

Attenuation of polybrominated biphenyls and hexachlorobenzene by Earth materials
[PB82-107558] N82-17663

Some mechanisms of calcium transport by the cardiac sarcolemma N82-17810

Graphs of anomalous energy confinement times for ASDEX, INTOR, JET, PLT, TFTR and ZEPHYR --- tokamaks
[IPP-6/200] N82-18012

TRANSPORTATION ENERGY

Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

TRAPPED PARTICLES

Graphs of anomalous energy confinement times for ASDEX, INTOR, JET, PLT, TFTR and ZEPHYR --- tokamaks
[IPP-6/200] N82-18012

TREES (MATHEMATICS)

Generalized polling algorithms for distributed systems N82-17103

TROMBE WALLS

Community solar demonstration/dissemination center
[DE82-000994] N82-17632

TROPICAL METEOROLOGY

Mean atmospheric conditions: Australian tropical operating conditions
[AD-A107904] N82-17787

TROPICAL REGIONS

Analytic modeling of severe vortical storms
[AD-A107706] N82-17785

TROPOSPHERE

Moisture stress and mid-tropospheric circulation patterns influencing the forest-prairie transition in south central United States N82-17743

The summer monsoon rains over South and East Asia and West Pacific N82-17771

TROPOSPHERIC RADIATION

Recent injections of nuclear debris in the atmosphere N82-17974

TROPOSPHERIC SCATTERING

Effects of multiple scattering and surface albedo on the photochemistry of the troposphere
[NASA-CR-168417] N82-17707

TRUCKS

Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

TUMORS

Biophysical fundamentals and instrumentation for the endovesical Nd:YAG-laser application --- tumor therapy
[MBB-UA-581-81-O] N82-17843

TUNGSTEN

Development of W-Ta generator
[NASA-CR-167477] N82-17300

TUNING

Quantification of psychoacoustic tuning curve sharpness: An analysis of frequency resolution in children and adults N82-17857

TURBINE BLADES

Method for calculating three-dimensional flow in bladed turbomachine by using arbitary quasi perpendicular intersecting planes
[AD-A106475] N82-17467

TURBINE ENGINES

Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

Development test programs adapted to helicopter engines N82-17205

The influence of new turbine technologies on their components N82-17210

Helicopter air inlets N82-17217

TURBINES

Roll up model for rotor wake vortices, part 5
[ASRL-TR-194-4] N82-17127

TURBOCOMPRESSORS

Through flow calculations in axial turbomachines
[AGARD-AR-175] N82-17178

Survey on diffusion factors and profile losses
N82-17186

End-wall boundary layer calculation methods
N82-17188

Correlation for secondary flows and clearance effects N82-17189

Effects of Reynolds number and turbulence level on axial cascade performance N82-17190

Axial compressor stall and surge N82-17194

Summary of answers to the questionnaire
N82-17195

Single stage transonic compressor and equivalent plane cascade N82-17196

BBC/Sulzer. 4 stage transonic compressor
N82-17197

Results of calculations N82-17198
The through flow calculations N82-17199
Axial-flow turbomachine through flow calculation methods N82-17201
Blade-to-blade computations and boundary layer corrections in axial compressors and turbines N82-17202

TURBOFAN ENGINES
Tests of a D vented thrust deflecting nozzle behind a simulated turbofan engine
[NASA-CR-3506] N82-17122
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] N82-17174
Damage tolerant design for cold-section turbine engine disks
[AD-A107863] N82-17176

TURBOSHAFTS
Design Criteria of the A 129 helicopter drive system N82-17215

TURBULENCE
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190

TURBULENT BOUNDARY LAYER
Turbulent boundary layer heat transfer experiments: Convex curvature effects including introduction and recovery
[NASA-CR-3510] N82-17488
The coherent structure of turbulent mixing layers. 1: Similarity of the primary vortex structure. 2: Secondary streamwise vortex structure
[AD-A108049] N82-17485

TURBULENT DIFFUSION
Effects of multiple scattering and surface albedo on the photochemistry of the troposphere
[NASA-CR-168417] N82-17707

TURBULENT FLOW
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor --- Entrainment Stretching Coherence Interdiffusion Moving Observer (ESCIMO)
[HTS/79/14] N82-17470

TURBULENT HEAT TRANSFER
The dynamics of microprocesses and current turbulent heating of ions in Uragan-2 stellarator
[IPPJ-548] N82-18008

TURBULENT MIXING
The coherent structure of turbulent mixing layers. 1: Similarity of the primary vortex structure. 2: Secondary streamwise vortex structure
[AD-A108049] N82-17485

TWO DIMENSIONAL FLOW
Effects of Reynolds number and turbulence level on axial cascade performance N82-17190
Two-dimensional interaction of ion-acoustic solitons N82-17969

TWO PHASE FLOW
A general purpose computer program for multidimensional one and two phase flow
[NTS/81/11] N82-17458
Density measurements in gas particle flows
[VKI-TM-32] N82-17471

TWO STAGE TURBINES
The two stage aero engine turbine N82-17183

TYPHOONS
World Weather Watch Tropical Cyclone Program. Typhoon operational experiment (Topex): Automatic weather stations for tropical cyclone areas --- systems design and operation
[WMO-570] N82-17790

U

U.S.S.R.
Commentary on Soviet-French Aureole-3 satellite N82-17236
Commentary on Intercosmos-Bulgaria 1300 satellite N82-17237
Further commentary on Intercosmos-Bulgaria 1300 satellite N82-17238
Status of space biomedical programs N82-17239
Institute director discusses KRT-10 and other space antennas N82-17240

ULTRASONIC FLAW DETECTION
Defect detection and identification in Si3N4 and SiC using controlled reluctance electromagnetic test methods
[AD-A107726] N82-17369

ULTRASONIC TESTS
The ultrasonic inspection of C.F.C. --- carbon fiber sine wave spars
[MDR-0485] N82-17513
Informativeness of ultrasonic Doppler cardiography in evaluation of coronary circulation N82-17828

ULTRASONIC WAVE TRANSDUCERS
Impedance matching for long cables carrying ultrasonic signals
[AD-A107935] N82-17444
Detection and mapping of insoluble sinking pollutants
[PB82-105585] N82-17674

ULTRASONICS
Activities report of the Antennas, Propagation and Digital Image-Processing Group: Research in progress N82-17425
Ultrasonic and mechanical characterizations of fatigue states of graphite epoxy composite laminates
[NASA-CR-3504] N82-17514

ULTRAVIOLET SPECTRA
Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053

UNDERGROUND EXPLOSIONS
Mechanical Engineering Department technical review
[DE82-000303] N82-17509
Detection, location and identification of explosions and earthquakes using regional seismic data recorded at a single station
[AD-A107587] N82-17719

UNDERGROUND STORAGE
Development of a man and supply hoisting system for underground metal and nonmetal mines, volume 1
[PB82-113366] N82-17583

UNDERWATER ACOUSTICS
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] N82-17566
Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results N82-17735
The reverberation and absorption characteristics of a water-filled chamber with and without a pressure-release wall lining
[AD-A107876] N82-17960

UNDERWATER OPTICS
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] N82-17566

UNDERWATER PHOTOGRAPHY
Underwater flow visualization methods in the upper layer of the ocean
[AD-A107919] N82-17801

UNITED STATES OF AMERICA
Minerals yearbook, 1978-79. Volume 2: Area reports, Domestic
[PB82-105246] N82-17596
Computer science and technology: An assessment and forecast of ADP in the Federal government
[PB82-116112] N82-17883

UNIVERSE
Origin of the initial inhomogeneities of the universe
[REPT-652] N82-18090

UNIVERSITY PROGRAM
NASA's University Program: Active projects, fiscal year 1981
[NASA-TM-84416] N82-18055

UNSTEADY FLOW
Theory and experiment in unsteady aerodynamics
[NLR-MP-80046-U] N82-17128
Program FINSUP: Steady and unsteady supersonic flow in cascades by a finite element method
[PB82-114612] N82-17472

UPGRADING
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] N82-17402
Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410
Solderability improvements for drag soldered PWBs
[DE82-000961] N82-17446

URBAN DEVELOPMENT
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591
Urban decentralization and the role of public transportation
[PB82-114844] N82-18079
Urban decentralization and the role of public transportation. Executive summary
[PB82-114836] N82-18080

URBAN PLANNING
Noise impact on communities from aircraft
[GPO-80-617] N82-17655
Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1981
[PUB-LAW-96-526] N82-18065

URBAN TRANSPORTATION
Initial interface standards for rapid transit car subsystem components
[PB82-104704] N82-18074
Operating costs and characteristics of minibuses
[PB82-107036] N82-18076
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks
[PB82-108523] N82-18078
Urban decentralization and the role of public transportation
[PB82-114844] N82-18079
Urban decentralization and the role of public transportation. Executive summary
[PB82-114836] N82-18080

URINE
Comparative evaluation of antimicrobial activity of some urine preservatives N82-17830

USER MANUALS (COMPUTER PROGRAMS)
Advanced space system analysis software. Technical, user, and programmer guide
[NASA-CR-166798] N82-17256
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] N82-17631
User's guide for SKETCH
[NASA-TM-81369] N82-17678

USER REQUIREMENTS
Functional documentation. A practical aid to the orderly solution of the system design problem N82-17098
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] N82-17562
Federal requirements for a Federal information processing standards data dictionary system
[PB82-117807] N82-18060
NASA technology utilization program: The small business market
[NASA-CR-168447] N82-18069

UTILITIES
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] N82-17635

UTILIZATION
Prospects for materials (plastics, elastomers, paints). Volume 5: Paints
[CETIM-12-B-194-VOL-5] N82-17386
Prospects for materials (plastics, elastomers, paints). Volume 6: Elastomers
[CETIM-12-B-194-VOL-6] N82-17387

V

V/STOL AIRCRAFT
Scale-model studies for the improvement of flow patterns of a low-speed tunnel
[NASA-CR-169413] N82-17226
VTOL/STOL visual study
[NASA-CR-166292] N82-17872

VACUUM
Electron temperature evolution and macroscopic size of a vacuum spark discharge plasma N82-18028

VACUUM CHAMBERS
Development status of the 'Adhesion of Metals' experiment and of the UHV Chamber facility
[CISE-1700] N82-17336

VALUE ENGINEERING
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] N82-17611

VAN DE GRAAFF ACCELERATORS
Small sample assay station users guide
[LA-8731-M] N82-17485
VANADIUM COMPOUNDS
The Fermi surface reconstructed momentum density of V3Si from positron annihilation experiments
N82-18039
VAPOR DEPOSITION
An experimental study of airfoil icing characteristics
[NASA-TM-82790] N82-17083
VAPOR PHASES
Singlet-delta molecular oxygen as a tool for selective chemiluminescent detection in chromatography
N82-17285
Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302
An equation of state for fluid ethylene
[PB82-107873] N82-17325
Crystal growth from the vapor phase experiment MA-085, section 7
[NASA-CR-161965] N82-18043
VAPORIZERS
Evaluation of alternatives in downhole steam generation
[DE82-001943] N82-17574
VAPORS
Modification of spill factors affecting air pollution. Volume 1: An evaluation of cooling as a vapor mitigation procedure for spilled volatile chemicals
[PB82-108382] N82-17657
Modification of spill factors affecting air pollution. Volume 2: The control of the vapor hazard from spills of liquid rocket fuels
[PB82-108390] N82-17658
VARIABILITY
Performance of activated sludge processes: Reliability, stability and variability
[PB82-109604] N82-17689
Tidal variability in the current and temperature fields on the Southern California continental shelf
N82-17797
VARIABLE GEOMETRY STRUCTURES
An investigation of dynamic-analysis methods for variable-geometry structures
[NASA-CR-167498] N82-17522
VARIABLE STARS
High energy X-ray observations of CYG X-3 from from OSO-8: Further evidence of a 34.1 day period
[NASA-TM-83862] N82-18085
VARIANCE (STATISTICS)
Hypothesis testing in contingency tables with small samples N82-17946
Statistical properties of MHD fluctuations associated with high speed streams from HELIOS 2 observations
[IPS-81-5] N82-18117
VARIATIONS
Power fluctuations: Technical and statistical aspects N82-17622
Evolutionary variations of solar luminosity
N82-18112
VECTOR SPACES
Dual convex cones of order restrictions with applications
[AD-A108128] N82-17908
VECTORS (MATHEMATICS)
Acoustic intensity vectors from an infinite plate with line attachments
[AMTE(N)-TM-81086] N82-17958
VEGETATION GROWTH
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] N82-17594
Addition of radiocarbon to the mixed-layers of two small lakes: Primary production, gas exchange, sedimentation and carbon budget N82-17600
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] N82-17690
VELOCITY DISTRIBUTION
Roll up model for rotor wake vortices, part 5
[ASRL-TR-194-4] N82-17127
The two stage aero engine turbine N82-17183
Hannover Turbine. Geometry, test data and sample calculation N82-17185
End-wall boundary layer calculation methods
N82-17188
Stratigraphy of the western North Atlantic based on the study of reflection profiles and DSDP results
N82-17735
VELOCITY MEASUREMENT
Non-steady velocity measurement of the wake of a helicopter rotor at low advance ratios
[AD-A107722] N82-17133
A velocity vector measuring system with 13 asymmetric wedge type yawmeters --- measuring flow distribution around the empennage of STOL models
[NAL-TR-674] N82-17477
Development and laboratory testing of a thermal emission velocimeter for application to an erosion nose tip test facility
[AD-A107713] N82-17482
Components in the interstellar medium
N82-18094
VENTILATION
Thermally-induced ventilation applications in atria: A state-of-the-art report
[DE82-001086] N82-17406
Community solar demonstration/dissemination center
[DE82-000994] N82-17632
VENUS (PLANET)
Three-dimensional shape and position of Venus's bow shock
[REPT-656] N82-18102
VERTICAL AIR CURRENTS
Optimal dolphin hang glider flight N82-17157
VERTICAL MOTION SIMULATORS
VTOL/STOL visual study
[NASA-CR-166292] N82-17872
VERY LONG BASE INTERFEROMETRY
Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] N82-17708
VERY LOW FREQUENCIES
WKB mode summing program for dipole antennas of arbitrary orientation and elevation for VLF/LF propagation. Calculation of VLF/LF field strengths in the earth-ionosphere waveguide
[AD-A107683] N82-17435
VHF OMNIRANGE NAVIGATION
Investigation of Wilcox model 585B very high frequency omnidirectional radio range (VOR) system, part 3
[AD-A107855] N82-17149
VIBRATION
An evaluation of helicopter noise and vibration ride qualities criteria
[NASA-TM-83251] N82-17871
VIBRATION MODE
A wind tunnel study of the flutter characteristics of a supercritical wing
[NLR-MP-81002-U] N82-17129
VIBRATION TESTS
An investigation of the early detection of defects in ball bearings by the vibration monitoring
[NAL-TR-675] N82-17504
VIBRATIONAL SPECTRA
Vibrational circular dichroism studies in the carbon-hydrogen and carbon-deuterium stretching regions N82-17294
VIBRATORY LOADS
SPAR reference manual update SPAR level 15
[NASA-CR-161967] N82-17520
VINYL POLYMERS
Secondary ion mass spectrometry of chemically bound organosilane films and plasma polymerized vinylferrocene films on conductive and semiconductive substrates N82-17282
Synthesis of fungicidal vinyl and acrylic latices by emulsion polymerization
[AD-A107848] N82-17372
VINYLIDENE
Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %)
[AD-A107809] N82-17378
Structural and dielectric investigation on the nature of the transition in a copolymer of vinylidene flouride and trifluoroethylene (54/46 Mol %)
[AD-A107846] N82-17379
VISCOELASTICITY
Generalization of Kramers-Kronig transforms and some approximations of relations between viscoelastic quantities
[MS-1569] N82-17951
VISCOSITY
Kinematic thermal models of the Earth's mantle
N82-17740
VISCOUS FLUIDS
High pressure nuclear magnetic resonance studies of viscous fluids N82-17289
VISUAL DISCRIMINATION
VTOL/STOL visual study
[NASA-CR-166292] N82-17872
VITAMINS
Particular features of conditioned electrodefensive reflex in white rats on background of constant magnetic field N82-17851
VLASOV EQUATIONS
Vertical coherent instabilities in bunched particle beams N82-17968
VOLATILITY
Assessment of oil production volatile organic compound sources
[PB82-108176] N82-17664
VOLCANOES
Stratospheric CCN sampling program --- volcanology, Mount Saint Helens
[NASA-CR-168396] N82-17706
Change of global climate during recent 100 years
N82-17775
VOLTERRA EQUATIONS
Stability analysis of numerical methods for Volterra integral equations with polynomial convolution kernels
[MC-NW-109/81] N82-17917
VOLUMETRIC ANALYSIS
An investigation of the high rate volumetric properties of snow
[AD-A108032] N82-17569
VORTEX GENERATORS
Experimental study of delta wing leading-edge devices for drag reduction at high lift --- conducted in Langley 7- by 10-foot high speed tunnel N82-17125
VORTICES
Roll up model for rotor wake vortices, part 5
[ASRL-TR-194-4] N82-17127
Finite difference computation of the conical flow field over a delta wing
[VKI-TN-140] N82-17135
The coherent structure of turbulent mixing layers. 1: Similarity of the primary vortex structure. 2: Secondary streamwise vortex structure
[AD-A108049] N82-17465
Streamwise vorticity decay downstream of a three dimensional protuberance
[AD-A108080] N82-17466
VORTICITY
Roll up model for rotor wake vortices, part 5
[ASRL-TR-194-4] N82-17127
VOYAGER 2 SPACECRAFT
Evidence for a distant (8700 R sub J) Jovian magnetotail: Voyager 2 observations
[NASA-TM-83861] N82-18106
VULCANIZING
US Naval fleet aircraft corrosion N82-17350

W

WALL FLOW
End-wall boundary layer calculation methods
N82-17188
WALL PRESSURE
A new method of estimating the lateral wall effect on the airfoil incidence due to the suction at side walls
[NAL-TR-680] N82-17123
WALLS
The seismic resistant design of R/C coupled structural walls
[PB82-113358] N82-17417
WARHEADS
Analysis methods for predicting structural response to projectile impact N82-17162
WARNING SYSTEMS
Active beacon collision avoidance logic evaluation. Volume 2: Collision avoidance (BCAS) threat phase
[AD-A107805] N82-17148
A hazardous materials spill warning system
[PB82-108424] N82-17665
WASHINGTON
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774

WASTE DISPOSAL
Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652
Attenuation of polybrominated biphenyls and hexachlorobenzene by Earth materials
[PB82-107558] N82-17663
Assessment of oil production volatile organic compound sources
[PB82-108176] N82-17664
Evaluation of a treatment lagoon for combined sever overflow
[PB82-105214] N82-17671
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] N82-17672
Production engineering and marketing analysis of the rotating disk evaporator
[PB82-101676] N82-17676
Sea grant maritime heritage series: The bight of the big apple
[PB82-119439] N82-17685
Solid waste data: A compilation of statistics on solid wasts management within the United States
[PB82-107301] N82-17688
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] N82-17690
NATO-CCMS pilot study on disposal of hazardous wastes. Project: Thermal treatment. Project leader: Federal Republic of Germany
[PB82-114521] N82-17691
NATO-CCMS pilot study on disposal of hazardous wastes: Chemical, physical, and biological treatment of hazardous wastes in NATO countries. Project leader: United States
[PB82-114539] N82-17692
NATO-CCMS pilot study on disposal of hazardous wastes. Project: Landfill research. Project leader: Canada
[PB82-114547] N82-17693
NATO-CCMS pilot study on disposal of hazardous wastes: Metal finishing wastes. Project leader: France
[PB82-114554] N82-17694
Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806

WASTE TREATMENT
Investigation of in-situ gelation to control emissions from abandoned hazardous waste sites
[PB82-103508] N82-17409
Dewatering Florida phosphatic clay wastes with moving screens
[PB82-104373] N82-17596
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-108440] N82-17666
Survey and evaluation of fine bubble dome diffuser aeration equipment
[PB82-105578] N82-17673
Demonstration physical chemical sewage treatment plant utilizing biological nitrification
[PB82-101643] N82-17675
Production engineering and marketing analysis of the rotating disk evaporator
[PB82-101676] N82-17676
Solid waste data: A compilation of statistics on solid waste management within the United States
[PB82-107301] N82-17688
NATO-CCMS pilot study on disposal of hazardous wastes: Chemical, physical, and biological treatment of hazardous wastes in NATO countries. Project leader: United States
[PB82-114539] N82-17692
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] N82-18070
Urban stormwater management and technology: Case study in San Francisco
[PB82-105594] N82-18081

WASTE UTILIZATION
Development of methods for the stabilization of pyrolytic oils
[PB82-108150] N82-17321
Solid waste data: A compilation of statistics on solid waste management within the United States
[PB82-107301] N82-17688

WASTE WATER
Granular activated carbon installations
[PB82-102492] N82-17659
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-108440] N82-17666

WASTES
Determination of volatile organics in industrial and municipal wastewaters
[PB82-119090] N82-17320
Development of methods for the stabilization of pyrolytic oils
[PB82-108150] N82-17321

WATER
An airline view of the corrosion problem
N82-17352
The experience of corrosion on French military aerodynes N82-17355
Oxide formation inside a cyclically loaded crack and its effect on environmental enhanced crack growth rate in 93 C water
[CISE-1705] N82-17527
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] N82-17555
Cone penetrometer and liquid limit
[PB82-113507] N82-17724

WATER CONSUMPTION
Before the well runs dry: A handbook for designing a local water conservation plan
[PB82-105826] N82-17580

WATER FLOW
Potential effects of urbanization on peak flows in Rattlesnake Creek, Missoula County, Montana
[PB82-102583] N82-17591
Streamflow assessment for counties
[PB82-102450] N82-17592
Evaluation of a treatment lagoon for combined sever overflow
[PB82-165214] N82-17671
Extension of the soil conservation service rainfall-runoff methodology for ungaged watersheds
[PB82-111394] N82-17680
Impact of Canadian power plant development and flow apportionment on the Poplar River Basin
[PB82-111618] N82-17681
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774

WATER MANAGEMENT
The significance of tropical cyclone rainfall in the water supply of south Florida N82-17547
Before the well runs dry: A handbook on drought management
[PB82-105818] N82-17579
Before the well runs dry: A handbook for designing a local water conservation plan
[PB82-105826] N82-17580
Cumberland River Basin; regional water and land resources plan
[PB82-111501] N82-17585
Water quality simulation in Wahiawa reservoir, O'Ahu, Hawaii
[PB82-108499] N82-17588
The nature of drought and strategies to reduce its effects N82-17770
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] N82-18070

WATER POLLUTION
Determination of volatile organics in industrial and municipal wastewaters
[PB82-119090] N82-17320
Removing water-soluble hazardous material spills from waterways with carbon
[PB82-103813] N82-17661
Investigation of petroleum in the marine environs of the Strait of Juan de Fuca and Northern Puget Sound, part 2 (second-year continuation)
[PB82-104290] N82-17662
A hazardous materials spill warning system
[PB82-108424] N82-17665
Performance testing of the DiPerna sweeper
[PB82-109174] N82-17668
Detection and mapping of insoluble sinking pollutants
[PB82-105586] N82-17674
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] N82-17678
Sea grant maritime heritage series: The bight of the big apple
[PB82-119439] N82-17685
Nearshore marine trace metal geochemistry
[PB82-109372] N82-17804
Brine disposal in the Gulf of Mexico: Projected impacts for West Hackberry based on Bryan Mound experience
[PB82-109513] N82-17806
Urban stormwater management and technology: Case study in San Francisco
[PB82-105594] N82-18081

WATER QUALITY
Cumberland River Basin; regional water and land resources plan
[PB82-111501] N82-17585
Nitrogen in ground water and surface water from sewered and unsewered areas, Nassau County, Long Island, New York
[PB82-109885] N82-17586
Water resources data for Utah, water year 1980
[PB82-108606] N82-17587
Water quality simulation in Wahiawa reservoir, O'Ahu, Hawaii
[PB82-108499] N82-17588
Manual of ground-water quality sampling procedures
[PB82-103045] N82-17660
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] N82-17678

WATER RECLAMATION
Assay of dissolved carbon in reclaimed water produced in spacecraft water supply systems
N82-17838

WATER RESOURCES
Dredging management: Data and analysis for the New England/Long Island Sound region
[PB82-111626] N82-17412
Water for non-nuclear energy development in the Great Basin
[PB82-116781] N82-17581
Cumberland River Basin; regional water and land resources plan
[PB82-111501] N82-17585
Water resources data for Utah, water year 1980
[PB82-108606] N82-17587
Water quality simulation in Wahiawa reservoir, O'Ahu, Hawaii
[PB82-108499] N82-17588
Streamflow assessment for counties
[PB82-102450] N82-17592
The Delaware River Basin comprehensive (level B) study
[PB82-111477] N82-17679
Impact of Canadian power plant development and flow apportionment on the Poplar River Basin
[PB82-111618] N82-17681
Great Lakes environmental planning study
[PB82-112970] N82-17682
Proceedings of the Technical Conference on Climate: Asia and Western Pacific
[WMO-578] N82-17747
Climate, climate data, and water resources
N82-17758

WATER RUNOFF
Streamflow assessment for counties
[PB82-102450] N82-17592

WATER TABLES
Digital model of the unconsolidated aquifer system in the Modesto area, Stanislaus and San Joaquin Counties, California
[PB82-102559] N82-17593

WATER TREATMENT
Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652
Granular activated carbon installations
[PB82-102492] N82-17659
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-108440] N82-17666
Survey and evaluation of fine bubble dome diffuser aeration equipment
[PB82-105578] N82-17673
Demonstration physical chemical sewage treatment plant utilizing biological nitrification
[PB82-101643] N82-17675

Production engineering and marketing analysis of the rotating disk evaporator
[PB82-101676] N82-17676

WATER VAPOR
Evaluation of alternatives in downhole steam generation
[DE82-001943] N82-17574
Analysis of the atmospheric water vapor transport and hydrologic cycle simulated in a global circulation model N82-17696
An analysis of Wangara micrometeorology: Surface stress, sensible heat, evaporation, and dewfall
[PB82-114190] N82-17793

WATER WAVES
Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] N82-17802
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] N82-17805

WATERPROOFING
Recent developments in materials and processes for aircraft corrosion control N82-17361

WATERSHEDS
Watershed model study using LANDSAT data
N82-17602
Extension of the soil conservation service rainfall-runoff methodology for ungaged watersheds
[PB82-111394] N82-17680
Hydrogeochemistry and kinetics of silicate weathering in a Gabbroic watershed: Filson Creek, northeastern Minnesota N82-17695
Yakima (Washington) streamflow forecast study: The impact of an erroneous forecast N82-17774

WAVE AMPLIFICATION
Commutated automatic gain control system
[NASA-CR-168440] N82-17140

WAVE DEGRADATION
On L sub p-decay and scattering for nonlinear Klein-Gordon equations
[CTH-MATH-1981-17] N82-17929

WAVE EQUATIONS
Complex root-finding program with application to the dispersion relation of waves propagating in a fluid loaded plate
[AD-A107631] N82-17907
Probabilistic treatment of relativistic scattering of scalar particles and their mass spectrum
N82-1799[illegible]

WAVE FRONTS
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] N82-17798

WAVE INTERACTION
Two-dimensional interaction of ion-acoustic solitons N82-17969

WAVE PROPAGATION
Analytical representation of Atlas I (Trestle)
[AD-A107674] N82-17433

WAVEFORMS
Shielded balanced and coaxial transmission lines. Parametric measurements and instrumentation relevant to signal waveform transmission in digital service
[PB82-105297] N82-17438
Effect of record length on the correlation of complex exponentials
[AD-A107738] N82-17911

WEAR
Microstructural effects in abrasive wear
[DE82-003653] N82-17339

WEAR TESTS
Corrosion fatigue behaviour of some aluminium alloys N82-17345
Flight-by-flight corrosion fatigue tests N82-17348

WEATHER
Report of the second session of the Joint Scientific Committee N82-17720
The stability of yields in Shanghai and the climatic conditions N82-17761
Study of climate and its applied aspects
N82-17766
The provision of climatic information for agriculture in the USSR N82-17767
On possible impacts of climatic variations on agriculture in China N82-17768
Climate circulation processes in South-East Asia during winter monsoon N82-17769

WEATHER FORECASTING
Aircraft icing avoidance and protection
[PB82-109135] N82-17139
A system for crop/climate assessment using meteorological and satellite data N82-17752
The summer monsoon rains over South and East Asia and West Pacific N82-17771
Further studies on the climatic change during historical times in China N82-17776
Large-scale oceanographic variations in the western North Pacific N82-17778
Public requirements for weather information and attitudes concerning weather service
[PB82-109117] N82-17791
Meteorological settings associated with significant convective storms in Colorado
[PB82-106236] N82-17795

WEATHER STATIONS
Meteorological services in agronomic and economic evaluations of risk N82-17760

WEATHERING
Corrosion fatigue of offshore and ship-building steels N82-17346

WEBS (SHEETS)
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] N82-17611

WEIBULL DENSITY FUNCTIONS
Strength evaluation test of pressureless-sintered SiC and reaction-sintered Sisub3Nsub4 at room temperature
[NAL-TR-678] N82-17368

WEIGHT MEASUREMENT
Specifications, tolerances, and other technical requirements for weighing and measuring devices, 1982 edition
[PB82-113952] N82-17487

WEIGHTING FUNCTIONS
Weighting of distances in factorial analysis
[ENST-C-81005] N82-17543
A simple heuristic approach to simplex efficiency
[AD-A107913] N82-17915

WEIGHTLESSNESS
Status of space biomedical programs N82-17239
Quantitative determination of zero-gravity effects on electronic materials processing germanium crystal growth with simultaneous interface demarcation experiment MA-060, section 5
[NASA-CR-161964] N82-18044

WEIGHTLESSNESS SIMULATION
Combined effect of simulated weightlessness and accelerations on energy metabolism enzymes
N82-17820

WELDED JOINTS
Corrosion fatigue of offshore and ship-building steels N82-17346

WHITE DWARF STARS
A photometric search for white dwarfs in intermediate-age open clusters N82-18084

WHITE HOLES (ASTRONOMY)
Electric charge in the Kruskal space-time and the Jeans conjecture
[REPT-653] N82-18091

WHITE NOISE
A study of the acoustic reflex as elicited by selected environmental noise stimuli N82-17858

WIDEBAND COMMUNICATION
Cross-impact study of foreign satellite communications on NASA's 30/20 GHz program
[NASA-CR-165154] N82-17420

WIGGLER MAGNETS
Note on planar undulator wiggler single electron motion
[AD-A108051] N82-17493

WIND (METEOROLOGY)
Meteorological products and some applications of Global Meteorological Satellite (GMS) data
N82-17751

WIND DIRECTION
Meteorological data basis N82-17618
Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] N82-17802

WIND EFFECTS
Optimal dolphin hang glider flight N82-17157
Variations in the thermal structure and wind field occurring in the western Indian Ocean during the monsoons
[AD-A107761] N82-17800

WIND TUNNEL APPARATUS
Tubing systems for the measurement of fluctuating pressures in wind engineering
[OUEL-1370/81] N82-17231
A durable, intermediate temperature, direct reading heat flux transducer for measurements in continuous wind tunnels
[AD-A107729] N82-17483

WIND TUNNEL CALIBRATION
Model size and humidity effects on selected calibration parameters for the 16-ft transonic wind tunnel at AEDC
[AD-A107728] N82-17230

WIND TUNNEL TESTS
Experimental verification of an aerodynamic parameter optimization program for wind tunnel testing
[AD-A107727] N82-17134
Wind tunnel tests of the Space Shuttle foam insulation with simulated debonded regions
[AD-A108079] N82-17250
NASA/Rockwell International Space Shuttle orbiter yaw heating test (OH-109)
[AD-A107703] N82-17251
A velocity vector measuring system with 13 asymmetric wedge type yawmeters --- measuring flow distribution around the empennage of STOL models
[NAL-TR-674] N82-17477

WIND VARIATIONS
Forecasting wind power output N82-17623
Climatic influences of residential energy consumption N82-17742

WIND VELOCITY
Meteorological data basis N82-17618
Forecasting wind power output N82-17623

WINDMILLS (WINDPOWERED MACHINES)
Stress analysis and test philosophy for wind energy converter blades
[NBB-UD-300-80-O] N82-17536
Static and dynamic investigations of different towers for wind turbines
[ISD-274] N82-17637
Rotor model for the verification of computational methods
[ISD-275] N82-17638
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] N82-17639
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] N82-17642

WINDOWS (APERTURES)
Enhancement of poles in spectral analysis
[AD-A107739] N82-17432

WINDPOWER UTILIZATION
Implementing agreement for a program of research and development on wind energy conversion systems
[JUEL-SPEZ-108] N82-17617
Meteorological data basis N82-17618
Assessment of technical potential: Problems, methods and results N82-17619
Economic evaluation N82-17620
Assessment of the potential of LWECS in the Netherlands N82-17621
Power fluctuations: Technical and statistical aspects N82-17622
Forecasting wind power output N82-17623
Assured load carrying capability and capacity credit N82-17624
Possibilities for avoiding strong variations of the electrical output power of wind energy systems
N82-17625
Meteorological aspects of the utilization of wind as an energy source
[WMO-575] N82-17646
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan N82-17753

WINDPOWERED GENERATORS
Implementing agreement for a program of research and development on wind energy conversion systems
[JUEL-SPEZ-108] N82-17617

Assessment of the potential of LWECS in the Netherlands N82-17821

Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] N82-17643

Meteorological aspects of the utilization of wind as an energy source
[WMO-575] N82-17646

WING CAMBER

Experimental trim drag values for conventional and supercritical wings
[NASA-CR-168500] N82-17126

WING PLANFORMS

Blade planform for a quiet helicopter
[NASA-CR-166256] N82-17121

WING SLOTS

Experimental study of delta wing leading-edge devices for drag reduction at high lift --- conducted in Langley 7- by 10-foot high speed tunnel N82-17125

WINGS

Theory and experiment in unsteady aerodynamics
[NLR-MP-80046-U] N82-17128

Analysis of the curved junction edge between a flat plate and a prolate spheroid
[AD-A106543] N82-17130

Experimental verification of an aerodynamic parameter optimization program for wind tunnel testing
[AD-A107727] N82-17134

WINTER

Climate circulation processes in South-East Asia during winter monsoon N82-17769

Regionality of climatic change in monsoon Asia N82-17777

WORD PROCESSING

A survey of standardization efforts of coded character sets for text processing
[PB82-105891] N82-18061

WRIST

Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

X

X RAY ANALYSIS

Pixe and its application to the element analysis of Milan air particulate matter
[CISE-1685] N82-17656

X RAY DIFFRACTION

Crystalline forms in a copolymer of vinylidene fluoride and trifluoroethylene (52/48 Mol %)
[AD-A107809] N82-17378

X RAY SOURCES

High energy X-ray observations of CYG X-3 from from OSO-8: Further evidence of a 34.1 day period
[NASA-TM-83862] N82-18085

The role of cyclotron resonance processes in the spectra of accreting neutron stars
[ISSN-0340-8922] N82-18099

X RAY SPECTRA

Mechanical Engineering Department technical review
[DE82-000303] N82-17509

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm N82-17601

X RAY SPECTROSCOPY

High energy X-ray observations of CYG X-3 from from OSO-8: Further evidence of a 34.1 day period
[NASA-TM-83862] N82-18085

Solar X-ray flares: Spectroscopic results from the eighth Orbiting Solar Observatory and the development of a Space Shuttle Borne Polarimeter N82-18109

X RAYS

Development of high sensitivity X-ray and electron-beam resist processes
[AD-A107833] N82-17374

Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments
[INPE-2119-RPE/343] N82-17711

Y

YAW

NASA/Rockwell International Space Shuttle orbiter yaw heating test (OH-109)
[AD-A107703] N82-17251

A velocity vector measuring system with 13 asymmetric wedge type yawmeters --- measuring flow distribution around the empennage of STOL models
[NAL-TR-674] N82-17477

Z

ZEEMAN EFFECT

Zeeman background correction with an electrothermal graphite braid atomizer N82-17275

Quantum beats in photoionization current N82-18031

ZINC

On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116708] N82-17725

ZINC OXIDES

Electronic structure of grain boundaries and interfaces in polycrystalline zinc oxide
[AD-A107884] N82-18048

ZINC-BROMIDE BATTERIES

Development of zinc-bromine batteries for utility energy storage
[DE82-002114] N82-17836

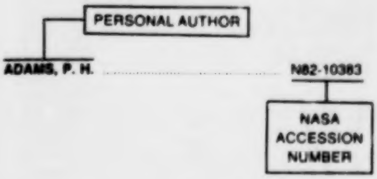
ZINCBLENDE

Geology and geochemistry of sphalerite in coal N82-17702

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 8

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

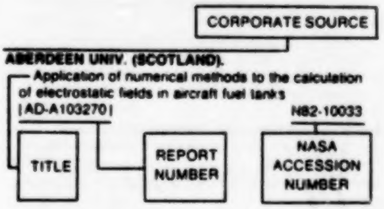
CORPORATE SOURCE INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 8

Typical Corporate Source Index Listing



CORPORATE SOURCE
ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270]
N82-10033
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

AARI, LENINGRAD (USSR).

Ocean influence on climate formation and changes N82-17780

ACADEMY OF SCIENCE OF WATER CONSERVANCY AND ELECTRIC POWER, BEIJING (CHINA).

Analysis of drought occurrence and long-term variation of annual streamflow in eastern regions of China N82-17772

ACADEMY OF SCIENCES (USSR), MOSCOW.

The plasma ion composition in the high-latitude magnetospheric boundary layer according to Prognoz-7 data
[REPT-658] N82-17697

Effect of capturing of hard photons by strong magnetic field and the role it may play in pulsars
[REPT-663] N82-18088

Dust-like stages in the early universe and the restrictions on the primordial black hole spectrum
[REPT-646] N82-18089

Origin of the initial inhomogeneities of the universe
[REPT-652] N82-18090

Electric charge in the Kruskal space-time and the Jeans conjecture
[REPT-653] N82-18091

Three-dimensional shape and position of Venus's bow shock
[REPT-656] N82-18102

ADMIRALTY MARINE TECHNOLOGY ESTABLISHMENT, TEDDINGTON (ENGLAND).

Acoustic intensity vectors from an infinite plate with line attachments
[AMTE(N)-TM-81086] N82-17958

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).

Tactical Airborne Distributed Computing and Networks
[AGARD-CP-303] N82-17086

Design Manual for impact damage tolerant aircraft structure
[AGARD-AG-238] N82-17160

Description of projectile threats N82-17161

Analysis methods for predicting structural response to projectile impact N82-17162

Analysis methods for ballistic damage size and type N82-17163

Damage from High explosive (HE) projectiles N82-17164

Damage from engine debris projectiles N82-17165

Hydrodynamic ram damage N82-17166

Effects of cyclic loading on projectile impact damage N82-17167

Stiffness degradation of impact damaged structure N82-17168

Strength degradation of impact damaged structure N82-17169

Analysis of multiple load path panels containing impact damage N82-17170

Through flow calculations in axial turbomachines
[AGARD-AR-175] N82-17178

Review of performance prediction methods N82-17179

Influence of correlations and computational methods on the prediction of overall efficiency N82-17180

Influence of correlations and computational procedures on flow field predictions N82-17181

Cambridge turbine: Geometry, test data and sample calculation N82-17182

The two stage aero engine turbine N82-17183

Ansaldo steam turbine. Geometry, test data and sample calculation N82-17184

Hannover Turbine. Geometry, test data and sample calculation N82-17185

Survey on diffusion factors and profile losses N82-17186

Survey of models for shock and shock/boundary layer interaction loss prediction N82-17187

End-wall boundary layer calculation methods N82-17188

Correlation for secondary flows and clearance effects N82-17189

Effects of Reynolds number and turbulence level on axial cascade performance N82-17190

Survey on the effect of blade surface roughness on compressor performance N82-17191

Part span damper loss prediction for transonic axial fan rotors N82-17192

Deviation/turning angle correlations N82-17193

Axial compressor stall and surge N82-17194

Summary of answers to the questionnaire N82-17195

Single stage transonic compressor and equivalent plane cascade N82-17196

BBC/Sulzer. 4 stage transonic compressor N82-17197

Results of calculations N82-17198

The through flow calculations N82-17199

Evaluation of profile loss predictions based on diffusion factors N82-17200

Axial-flow turbomachine through flow calculation methods N82-17201

Blade-to-blade computations and boundary layer corrections in axial compressors and turbines N82-17202

Helicopter Propulsion Systems
[AGARD-CP-302] N82-17203

Corrosion Fatigue
[AGARD-CP-316] N82-17342

Aircraft Corrosion
[AGARD-CP-315] N82-17349

AERITALIA S.P.A., TORINO (ITALY).

Corrosion prevention methods developed from direct experience with aerospace structures N82-17359

AERODYNE RESEARCH, INC., BEDFORD, MASS.

Measurement of fluorine atom concentrations and reaction rates in chemical laser systems
[AD-A108072] N82-17435

AEROSPACE CORP., EL SEGUNDO, CALIF.

Cavity lifetime phase-shift method for sensitive reflectance measurements at mid-infrared wavelengths
[ATR-82(8448)-1] N82-17423

Plasma and electric field boundaries at high and low altitudes on July 29, 1977
[NASA-CR-165118] N82-17713

AEROSPACE CORP., LOS ANGELES, CALIF.

Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302

Develop solar fuels and chemicals technology and perform supporting systems analysis
[DE81-023960] N82-17318

AIR FORCE ACADEMY, COLO.

A new class of room temperature molten salts for battery applications
[AD-A107969] N82-17627

AIR FORCE ARMAMENT LAB., EGLIN AFB, FLA.

Optimal control and estimation for strapdown seeker guidance of tactical missiles N82-17245

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.

Antenna direction-finding characteristic
[AD-A108110] N82-17429

Defense of radio-electronic equipment
[AD-A108114] N82-17430

Method for calculating three-dimensional flow in bladed turbomachine by using arbitary quasi perpendicular intersecting planes
[AD-A108475] N82-17467

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.

Continuous reconfiguration in a multi-microprocessor flight control system N82-17093

Evaluation of several bonding parameters on the random bending fatigue life of adhesively bonded aluminum joints
[AD-A107995] N82-17533

AIR NAVIGATION SERVICES, INC., WESTERNGRUND (WEST GERMANY).

Aeronautical Information Data Subsystem (AIDS): A ground-based component of air navigation services systems N82-17150

AIRCRAFT RESEARCH AND DEVELOPMENT UNIT, EDINBURG (AUSTRALIA).

Mean atmospheric conditions: Australian tropical operating conditions
[AD-A107904] N82-17787

ALFA SIERRA URFYSIK, DARMSTADT (WEST GERMANY).

The explanation of ball lightning N82-17788

ALL-UNION RESEARCH INST. OF AGRICULTURAL METEOROLOGY, MOSCOW (USSR).

The provision of climatic information for agriculture in the USSR N82-17767

AMAX EXPLORATION, INC., WHEAT RIDGE, COLO.

Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] N82-17529

AMERICAN FARMERS' MARKETING COOPERATIVE, MAYFIELD, KY.

Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] N82-17397

AMERICAN UNIV., WASHINGTON, D. C.

Investigation of a cascade laser system: The excitations and interactions of N sub 2 in the ultraviolet and the near infrared N82-17503

A model for essential hypertension: Metabolic studies N82-17867

AMOCO OIL CO., NAPERVILLE, ILL.

Coal-liquefaction catalyst development
[DE82-000137] N82-17314

ANALYTICAL MECHANICS ASSOCIATES, INC., HAMPTON, VA.

Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 2: RNAV/MLS transition problems for aircraft
[NASA-CR-3511] N82-17142

ANDHRA UNIV., WALTAIR (INDIA).

The summer monsoon rains over South and East Asia and West Pacific N82-17771

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.

Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] N82-17648

ARGONNE NATIONAL LAB., ILL.

Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] N82-17317

Customer attitudes toward thermal-energy-storage heating
[DE82-003010] N82-17634

Possibility for energy conservation in transporting freight by truck
[DE81-030072] N82-18071

ARINC RESEARCH CORP., SANTA ANA, CALIF.

Technology overview for advanced aircraft armament system program
[AD-A107680] N82-17155

Standardization study for advanced aircraft armament system program
[AD-A107681] N82-17156

ARIZONA STATE UNIV., TEMPE.

Sulfur in the corrosion of superalloys
[AD-A107867] N82-17337

ARIZONA UNIV., TUCSON.

Investigation of spectroscopic properties of flames and plasmas via computer controlled instrumentation N82-17326

Mechanistic studies on the extraction of copper(11) by hydrophobic reagents N82-17327

Beam-foil studies of atomic mean-lives in the vacuum ultraviolet N82-17987

Corrosion fatigue behaviour of some aluminium alloys N82-17345

SOCIETE TURBOMECA, BORDES (FRANCE).

Development test programs adapted to helicopter engines N82-17205

The influence of new turbine technologies on their components N82-17210

SOUTH DAKOTA STATE UNIV., BROOKINGS.

Infiltration land treatment of stabilization pond effluent
[PB82-109919] N82-17652

SOUTHAMPTON UNIV. (ENGLAND).

Some aspects of the nonliner vibrations of a clamped-clamped aluminium beam and comparison with a carbon fiber reinforced plastic beam
[ISVR-TR-108] N82-17526

SOUTHWEST RESEARCH INST., SAN ANTONIO, TEX.

Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1: Construction of apparatus and preliminary experiments
[AD-A108018] N82-17305

Compressive strength and damage mechanisms in ceramic materials. 1: The role of subcritical tensile microfracture processes in compression failure of ceramics. 2: Electron channeling study of fracture in alumina - evidence for crack tip plasticity
[AD-A107617] N82-17371

Study of air compressor hazards in underground and surface mines
[PB82-105164] N82-17597

SPECTROLAB, INC., SYLMAR, CALIF.

Design, analysis, and test verification of advanced encapsulation systems
[NASA-CR-168407] N82-17604

Design, analysis, and test verification of advanced encapsulation systems
[NASA-CR-168406] N82-17605

SPECTRON DEVELOPMENT LABS., INC., COSTA MESA, CALIF.

Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] N82-17396

Development and laboratory testing of a thermal emission velocimeter for application to an erosion nose tip test facility
[AD-A107713] N82-17482

SQUIBB (E. R.) AND SONS, PRINCETON, N.J.

Development of W-Ta generator
[NASA-CR-167477] N82-17300

SRI INTERNATIONAL CORP., MENLO PARK, CALIF.

Hierarchical specification of the SIFT fault tolerant flight control system N82-17106

Study of fundamental chemical processes in explosive decomposition by laser-powered homogeneous pyrolysis
[AD-A108022] N82-17393

A stepped-frequency HF radar for ionospheric diagnostics
[AD-A107810] N82-17718

Computational theory of line drawing interpretation
[NASA-CR-165804] N82-17897

STANFORD UNIV., CALIF.

Use of optimization to predict the effect of selected parameters on commuter aircraft performance
[NASA-CR-168439] N82-17151

Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] N82-17448

Turbulent boundary layer heat transfer experiments: Convex curvature effects including introduction and recovery
[NASA-CR-3510] N82-17456

STATE UNIV. OF NEW YORK AT STONY BROOK.

The structural consequences of transition metal basicity: Investigation of various gold complexes N82-17332

Riemannian fibrations of Euclidean spaces N82-17903

Derivation of quasi-Newton updates for nonlinear equations and unconstrained optimization N82-17933

Vertical coherent instabilities in bunched particle beams N82-17968

Quantum beats in photoionization current N82-18031

Interacting quantum field theory in curved space-time N82-18052

Topics in ultraviolet and infrared properties of perturbative quantum field theory N82-18053

H2 emission in molecular clouds N82-18101

STICHTING MATHEMATISCH CENTRUM, AMSTERDAM (NETHERLANDS).

An underlying context-free grammar of ALGOL 68 plus
[MC-IW-171/81] N82-17891

PEP: An interactive programming system with an ALGOL-like programming language
[MC-IW-172/81] N82-17892

An operator-priority grammer for ALGOL 68 plus
[MC-IW-173/81] N82-17893

Some thoughts on a Tuple oriented programming system
[MC-IW-174/81] N82-17894

Stability analysis of numerical methods for Volterra integral equations with polynomial convolution kernels
[MC-NW-109/81] N82-17917

Smoothing and coarse grid approximation properties of multigrid methods
[MC-NW-110/81] N82-17918

Application of multigrid methods for integral equations to two problems from fluid dynamics
[MC-NW-111/81] N82-17919

On the contractivity of a complex Runge-Kutta scheme
[MC-NW-112/81] N82-17920

Rigorous high speed separation of zeros of Riemann's zeta function
[MC-NW-113/81] N82-17921

Another proof for the completeness of a rule for the fair termination of guarded commands and another rule for their just termination
[MC-IW-178/81] N82-17922

An operational semantics for bonded nondeterminism equivalent to a denotational one
[MC-IW-169/81] N82-17953

STIEBEL ELTRON G.M.B.H. UND CO. K.G., HOLTZMINDEN (WEST GERMANY).

Development of an absorption heat pump system operating with primary energy to heat apartment buildings. Dual components mixture R 22-E 181
[BMFT-FB-T-81-208] N82-17454

STOCKHOLM UNIV. (SWEDEN).

Increase of atmospheric CO2 and possible climatic changes N82-17763

STONEHART ASSOCIATES, INC., MADISON, CONN.

Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] N82-17615

STRASBOURG UNIV. (FRANCE).

Induced luminescence by charged particles on gaseous, liquid and solid argon
[CRN-CPR-80-10] N82-17316

STRATEGIC AIR COMMAND, OFFUTT AFB, NEBR.

Maintenance posture for quick start
[AD-A107553] N82-17177

STUTTGART UNIV. (WEST GERMANY).

Phase demodulator with high temporal and angular resolution for the measurement of Faraday rotation by means of a carrier frequency
[IPF-81-4] N82-17441

Investigation of D2O laser emission at 50, 66, 83, 111, and 116 microns
[IPF-81-6] N82-17502

Load capacity of notched components as derived from post-yield fracture criteria
[ISD-266] N82-17538

Static and dynamic investigations of different towers for wind turbines
[ISD-274] N82-17637

Rotor model for the verification of computational methods
[ISD-275] N82-17638

Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] N82-17639

Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] N82-17640

Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] N82-17641

Static and dynamic investigations for the model of a wind rotor
[ISD-272] N82-17642

Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] N82-17643

Microinstabilities in a radially contracting inhomogeneous cylindrical plasma slab. Part 2: Lower hybrid and electron cyclotron drift instabilities in the plasma focus
[IPF-80-13-PT-2] N82-18022

Experimental investigation of the influence of high voltages on the performance of a plasma focus
[IPF-81-2] N82-18023

Measurement of heavy ion components in a hydrogen plasma by CO2 laser scattering with coherent detection
[IPF-81-5] N82-18024

SWEDLOW, INC., GARDEN GROVE, CALIF.

Transparent polyolefin film armor
[AD-A107562] N82-17377

SYSTEMS CONTROL, INC., ANAHEIM, CALIF.

Initial assessment of selected advanced lubricating oil filters
[DE82-002420] N82-17506

SYSTEMS CONTROL, INC., PALO ALTO, CALIF.

Differential Omega system development and evaluation
[AD-A107857] N82-17146

SYSTEMS RESEARCH LABS., INC., DAYTON, OHIO.

New concepts in multifunctional corrosion for aircraft and other systems N82-17362

SYSTEMS SCIENCE AND SOFTWARE, LA JOLLA, CALIF.

Detection, location and identification of explosions and earthquakes using regional seismic data recorded at a single station
[AD-A107587] N82-17719

SYSTRAN CORP., DAYTON, OHIO.

Digital Avionics Information System (DAIS) documentation
[AD-A108000] N82-17172

T

TECHNICAL RESEARCH CENTRE OF FINLAND, ESPOO.

Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions
[VTT-88] N82-17340

TECHNICAL UNIV. OF ISTANBUL (TURKEY).

On the Corrosion problems of the TAF F-5 aircraft N82-17354

TECHNISCHE HOCHSCHULE, DARMSTADT (WEST GERMANY).

Amplitude density distribution of a sum of speech signals
[IND-FB-106] N82-17437

TECHNISCHE HOGESCHOOL, DELFT (NETHERLANDS).

Some results of numerical experiments on the computation of the Kootwijk and Wettzell satellite laser ranging station coordinates
[VTH-M-409] N82-17499

Preliminary results of Seasat orbit determinations from laser range and European Doppler range-rate observations
[VTH-M-411] N82-17500

Kalman filter satellite orbit improvement using laser ranging measurements from a single tracking station
[VTH-M-414] N82-17501

Fling-off cooling of straight spur gears
[WTHD-136] N82-17510

Past, present and future of shell stability analysis
[VTH-LR-320] N82-17537

TECHNISCHE UNIV., AACHEN (WEST GERMANY).

Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] N82-17455

TECHNISCHE UNIVERSITAET, BRUNSWICK (WEST GERMANY).

On the geology, geochemistry and genesis of the Tom Pb-Zn-barite deposit, Yukon Territory, Canada
[PB82-116708] N82-17725

TECHNISCHE UNIVERSITAET, MUNICH (WEST GERMANY).
Material on the dynamics of Earth-Moon systems: Planetary libration, fundamentals
[MITT-155] N82-18096

TENNESSEE VALLEY AUTHORITY, MUSCLE SHOALS, ALA.
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-116670] N82-17684

TEST GROUP (6585TH), HOLLOMAN AFB, N. MEXICO
Proceedings of the Tenth Biennial Guidance Test Symposium, Volume 1
[AD-A107612] N82-17147

TETRA TECH, INC., LAFAYETTE, CALIF.
Impact of Canadian power plant development and flow apportionment on the Poplar River Basin
[PB82-111618] N82-17681

TEXAS A&M UNIV., COLLEGE STATION.
Separation of gas mixtures by selective extraction
[PB82-103839] N82-17324

TEXAS INSTRUMENTS, INC., DALLAS.
Development of a solar-energy system
[DE81-030531] N82-17633

TEXAS RESEARCH INST., INC., AUSTIN.
The application of mechanical clamps to Portsmouth connectors
[AD-A107632] N82-17505

TEXAS UNIV., AUSTIN.
Streamflow assessment for counties
[PB82-102450] N82-17592

TEXAS UNIV. AT ARLINGTON.
Quasi-Newton methods converge at the golden section rate
[AD-A106663] N82-17901
A spectroscopic study of the radial velocity variations and accretion disks found in four dwarf novae
N82-18092

TEXAS UNIV. AT DALLAS.
Thermal stratification in storage tanks N82-17649
The seismicity of forearc marginal wedges (accretionary prisms) and seismotectonics of convergent margins N82-17726
Petrology of the ultramafic xenoliths on the Koolau shield, Oahu, Hawaii. Part 1: Liquidus phase relations on the join anorthite-forsterite-silica at 10 kbar, part 2 N82-17727
The biostratigraphy and taxonomy of Mesozoic radiolaria from the Samail Ophiolite and Hawasina Complex, Oman N82-17728

TEXTRON BELL HELICOPTER, FORT WORTH, TEX.
Assessment of historical and projected segments of US and World civil and military rotorcraft markets 1960 - 1990
[NASA-CR-166151] N82-17137
Correlating measured and predicted inplane stability characteristics for an advanced bearingless rotor
[NASA-CR-166280] N82-17154
Helicopter propulsion systems: Past, present and future N82-17204

THERMO ELECTRON CORP., WALTHAM, MASS.
DOE/JPL advanced thermionic technology program
[NASA-CR-168436] N82-17636

TORONTO UNIV. (ONTARIO).
Fracture mechanics based modelling of the corrosion fatigue process N82-17344

TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.
Improved tack PMR
[NASA-CR-165432] N82-17367
Analytic modeling of severe vortical storms
[AD-A107706] N82-17785
Microwave plasma source for neutral-beam injection systems
[DE81-029122] N82-18020

TRW ENVIRONMENTAL SERVICES, REDONDO BEACH, CALIF.
Feasibility of commercialized water treatment techniques for concentrated waste spills
[PB82-108440] N82-17666

TRW, INC., RESEARCH TRIANGLE PARK, N.C.
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] N82-17669

TSUKUBA UNIV. (JAPAN).
Regionality of climatic change in monsoon Asia
N82-17777

TULANE UNIV., NEW ORLEANS, LA.
Deposition and diagenesis of Glauconite Sandstone, Berrymore-Lobstick-Bigoray area, South Central Alberta: A study of physical chemistry of cementation N82-17703

U

UNION CARBIDE CORP., OAK RIDGE, TENN.
A 16 muon CO2 bending mode laser system
[DE81-030123] N82-17498

UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION, PARIS (FRANCE).
Climate, climate data, and water resources
N82-17758
Large-scale oceanographic variations in the western North Pacific N82-17778

UNITED NATIONS RESEARCH INST. FOR SOCIAL DEVELOPMENT, GENEVA (SWITZERLAND).
Food crises and famines: The UNRISD food systems approach N82-17762

UNITED TECHNOLOGIES CORP., SOUTH WINDSOR, CONN.
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] N82-17607

UNIVERSITY COLL., CARDIFF (WALES).
Organic grains and the spectrum of the galatic centre source IRS 7
[PREPRINT-58] N82-17265

UNIVERSITY OF SOUTHEASTERN MASSACHUSETTS, NORTH DARTMOUTH.
On a two-dimensional maximum entropy spectral estimation method for the texture image analysis
[AD-A107569] N82-17888

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.
Multiphoton gas phase spectroscopy
[AD-A107671] N82-17302

UPPER PLAINS STATES INNOVATION GROUP, BISMARCK, N. DAK.
Upgrading unpaved roads: Road base stabilization using lime and fly ash
[PB82-103524] N82-17410

UTAH UNIV., SALT LAKE CITY.
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] N82-17315
Satellite sounding of cloud parameters and temperature profiles in cloudy atmospheres from infrared and microwave data N82-17699
Time dependent thermal modeling of plate tectonic processes N82-17737
The masses and the electromagnetic and pion decay rates of particles containing one charmed or bottom quark N82-17961

V

VEREINIGTE FLUGTECHNISCHE WERKE G.M.B.H., BREMEN (WEST GERMANY).
Corrosion protection schemes for aircraft structures: Some examples for the corrosion behaviour of Al alloys N82-17364

VIRGINIA HIGHWAY AND TRANSPORTATION RESEARCH COUNCIL, CHARLOTTESVILLE.
Illinois method for the design of dense-graded emulsion base mixes
[PB82-103235] N82-17408

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
Control of interface reactions in SIC/TI composites
[NASA-CR-168416] N82-17266
Multicomponent continuous flow kinetic analysis
N82-17280
The electrochemical and spectrophotometric determination of free and combined chlorine
N82-17292

VON KARMAN INST. FOR FLUID DYNAMICS, RHODE-SAINT-GENESE (BELGIUM).
Finite difference computation of the conical flow field over a delta wing
[VKI-TN-140] N82-17135
Density measurements in gas particle flows
[VKI-TM-32] N82-17471

W

WASHINGTON UNIV., SEATTLE.
In situ analysis of thin layer chromatography plates using an imaging detector N82-17276
Forbidden 5200 angstroms emission by atomic nitrogen in a midlatitude aurora N82-17700
The geochemistry of sulfur and carbon in basaltic melts N82-17734
Proportional hazards model with time-dependent covariates: Large sample theory and related topics
N82-17945
QCD and weak asymmetries in lepton pair production N82-17965
Orbiting effects in the inelastic scattering of protons to the continuum
[DE82-002287] N82-17980
A space-time study of double scattering in hadron deuteron collisions N82-17985

WASHINGTON UNIV., ST. LOUIS, MO.
Muscle, motor cortex, cerebellar nuclear, and spindle afferent during slow hold-ramp-hold position-tracking movements of the monkey's wrist N82-17854

WATER RESOURCES COUNCIL, WASHINGTON, D.C.
The Delaware River Basin comprehensive (level B) study

WYLE LABS., INC., HUNTSVILLE, ALA.
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] N82-17553

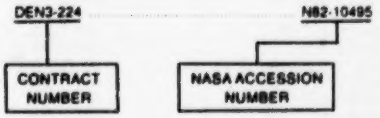
Y

YALE UNIV., NEW HAVEN, CONN.
Laser spectroscopy of molecular beams N82-17293
Electronic absorption spectroscopy of molecular cations in argon matrices N82-17295
Broad-band rotational cars thermometry in nitrogen gas N82-17451
Regulation of calcium current and calicum activity in heart cells N82-17870
Heavy Higgs bosons and their low energy impact N82-17967
Electronic excitation of helium and krypton by electron impact N82-18032
A photometric search for white dwarfs in intermediate-age open clusters N82-18064
Gravitational wave generation by stellar core collapse N82-18093

CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 8

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

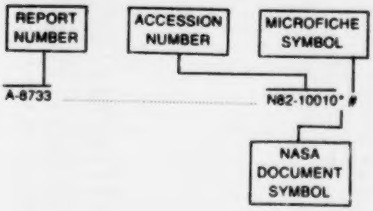
REPORT / ACCESSION NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 8

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an * following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NAS 1.9/4:

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR*'s companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, United States of America.

Semimonthly issues

Annual subscription rates: $90.00 domestic, $112.00 foreign. Price per single copy: $4.75 domestic; $5.95 foreign.

Annual index issues

Pricing based upon pagination.

Domestic subscription rates

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH
Scientific and Technical Aerospace Reports, Volume 20, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through **February 28, 1985**.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

> **AERONAUTICS**
>
> Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).
>
> For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

> **02 AERODYNAMICS**
>
> Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.
>
> For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche(1) are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 ($6.00 domestic; $12.00 foreign). Microfiche are sold at price code A01 ($4.00 domestic; $8.00 foreign). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY, AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $50.00 North America; $100.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

VOLUME 20 NUMBER 9/MAY 8, 1982

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) 1167

02 AERODYNAMICS 1175
Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY 1178
Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation.*

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 1178
Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications.*

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 1180
Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics.*

06 AIRCRAFT INSTRUMENTATION 1183
Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography.*

07 AIRCRAFT PROPULSION AND POWER 1184
Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion.*

08 AIRCRAFT STABILITY AND CONTROL 1185
Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 1185
Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space).*

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) 1186
For extraterrestrial exploration see *91 Lunar and Planetary Exploration.*

13 ASTRODYNAMICS 1191
Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) N.A.
Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air).*

15 LAUNCH VEHICLES AND SPACE VEHICLES 1191
Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 1196
Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation.*

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING N.A.
Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications.*

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 1196

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support.* For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics.*

19 SPACECRAFT INSTRUMENTATION N.A.
For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography.*

20 SPACECRAFT PROPULSION AND POWER 1197
Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion.*

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 1198
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 1199
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 1200
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS 1204
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 1208
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 1210
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also *Physics.*

31 ENGINEERING (GENERAL) 1212
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 1215
Includes land and global communications; communications theory; and optical communications.

For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING 1222
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.

For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER 1228
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY 1231
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS 1234
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 1237
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 1238
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 1240
Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) 1244

43 EARTH RESOURCES 1244
Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION 1248
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION 1256
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 1260
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see *93 Space Radiation.*

47 METEOROLOGY AND CLIMATOLOGY 1264
Includes weather forecasting and modification.

48 OCEANOGRAPHY 1269
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) **1270**
Includes genetics.

52 AEROSPACE MEDICINE **1271**
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES **1273**
Includes psychological factors; individual and group behavior· crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT **1274**
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY **N.A.**
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) **N.A.**

60 COMPUTER OPERATIONS AND HARDWARE **1275**
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering.*

61 COMPUTER PROGRAMMING AND SOFTWARE **1279**
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS **1282**
Includes computer networks.

63 CYBERNETICS **1282**
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support.*

64 NUMERICAL ANALYSIS **1284**
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY **1287**
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS **1289**
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS **1289**
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering.*

70 PHYSICS (GENERAL) **1290**
For geophysics see *46 Geophysics.* For astrophysics see *90 Astrophysics.* For solar physics see *92 Solar Physics.*

71 ACOUSTICS **1291**
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution.*

72 ATOMIC AND MOLECULAR PHYSICS **1292**
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS **1296**
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation.*

74 OPTICS **1296**
Includes light phenomena.

75 PLASMA PHYSICS **1297**
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics.* For space plasmas see *90 Astrophysics.*

76 SOLID-STATE PHYSICS **1298**
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers.*

77 THERMODYNAMICS AND STATISTICAL PHYSICS **1303**
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer.*

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) **1303**
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT **1303**
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE **1304**

Includes information storage and retrieval technology; micrography; and library science.

For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS **1305**

Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE **1306**

Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION **1306**

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

For related information see *03 Air Transportation and Safety*, *16 Space Transportation*, and *44 Energy Production and Conversion*.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) **1307**

89 ASTRONOMY **1308**

Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS **1309**

Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION **1309**

Includes planetology; and manned and unmanned flights.

For spacecraft design see *18 Spacecraft Design, Testing and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

92 SOLAR PHYSICS **1309**

Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION **1310**

Includes cosmic radiation; and inner and outer earth's radiation belts.

For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

DEVELOPMENT AND EVALUATION OF AUTOMATIC LANDING CONTROL LAWS FOR LIGHT WING LOADING STOL AIRCRAFT

B Feinreich, O Degani, and G Gevaert Jul 1981 371 p refs

(Contract NAS2-9410)

(NASA-CR-166160) Avail NTIS HC A16/MF A01 CSCL 01C

Automatic flare and decrab control laws were developed for NASA's experimental Twin Otter This light wing loading STOL aircraft was equipped with direct lift control (DLC) wing spoilers to enhance flight path control Automatic landing control laws that made use of the spoilers were developed, evaluated in a simulation and the results compared with these obtained for configurations that did not use DLC The spoilers produced a significant improvement in performance A simulation that could be operated faster than real time in order to provide statistical landing data for a large number of landings over a wide spectrum of disturbances in a short time was constructed and used in the evaluation and refinement of control law configurations A longitudinal control law that had been previously developed and evaluated in flight was also simulated and its performance compared with that of the control laws developed Runway alignment control laws were also defined, evaluated, and refined to result in a final recommended configuration Good landing performance, compatible with Category 3 operation into STOL runways, was obtained

Scientific and Technical Aerospace Reports

A Semimonthly Publication of the National Aeronautics and Space Administration

01 AERONAUTICS (GENERAL)

N82-18119# Deutsche Gesellschaft fuer Luft- und Raumfahrt, Cologne (West Germany).
SEVENTH EUROPEAN ROTORCRAFT AND POWERED LIFT AIRCRAFT FORUM
1981 951 p refs Proceeding of Conf. Held in Garmisch-Partenkirchen, West Germany, 8-11 Sep. 1981 Original contains color illustrations
Avail: NTIS HC A99/MF A01

Aspects of helicopter and turbine rotor are addressed. For individual titles, see N82-18120 through N82-18173.

N82-18120# Southampton Univ. (England). Dept. of Aeronautics and Astronautics.
DEVELOPMENTS IN ROTARY WING AIRCRAFT AERODYNAMICS **c02**
I. C. Cheeseman *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 27 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Developments in helicopter aerodynamics are reviewed, including new blade sections and planforms. Computer modelling of the flow and the need for further work in predicting oscillating loadings are considered. The greater attention being given to the need to reduce drag in forward flight due to extended range and fuel conservation costs is recognized. A forecast of advances is made. N.W.

N82-18121# Massachusetts Inst. of Tech., Cambridge.
A SIMPLIFIED APPROACH TO THE FREE WAKE ANALYSIS OF A HOVERING ROTOR **c02**
R. H. Miller *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 15 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Rotor wake geometry and the number of blades are analyzed. Simplified approaches to the free wake aerodynamic analysis of hovering rotors permitting rapid evaluation of rotor aerodynamic characteristics are discussed. Analytical results are compared with existing measurements of blade bound circulation and wake geometry. N.W.

N82-18122# Politecnico di Milano (Italy). Instituto di Ingegneria Aerospaziale.
AN EXPERIMENTAL ANALYSIS OF THE SHAPE OF A ROTOR WAKE **c02**
Sergio DePonte and Luigi Vigevano *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 8 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Although the shape of a rotor wake may be described by potential flow methods, to get reasonable calculation costs it is necessary to introduce some simplification in the calculations. In order to check the accuracy and the validity field of the various assumptions a set of experimental data may be a good tool for comparisons. A hot wire technique to detect the presence of the blade wake is presented. N.W.

N82-18123# Tokyo Univ. (Japan).
AN EXTENSION OF THE LOCAL MOMENTUM THEORY TO THE ROTORS OPERATING IN TWISTED FLOW FIELD **c02**
Akira Azuma, Ken-ichi Nasu, and Takatoshi Hayashi *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 19 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The local momentum theory was developed to calculate the dynamic airloading of a helicopter rotor, where the velocity perpendicular to the plane of rotation was assumed to be negligibly low in comparison with the rotating velocity. In the case of propellers or windmills, however, this assumption is no longer adequate, and the flow field seen in the rotor-fixed-coordinate system is noticeably twisted along the span. In order to permit calculation of the induced velocity distribution as well as the airloading of the blade in such a twisted flow field, we have carried out an extension of the local momentum theory. Since our method of calculation is based on the instantaneous circulation distribution rather than the instantaneous momentum balance, it may be called the Local Circulation Method. The present method is also applicable to propellers and windmills in yawed flow. Author

N82-18124# Nanjing Aeronautical Inst. (China).
A SIMPLIFIED METHOD FOR PREDICTING ROTOR BLADE AIRLOADS **c02**
Wang Shi-cun and Xu Zhi *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 28 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Relations of first two harmonic induced velocities to the lower and same-order harmonic circulations are obtained from the generalized classical vortex theory of the rotor. Then, based on the blade element theory, a closed form of equations for circulation is established and, by taking the flapping condition into account, simplified formulae for predicting rotor blade airloads are set up. In particular, expressions of flapping coefficients are derived, including the effect of variable induced velocity distribution but in terms of blade parameters and flight parameters only. Finally, a calculation of a typical example is made and comparisons of airloads with those from the more accurate numerical solution are shown that the present method is fairly suitable for aerodynamic analysis and preliminary design of helicopters. Author

N82-18125# Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Goettingen (West Germany). Inst. fuer Aeroelastik.
A THREE-DIMENSIONAL APPROACH TO LIFT AND MOMENT COEFFICIENTS OF ROTATING BLADES **c02**
Wolfgang Send *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p refs (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

The three dimensional incompressible flow around a thick blade is calculated in the limiting case of an infinitely high Reynolds number. The solution for a four bladed rotor is achieved by interacting the mutual influence of the induced velocities on the blades. Several properties of the three dimensional approach are compared with two dimensional theories. Unsteady results are obtained by combining the quasi-steady flow with the calculation for a given oscillation mode. The integral equation for the flow around the blades is solved by a higher order panel technique for the vorticity vector, continuous on the blade and downstream in the wake. An improper description of the wake integral is evident. The helical wake is substituted by its rectilinear counterpart, for which an analytical description was found. N.W.

N82-18126# Societe Nationale Industrielle Aerospatiale, Marignane (France.) Helicopter Div.

A COMPLETE METHOD FOR COMPUTATION OF BLADE MODE CHARACTERISTICS AND RESPONSES IN FORWARD FLIGHT c05

J. P. Lefrancq and B. Masure *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 9 p (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

Hypotheses and equations, methods of calculation, and numerical adaptation concerning the dynamics of helicopter rotors are dealt with. Two problems raised by a spinning rotor are also dealt with: determination of natural models qualified by their eigen frequency and damping; and forward flight, using the azimuth method which avoids those difficulties inherent to the modal methods. The calculation process used to improve a rotor while at design stage is illustrated. N.W.

N82-18127# Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Goettingen (West Germany). Inst. fuer Aeroelastik.

MODAL CHARACTERISTICS OF ROTOR BLADES: FINITE ELEMENT APPROACH AND MEASUREMENT BY GROUND VIBRATION TEST c05

D. Ludwig *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 23 p refs (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

The mass and stiffness matrices for a rotating blade are established by the finite element method. The formulation is based on the Lagrange function for combined flapwise bending, chordwise bending, and torsion of twisted nonuniform rotor blades. The element matrices are created by the non-numeric computer program REDUCE. An ordering scheme was introduced to demonstrate which terms may be simplified or neglected. As examples, eigen analyses, with the finite element computer program, are performed for a homogeneous beam and for the nonrotating blade of a wind energy converter. The results of the calculations for the beam are compared with the analytical solutions. The rotor blade of the wind energy converter was tested in a ground vibration test. A short description of the ground vibration test technique and performance is given. N.W.

N82-18128# Hochschule der Bundeswehr, Munich. (West Germany). Inst. fuer Luftfahrttechnik und Leichtbau.

DYNAMIC AND AEROELASTIC CHARACTERISTICS OF COMPLETE WINDTURBINE SYSTEMS c02

E. W. Steinhardt *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p refs (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

For the investigation of the dynamic and aeroelastic characteristics of large horizontal axis windturbines, a hybrid model consisting of rigid bodies and flexible continuous structures was developed. Degrees of freedom include tower bending and torsion, pitch and yaw of the nacelle as well as rotation, inplane and out-of-plane bending of the blades. Aerodynamic forces are introduced with special regard to motion-induced effects and on gusts. A set of partial integro-differential equations was established via the principle of virtual work. The application of Galerkin's extended method gives a system of linear periodic differential equations. The numerical results confirm strong rotor-tower-coupling and illustrate the typical features of periodic systems. instationary aerodynamic terms are found to be of minor importance and hingeless rotors will be damped better than teetering rotors, but tower and blade reactions to gravity and gusts are higher. Author

A STUDY OF THE TECHNIQUES OF DYNAMIC ANALYSIS OF HELICOPTER TYPE STRUCTURES c05

G. M. Venn and D. J. Boon *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 21 p (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

The techniques used in the dynamic analysis of helicopter type structures using finite elements are discussed. A test structure was designed and built which incorporated many design features found in helicopter structures. Experiments were performed on this structure to determine the natural frequencies and normal modes. These experimental results were compared with theoretical finite element results. Altering the build state added one or two extra problems so that these could be studied. The modelling problems investigated were: riveted panel-stringer constructions, deep fabricated beams, discontinuous load paths, bolted joints, honeycomb panels, gearboxes, engine mounts, and engines. The techniques used to model these features are discussed. Problems were found when attempting to compare the theoretical and experimental results. N.W.

N82-18130# Virginia Polytechnic Inst. and State Univ., Blacksburg.

THE EFFECTS OF SLIGHT NON-LINEARITIES ON MODAL TESTING OF HELICOPTER-LIKE STRUCTURES c05

D. J. Ewins (Imperial College of Science and Technology) *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 11 p refs (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

A comprehensive series of modal tests was made on a specially built test piece designed to simulate many of the characteristics of helicopter structures. These tests identified the presence of a 'slight' degree of nonlinearity and further established that this almost unnoticed effect causes significant discrepancies in the modal properties deduced from measured data. However, systematic analysis of the measurements may be used to isolate the nonlinear effects and to eliminate them from the results. Author

N82-18131# Societe Nationale Industrielle Aerospatiale, Marignane (France.) Helicopter Div.

PARAMETRIC STUDY OF THE INFLUENCE OF THE ENGINE UPON THE OPERATING COST OF A CIVIL HELICOPTER c83

Gilbert Beziac, Jean-Pierre Dedieu, and Philippe Cabrit *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 5 p (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

The influence of engine characteristics (weight, fuel consumption, price, power range) upon the helicopter operating cost were studied. The parametric relationship between the various factors were defined. Several engine alternatives for a medium weight helicopter were compared. The following conclusions were made: (1) a sufficient power reserve is necessary but too high a value is not profitable; (2) the fuel consumption should be the result of a compromise: interest of a low value, engine complexity, reliability; and (3) a substantial increase in helicopter cost effectiveness is obtained thanks to a simultaneous evolution of aircraft and engine. M.D.K.

N82-18132# Technische Hogeschool, Delft (Netherlands). Dept. of Aerospace Engineering.

PREDICTION OF OFF-DESIGN PERFORMANCE OF TURBO-SHAFT ENGINES A SIMPLIFIED METHOD c07

H. Wittenberg *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p refs (For primary document see N82-18119 09-01)

Avail: NTIS HC A99/MF A01

Estimation of the off-design performance of a given gas turbine is generally based on detailed performance characteristics

of compressor and turbine(s). An approximate method for the estimation of the off-design behavior of turbojet and turbofan engines was developed using thermodynamic relationships only. The method is based on a matching procedure with generalized mass flow characteristics of the turbine(s) or exhaust nozzle(s). The method was adopted to turbo-shaft engines for this study. Examples are given for an actual engine type. There is fair agreement between the calculated off-design performance and the data derived from the manufacturer's engine brochure.

MEASUREMENT TECHNIQUES USED TO ASSESS THE INSTALLED POWER OF A HELICOPTER ENGINE c07
T. G. Morton *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p Original contains color illustrations (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

To improve helicopter performance predictions, it is important to quantify any change in engine performance between the test bed and 'as installed' in the aircraft, and to attribute the reasons for any change as accurately as possible. Measurement techniques used to quantify performance for a particular Rolls-Royce Gem Engine installation is discussed. Extra sensors were added to engines in a production Lynx helicopter which was fitted with recorder equipment in the cabin and flown to a defined schedule. If the engine is considered as a thermodynamic unit, the input/output equation must balance. Test point data based on these inlet and exhaust conditions were obtained from both test bed and flight tests. Analysis of results when compared to a thermodynamic model of the engine, shows that the resultant data is very sensitive to the quality of measurements and will quickly show the deviation from predicted characteristics. Author

COMPONENT DESIGN AND DEVELOPMENT FOR FUTURE HELICOPTER ENGINES c07
Jean Hourmouziadis and Horst B. Kreiner *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 19 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Advances achieved today and results available from both rig and demonstrator test programs for present and future helicopter engines are discussed. These will form the basis for further component improvement required to yield a successful next generation engine. The significance of reduced fuel consumption, improved overall system performance, and reliability are considered in relation to design activity and reaction to changing customer needs.

THREE-ENGINE CONTROL SYSTEM FOR THE PROTOTYPE EH-101 HELICOPTER c07
E. A. Chiuchiolo and J. J. Curran *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft 1981 10 p refs (For primary document see N82-18119 09-01)
(AEBG-9/81-1568L) Avail: NTIS HC A99/MF A01

The T700 control system configured for installation in the three-engined WG.34A helicopter (prototype for European Helicopter Industries EH-101) provides for a versatile control system which may be operated normally to provide the helicopter propulsion or may be operated as a totally independent system to power airframe avionics and power accessories. It is designed to maintain constant speed for accessories or load share with second and third engines and is independent of position in the aircraft. The total system is automatic and provides not only constant rotor speed but also closely matched torques. Modifications made to the T700 control system to provide the above capabilities are discussed. Discussion of the need for these modifications and the present status of the design is also designed.

ENGINE SUPERFICIAL TEMPERATURE AND INFRARED SIGNATURE c07
A. M. Ricci, A. N. Allavena, and W. Esposti (I.C.I.T.E., S. Giuliano Milanese, Italy) *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 17 p (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

A system calibration and data processing method was set up to provide spatial information on temperature and a spatially accurate radiant intensity map under different angles. The methodology was developed to evaluate the thermal exchange between engine and engine-cowling and their infrared signature in the 1 - 6 micrometer range in order to evaluate special infrared treatment to reduce infrared emission. The infrared imagery camera was coupled to an analogic/digital data acquisition system. Calibration studies were conducted in an infrared laboratory to provide the absolute calibration on the thermograph in the previously defined spectral range. The results are presented in profiles of temperature and radiance.

POINT OF VIEW OF A HELICOPTER MANUFACTURER ON AIRWORTHINESS REGULATIONS
Jean Boulet *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 5 p (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Helicopter airworthiness regulations are discussed. The need for airworthiness regulations to be drafted and modified through a process of constant consultation between Civil Aviation Authorities and manufacturers is discussed. The need to introduce the concept of probability to be able to come closer to the actual risks and to avoid penalizing aircraft with useless systems and demonstration requirements is also considered. It is suggested that these regulations tend toward one single international set of regulations and one single demonstration of compliance with the regulations. The possibility of reconciling a continuously improved safety level and a progressive reduction in helicopter costs is also considered.

MILITARY REQUIREMENTS: TOO LITTLE OR TOO MUCH
Emidio Valente *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 18 p (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Concepts useful for a better understanding of the military requirements, operational requirements for helicopters are discussed. The need for an understanding between military operators of rotary-wing aircraft, helicopter designers, and manufacturers is considered. Two viewpoints are summarized: (1) The helicopter is a weapon system featuring the same indispensability level of all other systems required to integrate the battlefield. (2) The helicopter must be designed to reflect military requirements which cover all those elements likely to condition its operation, this is to say: operational environment, human factor, and economical aspects. The following considerations are recommended for further investigation: (1) whether commercial operators are really affected and (2) whether solutions can be found which in the end prove to be a saving rather than a deterioration in cost, weight and complexity.

PARAMETRIC CRITERIA AND IMPACT ON DESIGN TRENDS c05
Roberto dePompeis and Fulvio Gagliardi (Ministry of Defence) *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 25 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Laws or trends of typical parameters which contribute to the definition of an 'ideal' specific helicopter which can be used as a reference model and give a nondimensional measure of effectiveness are discussed. Operative requirements, taking into account the main factors affecting missions were transferred into a mathematical model. The procedure was derived from theoretical studies already applied to aircraft selections and consists of three main steps: (1) Effectiveness program; (2) Total operating cost estimation; and (3) Evaluation of effectiveness-cost ratio and

optimization of the fleet selection. All costs (manufacturing, maintenance, training, operating, etc.) for the operative life are estimated with a similar methodology and lead to the determination of the effectiveness-cost ratio which may be optimized taking into account the fleet consistency required to fulfill the task.

DESIGN PHILOSOPHY OF THE HUGHES MODEL 600 HELICOPTER c05
R. S. Taylor *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The design philosophy of a new model helicopter, the Hughes model 600X, which took into consideration a number of factors is discussed. The following subjects are discussed and a rationale for the selected approach is given: (1) whether to grow or develop a totally new configuration. To be cost effective, a growth helicopter would need to produce significant additional advantages which would be offset by the ever present compromises of the old design; (2) how to grow an 'egg', especially one with internal structure; (3) how to replace the old model or is the new model to be produced in addition to the old one; and (4) how is the market potential to be assessed. Details of approaches are presented with reasons for accepting or rejecting each one. Results of market analysis and response of the helicopter public is presented to show the viability of the selected configuration.

WIND TUNNEL INVESTIGATION OF HIGH SPEED ROTOR NOISE c71
H. Tadghighi and I. C. Cheeseman *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 25 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

A high speed model rotor (tip Mach number of 0.75) was developed to investigate tail rotor noise in forward flight conditions. The existing 2.1 by 1.5 m low speed (30 m/sec) closed circuit wind tunnel was modified and utilized to enable acoustic measurements of forward flight to be made. Check tests in the 24 ft anechoic wind tunnel show excellent agreement with the development tests. The model rotor noise data are found to correlate well with full scale helicopter rotor values. Simultaneously recorded aerodynamic performance of the model rotor (blade loading, steady thrust, torque and trimmed moments) is compared with theoretical aeroacoustic treatments. It is concluded that the model rotor accurately simulates full scale rotor aeroacoustic data.

PREDICTION OF BLADE VORTEX INTERACTION NOISE FROM MEASURED BLADE PRESSURE c02
Yoshiya Nakamura *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 20 p refs Sponsored by NASA (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01 CSCL 01A

The impulsive nature of noise due to the interaction of a rotor blade with a tip vortex is studied. The time signature of this noise is calculated theoretically based on the measured blade surface pressure fluctuation of an operational load survey rotor in slow descending flight and is compared with the simultaneous microphone measurement. Particularly, the physical understanding of the characteristic features of a waveform is extensively studied in order to understand the generating mechanism and to identify the important parameters. The interaction trajectory of a tip vortex on an acoustic planform is shown to be a very important parameter for the impulsive shape of the noise. The unsteady nature of the pressure distribution at the very leading edge is also important to the pulse shape. The theoretical model using noncompact linear acoustics predicts the general shape of interaction impulse pretty well except for peak amplitude which requires more continuous pressure information along the span at the leading edge. PRELIMINARY THOUGHTS ON HELICOPTER CABIN NOISE PREDICTION METHODS c71

J. S. Pollard *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 14 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The problems of predicting helicopter cabin noise are discussed with particular reference to the Lynx helicopter. Available methods such as modal analysis adopted for propeller noise prediction do not cope with the higher frequency discrete tone content of helicopter gear noise, with the airborne and structure-borne noise contributions. Statistical energy analysis methods may be the answer but until these are developed, one has to rely on classical noise transmission analysis and transfer function methods. Author

THE MEASUREMENT OF THE MOBILITY OF STRUCTURES AT ACOUSTIC FREQUENCIES c39

Susan M. Damms *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 21 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The development of a technique to measure the response of structures to vibrational input forces and moments is described. So far, simple structures with known properties have been used but it is intended to apply the technique in the design of an interface which isolates vibrationally the gearbox of a helicopter from the cabin at acoustic frequencies. In a first experiment, no moments were applied. The main object was to demonstrate that measurements could be made on two components of a structure with sufficient accuracy to correctly predict measurements on the assembled structure. The two components were a beam and a dynamic absorber. In a second experiment a special block was attached to a beam to enable forces and moments to be applied and translations and rotations to be measured. The particular mobilities measured were chosen so that they could be easily compared with theory and also with measurements without a block. J.M.S.

FLIGHT CHARACTERISTICS DESIGN AND DEVELOPMENT OF THE MBB/KHI BK117 HELICOPTER c05

H. Huber and T. Masue (Kawasaki Heavy Industries) *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 21 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The BK 117 light, twin-engine helicopter was designed to provide high flexibility of operations, attractive performance characteristics, and outstanding handling qualities. Dominant features result from the hingeless rotor system, which provides inherent high control power and high angular velocity damping. Further optimization is achieved through refinement of the fuselage aerodynamic design, and by a proper layout of the empennage configuration, taking into account the interactional aerodynamic phenomena. The particular design features and their impact on the helicopter flight characteristics are described. The results obtained in the areas of static and dynamic stability (longitudinal, lateral directional), control response and maneuver characteristics, aeromechanical stability and loads and vibrations are presented, including correlation of flight test data with computer model simulations. A GENERAL PURPOSE PROGRAM FOR ROTOR BLADE DYNAMICS c05

M. Borri, M. Lanz, and P. Mantegazza *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 15 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

A computer program for rotor blade dynamics capable of dealing both with hinged and hingless rotors, suitable for steady state flight analysis and stability evaluation was developed. Blade motion is represented by finite elements in the space-time domain, covering the span of one or more rotor revolutions, and allowing for different nonlinearities. This method gives a flexible unitary approach for the very different model complexities required by the different design phases, such as the simplest rigid blade schemes, and the more sophisticated ones including nonlinearities arising from large blade flexibilties and large movements in control links. The aerodynamics, at the present development state, considers prescribed wake geometry and blade element theory, including stall and compressibility effects. J.M.S.

AUTOMATIC GENERATION OF EQUATIONS FOR ROTOR-BODY SYSTEMS WITH DYNAMIC INFLOW FOR A PRIORI ORDERING SCHEMES c02

J. Nagabhushanam, G. H. Gaonkar (Indian Inst. of Science), and T. S. R. Reddy (Indian Inst. of Science) *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 37 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

In helicopter dynamics research with interpretive models, the process of manually deriving state equations for a priori ordering schemes is tedious and of limited reliability. The feasibility of its computerization by a completely self contained symbolic processor in FORTRAN 4 is discussed. The symbolic manipulation details are presented for a coupled rotor-fuselage system with dynamic inflow in forward flight. The coupled system refers to a rotor with rigid blades executing lag and flap motions and to a fuselage idealized as a simple rigid body executing roll and pitch motions. The feedback from dynamic inflow refers to a first-order model based on an unsteady actuator-disk theory. The use of such a processor offers considerable promise in that for an adequate model representation, state equations can be generated for a priori ordering schemes as required in stability, vibration and combined stability and vibration analyses. Author

A CONTROL MODEL FOR MANEUVERING FLIGHT FOR APPLICATION TO A COMPUTER-FLIGHT TESTING PROGRAM c08

H. Haveridings *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

A computer-flight-testing (CFT) program for helicopters to evaluate helicopter dynamics and handling and control qualities is described. The nonlinear six degrees of freedom helicopter model is driven by control inputs generated by a specially developed control model (or 'pseudo pilot') to eliminate problems in estimating control inputs during maneuvering flight. This is an adaptation of a linear optimal control model as used in human factor analysis. The helicopter model is based on two-dimensional strip aerodynamics steady-state rotor blade dynamics using only out-of-plane bending mode shapes, which are suitable for various types of rotor articulation. The 'pilot' model consists of a flight path generation (FPG)-model and a stabilitization (STAB)-model. The FPG-model is based on linearized system dynamics using terminal optimal control, generating both required flight path and the control inputs to achieve it. These controls are input into the helicopter model. The two flight paths are compared, and differences are fed back to the STAB-model to generate corrective control inputs of such a nature that the helicopter-model-generated flight path tracks the required flight path generated by the FPG-model. Also the STAB-model is based on linearized system dynamics. As an example, two flare maneuvers are 'flown', and the results discussed. The pseudo-pilot model performs well, provided that helicopter dynamics do not change much during a specific maneuver. J.M.S.

PRELIMINARY INVESTIGATION INTO THE ADDITION OF AUXILIARY LONGITUDINAL THRUST ON HELICOPTER AGILITY c05
P. J. Legge, P. W. Forestcue (Southampton Univ.), and P. Taylor (Southampton Univ.) *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 17 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The agility requirements in specific maneuvers performed by military helicopters are investigated. A simple mathematical simulation of the helicopter accelerating and decelerating longitudinally is used to examine the advantages of auxiliary thrust. For helicopters operating in the Nap-of-Earth environment the longitudinal acceleration and deceleration performance is shown to be uniquely important. Large improvements in agility, measured by a performance function, are obtained by adding auxiliary thrust. The need for the helicopter to change its attitude is drastically reduced, and the pilot workload improved. The type of flight profile used is also examined, using a nondimensional Froude number. There was no benefit in a 'maximum effort' flight profile, which consequently further improves the pilot workload. Auxiliary thrust improved agility performance by increasing the helicopter's ability to change position while maintaining precise attitude control. J.M.S.

OPTIMUM PERFORMANCE AND WAKE GEOMETRY OF CO-AXIAL ROTOR IN HOVER c05
Tomoari Nagashima and Kenji Nakanishi *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 17 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Numerical studies to clear out the rotor-wake interference effects on the optimum performance and wake geometry of a coaxial rotor in hover are performed using the generalized momentum theory and the simplified free wake analysis. For applying the momentum concept to the performance predictions of the coaxial rotor system, each wake of rotors and flow fields around them are modeled so as to properly incorporate wake contractions, rotational velocities, and nonlinear mutual interference effects. In case of the free wake analysis, it is approximated by a finite number of discrete circular vortices whose numbers and core radii are deduced from the sensitivity analysis. The numerical results clearly show that the performances and its wake geometries are largely dependent on the axial spacings and the pitch differences between rotors and there are unique combinations of them which could produce the optimum performance. It is also understood that the upwash effect of the contracted upper rotor wake on the lower rotor plays a fundamental role to improve the hover performance with coaxial rotor arrangement. Author

A NUMERICAL APPROACH TO CO-AXIAL ROTOR AERODYNAMICS c02
Shigeru Saito and Akira Azuma *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 19 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

In the simple momentum theory, the aerodynamic characteristics of the lower rotor of a coaxial rotor system are usually evaluated under the highly deteriorated conditions caused by the fully developed wake of the upper rotor, specifically under the conditions of hovering flight. Analysis using the Local Momentum Theory not only shows the performance of the lower rotor to be higher than that calculated by the simple momentum theory but also makes it possible to calculate the instantaneous airloading of blades operating in a complex wake system. By introducing the radial shrinkage of the rotor wake, the accuracy of the analysis of blade airloading is further improved. The calculated results are compared with those of wind tunnel tests in both hovering and forward flights. In forward flight, the performance of the lower rotor improves not only with increases in the forward speed but also with increase in the vertical distance between the upper and lower rotors. In hovering flight, the improvement in the performance is not remarkable because the lower rotor is strongly influenced by the upper rotor wake. Author

HELICOPTER ROTOR DOWNWASH: RESULTS OF EXPERIMENTAL RESEARCH AT THE DFVLR-ROTOR TEST STAND AND THEIR COMPARISON WITH THEORETICAL RESULTS c02
B. Junker and H.-J. Langer *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 23 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

System tests and dynamic researches at the rotor test stand were compared with several downwash measurements to demonstrate the dependency between mathematical parameter values and rotor control values, e.g., thrust, advance ratio, and control angles. For comparisons mathematical models like the local momentum theory, and a fixed vortex model were applied. For these experiments a four bladed hingeless rotor and a two bladed See Saw rotor with an advance ratio of up to mu = 0.2 were used. Numerous tests were performed to study the flow field of rotor downwash in different wind tunnels. The measuring equipment for the downwash was set up on both sides of the rotor stand. So it was possible to receive two values at the same time. At first pneumatic probes were applied, that gave acceptable mean values, and then hot-wire probes in X-configuration were used to investigate downwash dynamics in more detail. Measurements were conducted in the x-z-plane. Wind tunnel test results, correlation to the mathematical models, and errors are discussed. J.M.S.

HOVER TESTS OF A MODEL H-FORCE ROTOR c05
H. R. Velkoff *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 19 p refs (For primary document see N82-18119 09-01)
(Contract NCA2-OR565-001)
Avail: NTIS HC A99/MF A01

The potential of using tip vanes at the ends of helicopter rotor blades to obtain a controllable H-force is considered. The addition of vanes placed perpendicular to the blade tips can be used to obtain an inplane force. By varying the angle of the vanes, a radial force can be created which can be controllable in azimuth position. Such a force could be used to provide translational motion of the rotor and aircraft without the requirement for rotor tilting. In addition, an H-force generated at high flight speed could be used as a propulsive force in a matter similar to a propeller. The force generated by the vanes could also affect the aircraft's stability characteristics. The H-force could also modify rotor performance in hovering since they could be thought to act as a virtual shroud. Tests were run with a model rotor which has a 6 foot diameter with a 3 inch chord blade. Test data are presented on the effects of various tip-vane configurations on the hovering figure of merit. The extreme sensitivity of the performance to vane arrangement is shown. Author

SOME UNSTEADY AERODYNAMIC EFFECTS ON HELICOPTER ROTORS c02

P. G. Wilby, M. J. Riley, and Judith Miller *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 14 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Unsteady effects have an important influence on the aerodynamic loading experienced by a helicopter rotor in forward flight. These effects include dynamic stall characteristics with the associated stall delay and large nose-down change in pitching-moment. All unsteady effects must be taken into account when predicting rotor loads, performance and flight envelope. However, the full unsteady effects on the rotor result from simultaneous oscillatory variations of both incidence and Mach number, and it is difficult to study these effects in isolation from the rest of the rotor environment. Empirical methods for modelling these effects, especially dynamic stall characteristics, were developed and incorporated in the rotor loads prediction methods. Results from a program of work involving oscillatory aerofoil tests, flight experiments and unsteady aerodynamic prediction methods are presented. T.M.

SEPARATED FLOW AROUND HELICOPTER BODIES c02

G. Polz and J. Quentin *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 19 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

On the rear part of the helicopter fuselage, flow separation is often unavoidable owing to the shape of the afterbody which is often defined more in accordance with operational requirements (for example cargo door) and with only minor consideration to aerodynamic aspects. Because of the separated flow, an analytical calculation of the flow field using potential flow theory is not possible. After an overview about the separated flow phenomena a method is explained based on a combination of panel methods with boundary layer analysis. In this method the wake flow region is represented by a wake body which consists of a uniformly distributed vorticity. Calculated pressure distributions and flow fields are shown in comparison with wind tunnel test results. The main interest lies in the more downstream part of the wake, which is very important for the tail surface and tail rotor effectiveness. Author

A METHOD OF PREDICTING FUSELAGE LOADS IN HOVER c02

P. Taylor *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 13 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

A computer program called DOWNLOAD was developed in which the fuselage separated flow is modelled using a vortex sheet representation. The vortex sheet model can predict the separated flow pressure distribution provided the separation point is known. Unfortunately, the poor behavior of the vorticity vector in the separation region prevents an accurate prediction of the separation line. DOWNLOAD was applied to three simple fuselage shapes with a simple triangular representation of the rotor downwash. The predicted download values were in the lower region of the figures usually quoted as a percentage of thrust. T.M.

IMPACT OF SYSTEMS TECHNOLOGY AND INTEGRATION ON HELICOPTER DESIGN c05

K. Schymanietz *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 20 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

A helicopter design depends on a variety of parameters, criteria and requirements. A new design is generated either by a direct order of a customer or due to industrial investigations in the different fields like market trend studies, application of advanced or new technologies and/or overall efficiency improvements. A complete design includes not only the vehicle design with its main functional groups but also the integration of the systems/equipment concept. In the past a new helicopter design was conducted mainly due to the task for a new vehicle. The fact that - especially in the military field - the impact of systems gets an increasing influence in all design areas, gives an impression of the importance of systems technology and integration in the helicopter design. Future changes in design concepts are considered in terms of the chronological advance in the design of the different system components, new technologies for new systems, e.g., in the field of visionics, and system architecture based on a digital bus connection. REVIEW OF HELICOPTER MAST MOUNTED SIGHT (MMS) BASE MOTION ISOLATION AND LINE-OF-SIGHT (LOS) STABILIZATION CONCEPTS c06

Daniel P. Schrage *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 16 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Incorporation of a MMS or any precision stabilized pointing system on a helicoper is a complex and interesting dynamic design problem which combines automatic control through a servomechanism with vibration reduction techniques. Generally, the helicopter disturbance inputs to the MMS must be accomodated by a stiffer MMS structure and servo-system. However, weight and cost are usually critical and many benefits could be derived from incorporation of a lightweight vibration isolator. There are important design considerations on both sides of the interface, the airframe and the MMS. A review of these design considerations and several vibration isolation concepts is presented. The need for adequate simulation modeling of this complex dynamic environment is discussed. T.M.

MAST MOUNTED VISUAL AIDS c06

R. D. vonReth *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 24 p refs (For primary

document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

Initial flight tests with a spherical mock up, having the same shape, weight and moments of inertia as the actual system were carried out on a Bo 105 with two different rotormast extensions (90 and 120 cm). A vibration survey over most of the Bo 105's flight envelope showed vibrational loads which can be tolerated by the actual system. As a next step the actual stabilized platform with FLIR, TV-camera and laser range finder was installed on the rotormast. In addition several subsystems used for the display of the video images with superimposed symbology are described. For direct comparison purposes three different systems, head up, head down and helmet mounted sight and display were evaluated. The influence of the rotorplane, vibrational loads and meteorological conditions on the performance of the FLIR image is described.

EXPERIMENTAL INVESTIGATION OF VISUAL AIDS FOR HELICOPTERS: LOW LEVEL FLIGHT AT NIGHT AND POOR VISIBILITY **c06**

R. Beyer, E. Danneberg, E. Kohnen, and H. Stein *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 15 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The potential and the limitations of advanced display systems for visual aids in helicopters were investigated. A combination of the sensor image and computer generated instrument displays in a head-down display, helmet mounted sight/display and night goggles, were evaluated. The layout of the instrument display is considered assuming transport mission and various display modes are implemented. The visual aids were flight tested in Bo 105 and Bell UH-1D helicopters with particular emphasis on the usefulness of the display modes on flight performance and low level flight performance.

THE MULTI MODE MATRIX FLAT PANEL DISPLAY: TECHNOLOGY AND APPLICATIONS **c06**

A. Moffat and P. Wright *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 19 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

An important aspect of current developments in advanced cockpit design is the introduction of a small number of interactive multi-function electronic displays with digital data processing, in conjunction with a MIL-STD-1553 type of multiplex data bus in an integrated system as opposed to the conventional approach of large numbers of stand-alone electro-mechanical instruments and a variety of different and independent dedicated inputs. Advances in high speed vector graphic display systems based on modular LED flat panel technology and micro-programmable multiprocessor data handling with MIL-STD-1553B compatible interfaces are described. Applications and systems performance are discussed in terms of typical military airborne mission-oriented display image formats and associated hardware and software characteristics. The real-time vector graphic presentations as described include flight control, navigation, communications, engine and fuel management, weapons management, symbolic map, signal communication and other types of real-time cockpit advisory information.

A REDUNDANCY CONCEPT FOR A DIGITAL CSAS **c05**

P. Wuest and M. Keller *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 12 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

One of the promises of digital technology is the possibility of implementing more intelligent monitoring techniques, for example, self monitoring methods. Typical redundancy and monitoring concepts, which were realized in aircraft, helicopter and engine control systems were reviewed. A system which was orginally not designed for a helicopter application but which shows all characteristics of a CSAS is described. The system is based on two essentially autonomous computing lanes, each able to provide all the necessary control and monitoring functions.

EVALUATION OF THE HELICOPTER LOW AIRSPEED SYSTEM LASSIE **c06**

J. Kaletka *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 23 p refs (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

To evaluate the airspeed sensing capability and the dynamic response characteristics of the system, both flight tests and wind tunnel tests were conducted. The system uses a swivelling pitot static probe designed to operate within rotor downwash in the low airspeed regime and out of downwash for higher speeds. Due to nonlinearities in the sensor transition phase an accurate system characterization is necessary to obtain reliable airspeed data. Flight tests that were conducted to characterize the system for a Bo 105 helicopter are described. The evaluation method and results, showing uncalibrated and calibrated data are discussed in detail. To investigate the dynamic behaviour of the system, dynamic tests in a wind tunnel equipped with a gust generating system were conducted. LASSIE transfer functions were measured for four different wind tunnel speeds. Representative results are shown and discussed.

INTEGRATION OF INERTIAL SENSORS IN HELICOPTERS **c06**

Volkmar Held *In* DGLR Seventh European Rotorcraft and Powered Lift Aircraft Forum 1981 17 p (For primary document see N82-18119 09-01)
Avail: NTIS HC A99/MF A01

The demand for saving weight, volume and especially cost requires new design concepts for avionic systems. In future, highly integrated systems will replace the conventional systems with specific stand-alone equipment for each system function. A concept for the integration of inertial function flight control, sight-stabilization, navigation of a helicopter is presented. A configuration with a minimum number of dislocated inertial sensors is proposed. The system functions are accomplished on system level by integration and multiple use of the sensor signals. It is shown that the navigation functions, attitude and heading can be derived from the flight control and stabilization hardware so that the usually required separate attitude and heading reference system for the navigation is saved. Moreover, the proposed concept provides as an additional function the autonomous initial alignment to north.

[AVIATION AND SPACE FLIGHT RESEARCH ACTIVITIES] Annual Report, 1980 [JAHRESBEREICHT 1980]

Sep. 1981 176 p refs In GERMAN
Avail: NTIS HC A09/MF A01

Results on the main research projects conducted in 1980 are described in the areas of transport and communication systems, airplanes, space flight techniques, exploration techniques, and energy and turbomachinery techniques. The improvement of reliability and security in transportation is a common feature of all projects. Aviation research is focussed on projects such as AIRBUS, fighter aircraft, and helicopters. Spacelab and the development of suitable payloads are the central issues of the space research effort with emphasis on material and processing techniques as well as biophysics and biomedicine. Data acquisition, using sensors and processing of satellite and Spacelab data is actively pursued. Recent developments in the domain of turbomachinery, nonnuclear energy research, energy conservation, and high energy laser techniques are also discussed.

RIME ICE ACCRETION AND ITS EFFECT ON AIRFOIL PERFORMANCE Ph.D. Thesis
Michael Bradford Bragg 1981 194 p
Avail: Univ. Microfilms Order No. 8128967

A methodology was developed to predict the growth of rime ice, and the resulting aerodynamic penalty on unprotected subcritical, airfoil surfaces. The system of equations governing the trajectory of a water droplet in the airfoil flowfield was developed and a numerical solution was obtained to predict the mass flux of super cooled water droplets impinging on the airfoil leading edge. By assuming that the droplets freeze on impact, a rime ice shape is predicted. The effect of time on the ice growth is modeled by a time stepping procedure where the flowfield and droplet mass flux are updated periodically through the ice accretion process. A similarity analysis was performed for the rime icing problem. Two new similarity parameters, are found to govern the accretion of rime ice. In addition an analytical solution is presented for Langmuir's classical modified inertia parameter.

INVESTIGATION OF SUPERSONIC SEPARATED FLOW IN A COMPARISON CORNER BY LASER DOPPLER ANEMOMETRY Ph.D. Thesis
Edmund Craig Baroth 1981 131 p
Avail: Univ. Microfilms Order No. 8200017

A single-component, computer-operated, three dimensional traversing laser doppler velocimetry (L.D.V.) system was designed and constructed for use in a supersonic wind tunnel. The model used was a 10 deg compression corner (Aspect Ratio = 1.34) which spanned the test section and was sealed at the side windows. The model provided an example of two dimensional laminar boundary layer separation. Mean streamwise velocity and turbulence intensity profiles were obtained for the region extending from upstream of separation to downstream of reattachment. The trend of decreasing upstream influence with increasing Reynolds number was confirmed. The two dimensional nature of the flow was confirmed by spanwise pressure taps. The laser system gave excellent results within the recirculation zone. The flow was found to be of the laminar type until downstream of reattachment. Individual mean velocity and turbulence intensity profiles, as well as velocity histograms are presented.

MEASUREMENTS IN THE NEAR-WAKE OF A TRANSPORT MODEL, TO DETERMINE THE LIFT, DRAG AND DRAG COMPONENTS USING MASKELL'S ANALYSIS
A. J. Priest, D. G. Dobney, and R. P. Hill 3 Feb. 1981 91 p refs
(RAE-TR-81012; RAE-Aero-3497; BR79571) Copyright. Avail: Issuing Activity

A plane normal to the wake of a sweptwing/fuselage model of AIRBUS type, at C sub L = 0.49 in incompressible flow was measured, using a computer controlled wake traverse system incorporating a null reading five hole yawmeter probe. The results define the detailed distributions of total pressure defect, flow velocity, flow angles and streamwise vorticity in the viscous wake at that plane. The results allow the calculation of lift and drag from traverse data and the resolution of the drag into provisionally defined components CD1 and CD2, relating to the profile drag and vortex drag.

COMPARISON OF TWO PARALLEL/SERIES FLOW TURBOFAN PROPULSION CONCEPTS FOR SUPERSONIC V/STOL
R. W. Luidens, G. E. Turney, and J. Allen 1981 15 p refs
Presented at the V/STOL Conf., Palo Alto, Conf., 7-9 Dec. 1981
(NASA-TM-82743; AIAA-81-2637; E-1056) Avail: NTIS HC A02/MF A01 CSCL 01A

The thrust, specific fuel consumption, and relative merits of the tandem fan and the dual reverse flow front fan propulsion systems for a supersonic V/STOL aircraft are discussed. Consideration is given to: fan pressure ratio, fan air burning, and variable core supercharging. The special propulsion system components required are described, namely: the deflecting front inlet/nozzle, the aft subsonic inlet, the reverse pitch fan, the variable core supercharger and the low pressure forward burner. The potential benefits for these unconventional systems are indicated.

AN ANALYTICAL INVESTIGATION OF THE FREE-TIP ROTOR FOR HELICOPTERS
Robert H. Stroub Feb. 1982 30 p refs
(NASA-TM-81345; A-8806) Avail: NTIS HC A03/MF A01 CSCL 01A

A rotor configuration called the free-tip rotor was analytically investigated for its potential to improve helicopter forward-flight performance characteristics. This rotor differs from a conventional rotor only in the blade tip region. In this configuration, the tip is self-adjusting in pitch with respect to the rest of the blade, in accordance with a moment balance about its pitch axis. With this self-adjusting capability, the resulting pitch motion generates a more uniform airload distribution around the azimuth. Computer math models were used to compare performance characteristics of the free tip rotor with those of a conventional rotor operation at flight speeds from 130 to 160 knots. The results of this analysis indicate that the free-tip rotor improves cruise lift-drag ratio by at least 22%.

Avail: NTIS HC A18/MF A01 CSCL 01A

Tests were conducted a linear cascade of airfoils oscillating in pitch to measure the unsteady pressure response on selected blade along the leading edge plane of the cascade, over the chord of the center blade, and on the sidewall in the plane of the leading edge. The tests were conducted for all 96 combinations 2 mean camberline incidence angles 2 pitching amplitudes 3 reduced frequencies and 8 interblade phase angles. The pressure data were reduced to Fourier coefficient form for direct comparison, and were also processed to yield integrated loads and particularly, the aerodynamic damping coefficient. Data obtained during the test program, reproduced from the printout of the data reduction program are compiled. A further description of the contents of this report is found in the text that follows.

A METHOD OF CHARACTERISTIC SURFACES. THE APPROXIMATE SOLUTION OF THREE-DIMENSIONAL SUPERSONIC FLOW FIELDS FROM THE NEAR FIELD UP TO THE SONIC BOOM REGION Ph.D. Thesis

Theodorus Petrus Marie Hendriks 12 Nov. 1981 163 p refs
Avail: NTIS HC A08/MF A01

A method of characteristic surfaces is presented, which may be used to describe the supersonic flow past a three dimensional body uniformly valid up to first order. The method is based on a geometric study of the characteristic surfaces, which envelop the most important disturbances in the originally undisturbed free stream. This leads to the conclusion that the linearized theory can be made valid throughout a supersonic flow field, provided that the predicted flow perturbations are shifted from acoustical characteristic surfaces towards corresponding first order surfaces. SPIN-TUNNEL INVESTIGATION OF A 1/13-SCALE MODEL OF THE NASA AD-1 OBLIQUE-WING RESEARCH AIRCRAFT

William L. White and James S. Bowman, Jr. Feb. 1982 28 p ref
(NASA-TM-83236; L-14834) Avail: NTIS HC A03/MF A01 CSCL 01A

The spin and recovery characteristics of a 1/13-scale model of the NASA AD-1 oblique-wing research aircraft at wing-skew positions of 0, 25, 45, and 60 deg (right wing forward) were investigated. Spins were obtained for all wing-skew positions tested. For the unskewed wing position, two spin modes were possible. One spin mode was very steep and recoveries were obtained within 1 turn or less by rudder reversal. The second spin mode was flat and fast; the angle of attack was about 75 deg and the spin rate was about 145 deg/sec (2.5 seconds per turn). For the skewed wing positions, spins were obtained only in the direction of the forward-skewed wing (right wing forward). No spins were obtained to the left when the wing was skewed with the right wing forward. Recoveries should be attempted by deflecting the rudder to full against the spin, the ailerons to full with the spin, and movement of the wings to 0 deg skew. If the wing is skewed, the recovery may not be effected until the wing skew approaches 0 deg. B.W.

NUMERICAL ANALYSIS AND FORTRAN PROGRAM FOR THE COMPUTATION OF THE TURBULENT WAKES OF TURBOMACHINERY ROTOR BLADES, ISOLATED AIRFOILS AND CASCADE OF AIRFOILS Final Report - Ph.D. Thesis Mar. 1980

C. Hah and B. Lakshminarayana Washington NASA Feb. 1982 171 p refs
(Grant NsG-3012)
(NASA-CR-3509; PSU-TURBO-81-4) Avail: NTIS
HC A08/MF A01 CSCL 01A

Turbulent wakes of turbomachinery rotor blades, isolated airfoils, and a cascade of airfoils were investigated both numerically and experimentally. Low subsonic and incompressible wake flows were examined. A finite difference procedure was employed in the numerical analysis utilizing the continuity, momentum, and turbulence closure equations in the rotating, curvilinear, and nonorthogonal coordinate system. A nonorthogonal curvilinear coordinate system was developed to improve the accuracy and efficiency of the numerical calculation. Three turbulence models were employed to obtain closure of the governing equations. The first model was comprised to transport equations for the turbulent kinetic energy and the rate of energy dissipation, and the second and third models were comprised of equations for the rate of turbulent kinetic energy dissipation and Reynolds stresses, respectively. The second model handles the convection and diffusion terms in the Reynolds stress transport equation collectively, while the third model handles them individually. The numerical results demonstrate that the second and third models provide accurate predictions, but the computer time and memory storage can be considerably saved with the second model. B.W.

CAVITY OSCILLATION IN CRUISE MISSILE CARRIER AIRCRAFT Final Report, Aug. 1979 - Apr. 1981

Harold W. Bartel and James M. McAvoy Wright-Patterson AFB, Ohio AFWAL Jun. 1981 151 p refs
(Contract F33615-79-C-3207; AF Proj. 2401)
(AD-A108610; LG81ER0156; AFWAL-TR-81-3036) Avail: NTIS HC A08/MF A01 CSCL 20/4

This report discusses cavity oscillation in general, and particularly the problem of cavity oscillation in the missile bays of cruise missile carrier aircraft during missile launch. The missile bay configurations analyzed ranged from the complete interior volume of a large transport aircraft, to the bomb bay of a conventional bomber. All of the carrier aircraft cases evaluated were conceptual; no specific airframe models or manufacturers are identified. The principles and technology presented are not limited to missile bays; they are applicable to general cavities having free-stream flow velocities above Mach 0.4. It is observed that above Mach 0.4 the pressure fluctuations in an oscillating cavity may arise from: (a) sustained periodic pressure fluctuations in the aperture shear layer that radiate noise into the cavity; and (b) sustained periodic pressure fluctuations in the aperture shear layer that couple with the cavity volume acoustic modes (this generally produces by far the most intense cavity oscillation). Theoretical/empirical techniques are presented for predicting oscillatory frequency, pressure level, pressure spatial distribution in the cavity, and the degree of alleviation achievable with suppressors. The information is based on extensive experimentation with subscale models having apertures of 2 to 6 in. in a cold air wall-jet flow facility. A bibliography is included containing 145 listings. ON THE CALCULATION OF TRANSONIC BLADE TIP FLOW FOR HELICOPTER ROTORS [ZUR BERECHNUNG DER TRANSSONISCHEN BLATTSPITZENUMSTROEMUNG BEI HUBSCHRAUBERROTOREN]

H. Stahl and V. Mikulla 8 May 1981 27 p refs In GERMAN
Presented at DGLR Jahrestagung 1981, Aachen, 12-14 May 1981
(MBB-UD-320-81-O; DGLR-81-025) Avail: NTIS
HC A03/MF A01

Blade element theory (two dimensional) based on the rotor calculation program, its radials and its chronological relationship was demonstrated. Blade tip flow is three dimensional and interstationary and the forward moving blade in a fast forward flight becomes transonic. Theories, based on potential theory are proposed, though these do not perform on rotary wings. This method demonstrates the real flow rate. A three dimensional calculation of the aerodynamic characteristics of the fixed wings, was utilized, to show that by introducing a Mach number per gradient along the rotor radius, rotor calculation can be modified. Transl. by E.A.K.

THEORETICAL PREDICTION OF BASE PRESSURE ON MISSILE BODIES HAVING A TURBULENT DEAD-AIR REGION AT SUPERSONIC VELOCITIES

Mauri Tanner Nov. 1981 71 p refs Transl. into ENGLISH of "Theoretische Bestimmung des Basisdruckes von Flugkoerperruempfen mit turbulentem Totwasser bei Ueberschallgeschwindigkeiten" Rept. DFVLR-FB-80-29 DFVLR, Goettingen, West Germany, Sep. 1980 79 p

(ESA-TT-708; DFVLR-FB-80-29) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 13,60

A theory which predicts the base pressure and afterbody drag on axisymmetric missile bodies at supersonic velocities is presented. The body is assumed to have a turbulent dead air region behind the base. This theory extends the theory of Oswatitsch which connects the drag of the body with the antropy increase in the flow. Values for missile bodies at angles of incidence < or = 20 deg are approximated. Various calculation examples are shown and a comparison with experimental values shows good agreement between theory and measurement. Author (ESA)

Wind tunnel data for the ACES-B1 ejection seat in the presence of the B-1 forebody are documented and analyzed. Significant aerodynamic interactions exist at high speed between dual seats and between seat/forebody. Trajectory data are presented with and without the forebody effect upon the seat. The forebody flow field is shown to increase the human engineering/biomechanical problems during high-speed ejection.

The next generation combat aircraft with advanced aerodynamic and control features will have combat maneuver capability which will impose multiaxial accelerations on the aircrew. Advanced aircrew systems will be required for restraint, support, and mobility during these combat conditions. New concepts for these systems have been defined, but tests under representative dynamic conditions are necessary to evaluate the effectiveness of these concepts when implemented.

PHYSIOLOGICAL ACCEPTABILITY TESTS OF THE SJU-5/A EJECTION SEAT: SECOND PHYSIOLOGICAL ACCEPTANCE DEMONSTRATION Final Report
William C. Ward, Jr. and Kenneth L. Miller 1 Jul. 1981 23 p refs
(AD-A108688; NADC-81215-60) Avail: NTIS HC A02/MF A01 CSCL 01/3

This program was conducted to evaluate solutions to deficiencies of the F18 Aircraft Martin-Baker SJU-5/A escape system which had been identified during the initial Physiological Acceptability Demonstration (Report No. NADC-79040-60). The proposed solutions evaluated during this program included: incorporation of 'toe guides' on the rudder pedals, relocation of the head rest, modification of the back support, and incorporation of leg garters into the anti-'G' suit. Of these, the head rest and back support still require additional modification. Upon satisfactory correction of the head rest and back support deficiencies, physiological acceptance of the F18 escape system will be recommended for the pilot's station.

DISTRIBUTED INTELLIGENCE FOR AIR FLEET CONTROL

Interim Report
Randall Steeb, Stephanie Cammarata, Frederick A. Hayes-Roth, Perry W. Thorndyke, and Robert E. Wesson Jun. 1981 59 p refs
(Contract MDA903-78-C-0029; ARPA Order 3640)
(AD-A108611; RAND/R-2728-ARPA; LC-81-13913; ISBN-0-8330-0353-4) Avail: NTIS HC A04/MF A01 CSCL 17/7

Distributed planning and control techniques provide potential advantages over centralized processing in speed, cost, reliability, flexibility, and minimization of long-distance communications for a variety of tasks, including military threat assessment, command and control decisionmaking, disaster relief coordination, and civilian air traffic control. Six different architectures for distribution of control among multiple processors are presented, and the influences of different task environments on each are discussed. The work focuses primarily on the use of distributed planning and control for civilian air traffic control. One architecture, in which each aircraft is controlled by a separate processor, is described in detail in an illustrative scenario. An initial system design is presented in which cooperating 'experts' comprise a processor. These cooperating experts sense or infer aircraft intentions, generate and evaluate plans, control and monitor plan execution, and communicate with other processors.

IMPROVEMENTS AND EXTENSIONS OF THE GEOMETRICAL DILUTION OF PRECISION (GDOP) CONCEPT FOR SELECTING NAVIGATION MEASUREMENTS Final Report, 1 May 1980 - 1 May 1981
William L. Brogan Wright-Patterson AFB, Ohio AFWAL Sep. 1981 69 p refs
(Contract F33615-80-C-1092; AF Proj. 6095)
(AD-A108607; AFWAL-TR-81-1142) Avail: NTIS HC A04/MF A01 CSCL 17/7

The optimal measurement selection problem was studied for the Global Positioning Satellite system (GPS). The fundamentals of the Geometrical Dilution of Precision (GDOP) concept were briefly reviewed, because GDOP is frequently used to rank the effectiveness of potential measurements. It is shown that GDOP does not always select the best measurements in the sense of minimum mean square navigation error. For this reason weighted least-squares and minimum variance (Kalman filter) methods were used to derive several improved measurement ranking schemes. Nonuniform measurement noise and a prior knowledge about the state are taken into account. Any specified weighted combination of the component error variances can be minimized. Eigenvalue-eigenvector theory was used to derive useful bounds and to provide geometrical insight. A purely algorithmic approach is also presented and applied to a number of representative GPS cases.

A POSSIBLE WAY OF SPECIFICALLY CORRECTING LOCATION AND NAVIGATIONAL ERRORS CAUSED BY REFLECTION AND OTHER PROPAGATION ANOMALIES
Fritz Stelzel Jul. 1981 125 p refs Transl. into ENGLISH of "Uber eine Moeglichkeit zur gezielten Korrektur von Ortungs- u. Navigationsfehlern, die durch Reflexionen u. sonstige Ausbreitungsanomalien verursacht werden", Rept. DFVLR-Mitt-79-17 DFVLR, Oberpfaffenhofen, West Germany, May 1979
(ESA-TT-667; DFVLR-Mitt-79-17) Avail: NTIS HC A06/MF A01; DFVLR, Cologne DM 21.20

Electromagnetic wave propagation in urban areas is discussed in relation to vehicle location. Current methods are reviewed for vehicles on a arbitrary route. Isophase and hyperbola systems are compared. The isophase system is more accurate. A correction procedure for multipath induced errors is presented, based on measuring time signals from four transmitters. The use of measured times in order to reduce location errors caused by propagation anomalies is described. The methods were tested on a simulated city area covered by transmitters on the corners of a 25 km square. Results are inconclusive.

MIDAIR AND NEAR MIDAIR COLLISIONS ON TWO- AND THREE-DIMENSIONAL CURVILINEAR FLIGHT PATHS
Otto Weber Aug. 1981 119 p refs Transl. into ENGLISH of "Zusammenstoesse und gefaehrliche Begegnungen bei zwei- und dreidimensionalen Kurvenfluegen", Rept. DFVLR-FB-80-13 DFVLR, Brunswick, Mar. 1980 107 p
(ESA-TT-685; DFVLR-FB-80-13) Avail: NTIS HC A06/MF A01; DFVLR, Cologne DM 21

Collision avoidance by the see and avoid concept, advanced secondary radar systems on the ground, and independent electronic systems onboard are discussed. For two and three dimensional stationary turns, basic geometrical and physical aspects of conflict detection are derived and details are given on the apparent size and motion of the other aircraft on the windshield. For conflict warning by means of ground based or onboard electronic systems, a linear track model is used. The predicted minimum distance at the closest approach, the lead times to this event or to the penetration of a zone of protection around the intruder, and the zeta parameter are analyzed as potential conflict criteria. Similarity rules and the separation of three dimensional conflicts into horizontal and vertical problems are treated. Commercial pilots lack special training in optically based risk assessment. Autonomous onboard warning systems do not make the see and avoid concept obsolete. Author (ESA)

A STUDY TO DEFINE THE RESEARCH AND TECHNOLOGY REQUIREMENTS FOR ADVANCED TURBO/PROPFAN TRANSPORT AIRCRAFT Final Report
Irene M. Goldsmith Feb. 1981 313 p refs
(Contract NAS2-10078)
(NASA-CR-166138; ACEE-16-FR-0016) Avail: NTIS HC A14/MF A01 CSCL 01C

The feasibility of the propfan relative to the turbofan is summarized, using the Douglas DC-9 Super 80 (DS-8000) as the actual operational base aircraft. The 155 passenger economy class aircraft (31,775 lb [14,413 kg] payload), cruise Mach at 0.80 at 31,000 ft (8,450 m) initial altitude, and an operational capability in 1985 was considered. Three propfan arrangements, wing mounted, conventional horizontal tail aft mounted, and aft fuselage pylon mounted are selected for comparison with the DC-9 Super 80 P&WA JT8D-209 turbofan powered aircraft. The configuration feasibility, aerodynamics, propulsion, structural loads, structural dynamics, sonic fatigue, acoustics, weight maintainability, performance, rough order of magnitude economics, and airline coordination are examined. The effects of alternate cruise Mach number, mission stage lengths, and propfan design characteristics are considered. Recommendations for further study, ground testing, and flight testing are included.

SLOTTED VARIABLE CAMBER FLAP Patent Application
Dana G. Andrews, inventor (to NASA) (Boeing Commercial Airplane Co., Seattle) Filed 30 Oct. 1981 13 p Sponsored by NASA
(NASA-Case-LAR-12541-1; US-Patent-Appl-SN-315588) Avail: NTIS HC A02/MF A01 CSCL 01C

Variable camber actuator assemblies broaden the range of speeds at which lift to drag performance is maximized for slotted flap wings. Lift is improved by varying wing camber with rotational flap movements that do not introduce wing slots and induced drag. Forward flaps are secured to forward flange links which extend from, and are a part of, forward flap linkage assemblies. The forward flaps rotate about flap pivots with their rotational displacement controlled by variable camber actuator assemblies located between the forward flaps and the forward flange links. Rear flaps are held relative to the forward flaps by rear flap linkage assemblies which may act independently from the forward flap linkage assemblies and the variable camber actuator assemblies. Wing camber is varied by rotating the flaps with the variable camber actuator assemblies while the flaps are in a deployed or tucked position. Rotating flaps in a tucked position does not introduce significant wing surface discontinuities, and reduces aircraft fuel consumption on most flight profiles. NASA

N82-18204*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.
DYNAMICS OF AIRCRAFT ANTISKID BRAKING SYSTEMS
John A. Tanner, Sandy M. Stubbs, Robert C. Dreher, and Eunice G. Smith Feb. 1982 100 p refs
(NASA-TP-1959; L-14788) Avail: NTIS HC A05/MF A01 CSCL 01C

A computer study was performed to assess the accuracy of three brake pressure-torque mathematical models. The investigation utilized one main gear wheel, brake, and tire assembly of a McDonnell Douglas DC-9 series 10 airplane. The investigation indicates that the performance of aircraft antiskid braking systems is strongly influenced by tire characteristics, dynamic response of the antiskid control valve, and pressure-torque response of the brake. The computer study employed an average torque error criterion to assess the accuracy of the models. The results indicate that a variable nonlinear spring with hysteresis memory function models the pressure-torque response of the brake more accurately than currently used models.

XFV-12A DIAGNOSTIC AND DEVELOPMENT PROGRAMS Summary Report, Jan. 1979 - May 1981
P. M. Bevilaqua and C. P. Combs Nov. 1981 367 p refs
(Contract N00019-73-C-0053)
(AD-A108354; NR81H-50) Avail: NTIS HC A16/MF A01 CSCL 01/3

Activity during the XFV-12A thrust augmenter development program conducted from May 1979 to June 1981 is reported and documented. Diagnostic tests indicated a major source of performance deficiency could be attributed to feed duct/augmenter component interface problems rather than basic augmenter configuration. Interface problems seriously affected both isolated performance and flow quality of the primary augmenter nozzles resulting in significantly low levels of augmentation. A remedial program, the subject of this report, was initiated. The primary objective of this program was to systematically improve the performance of the XFV-12A aircraft's thrust augmenter lift systems. Major emphasis was placed not only on correcting flow deficiencies but also identifying and incorporating improvements in the augmenter design which would increase its performance potential.

POTENTIAL REDUCTIONS IN AIRCRAFT OPERATION AND MAINTENANCE COSTS BY USING THRUST COMPUTING SUPPORT EQUIPMENT Report to the Honorable Joseph P. Addabbo, Chairman, Subcommittee on Defense, Committee on Appropriations, House of Representatives
27 Oct. 1981 17 p
(AD-A108463; GAO/PLRD-82-4) Avail: NTIS HC A02/MF A01 CSCL 01/2

This report addresses the evaluation of thrust measuring equipment. We interviewed Air Force officials and contractor representatives, reviewed documentation pertaining to the key events in the evaluation of the thrust computing system program, reviewed test data and analyses by Air Force and contractor engineers, and observed the operation of the thrust computing system. Our analyses show that the accurate measurement and setting of thrust for installed jet engines is of vital importance not only for aircraft readiness and safety but also for operation and maintenance cost reductions. Although test results indicate that a system is available that can perform such measurements, the services have not been using it. The Air Force has conducted extensive tests that will measure thrust for installed J85-5 engines, but has not implemented a system. The Navy has not performed any tests to determine whether its aircraft jet engines might benefit from such a system.

C-5A AUSTERE AIRFIELD OPERATIONAL UTILITY EVALUATION. PHASE 2: OPERATION ON UNPAVED SOIL SURFACES FOLLOWING RAINFALL Final Report
Waldemar O. Breuhaus Oct. 1981 46 p refs
(Contract MDA903-79-C-0018)
(AD-A108597; AD-E500466; IDA-P-A1621; IDA/HQ-81-23896) Avail: NTIS HC A03/MF A01 CSCL 01/3

During the summer of 1980 and the winter of 1980-1981, an Operational Utility Evaluation (OUE) was conducted to determine operating characteristics of the C-5A airplane when taxiing or being towed and off-loaded on unpaved soil surfaces and on snow-covered surfaces. Subsequent to the successful completion of those tests, questions arose concerning the effects of rainfall that wets otherwise adequate bare soil areas to a significant depth. Tests with simulated rainfall of various amounts applied by agricultural sprinkler systems were conducted at March AFB, California, during July 1981. The airplane performed well, though it approached its performance limits in the most severe test conditions. Difficulties were encountered in arriving at a sprinkler system configuration reasonably approximating naturally occurring rainfall, and in arriving at a single simple descriptor to properly characterize the strength of soil in such a complex situation.

VIBRATION LEVELS IN ARMY HELICOPTERS: MEASUREMENT RECOMMENDATIONS AND DATA Final Report
John C. Johnson and David B. Priser Sep. 1981 35 p refs (DA Proj. 3E1-6277-A-878)
(AD-A108131; USAARL-81-5) Avail: NTIS HC A03/MF A01 CSCL 01/3

Surveys on vibration levels found in currently fielded helicopters were used to prepare a comparative summary of vibration exposure levels at crew stations and of the test methods used to measure these levels. This effort was initiated at the request of the Air Standardization Coordinating Committee (ASCC) Working Party 61 and because of the wide variety of methods used in data capture and instrumentation documentation. Sources of the literature reviewed included technical reports of U.S. Government agencies and papers in open literature. Articles were reviewed based upon three criteria: (1) quantitative description of vibration in currently fielded U.S. Army rotary winged aircraft, (2) article contents are unclassified and available for publication in open literature, (3) article describes human exposure levels of aircraft vibration. TENDENCIES IN THE DEVELOPMENT OF SUBSONIC TRANSPORT AIRCRAFT WITH SPECIAL CONSIDERATION OF AERODYNAMICS
Horst Koerner Oct. 1981 42 p refs Transl. into ENGLISH of "Entwicklungstendenzen bei Unterschall-Transportflugzeugen unter besonderer Beruecksichtigung der Aerodynamik", Rept. DFVLR-Mitt-80-15 Brunswick, Jun. 1981 62 p
(ESA-TT-705; DFVLR-Mitt-80-15) Avail: NTIS HC A03/MF A01

Tendencies in subsonic transport aircraft development, specifically due to progress in aerodynamics, are surveyed. Prospective wing profile designs and improved integration of body dimensions are considered, citing examples from the AIRBUS development program. Possible fuel savings through supercritical wing technology and by optimizing reduction in friction drag are also studied. Advantages to be gained by active control, particularly from adaptive wing technology, are reviewed. As a potential application, an unconventional canard configuration, including transonic propellers, for an aircraft in the AIRBUS class is proposed. Author (ESA)

NEW DEVELOPMENTS IN COCKPIT-HUMAN INTERFACES
E. B. Davies and J. B. Peckham 15 Jun. 1981 16 p Presented at 12th ICAS Congr., Munich, Oct. 1980
(RAE-TM-FS-412; BR80500) Copyright. Avail: Issuing Activity

Touch sensing displays, helmet sights, and direct voice inputs (DVI) are discussed. Cathode ray tubes (CRT) are cheaper than keyboards for touch sensing, but lack tactile differentiation capabilities. For designation tasks, e.g., touching the required radar return, accuracy must be much higher than for keyboarding. Head movement filtering is a problem with helmet sights, since output is delayed if too much filtering is attempted, and accuracy suffers if vibration is ignored. Cuing by LED's is restricted by the number of leads the helmet can incorporate, and CRT's are too heavy. Factors affecting DVI performance include electronic noise on intercoms, microphone to mouth distance, voice changes caused by stress, and the number of commands pilots can remember. Author (ESA)

AN ON BOARD SUPERVISORY SYSTEM FOR APPLICATIONS IN SPACE MISSIONS [UM SISTEMA DE SUPERVISAO DE BORDO PARA APLICACOES EM MISSOES ESPACIAIS]
Jose Carlos Maldonado and Ricardo deAzevedo Mendes Jun. 1981 13 p refs In PORTUGUESE; ENGLISH abstract Presented at the 2nd Natl. Automation Meeting, Salvador, Bahia, Brazil, Jul. 1981
(INPE-2097-RPE/327) Avail: NTIS HC A02/MF A01

The system, developed in the digital and analog system group/program, enables full duplex communication between an onboard and a ground microcomputer, based on a reserved protocol. The system performs the following functions: data acquisition, control, transmission and reception between an onboard payload and a ground station. It also executes housekeeping tasks and telecommand operations. This systems was, in particular, utilized in the balloon mission PEROBA-I. The performance of the system in the mission was satisfactory. T.M.

ANALYSIS OF BUILT-IN-TEST (BIT) FALSE ALARM CONDITIONS Final Technical Report, 24 Jan. 1980 - 28 Feb. 1981
John G. Malcolm and Richard W. Highland Griffiss AFB, N.Y. RADC Aug. 1981 122 p refs
(Contract F30602-80-C-0074; AF Proj. 2338)
(AD-A108752; RADC-TR-81-220) Avail: NTIS HC A06/MF A01 CSCL 14/2

Usefulness of BIT is seriously affected by the presence of false alarms. False alarms can degrade mission effectiveness of systems and contribute to the expenditure of excessive maintenance resources. The objectives of this study were to determine the root causes of the false alarm problem and to develop design guidelines to minimize the occurrence and the effect of false alarms. False alarm rates have been established for the three systems investigated and prediction factors defined. Author (GRA)

An assessment is made of cockpit information requirements likely to be imposed on aircraft in the next fifteen years as a result of improvements in the ATC system and in aircraft design. These requirements are analyzed by work centers and include flight control, navigation, collision avoidance, flight management, communications, caution/warning and monitoring, and checklist functions. From a baseline of current requirements and technology, the application of new requirements and technology is analyzed. Three aircraft are hypothesized representing three time periods of technical development. The purpose is to investigate the impact of future ATC changes on differently equipped aircraft. GRA

IMPACT OF TECHNOLOGY ON AVIONICS COST TRENDS
Steven Toth, William Lovelace, and Kelly Markin Nov. 1981 84 p
(Contract DTFA-01-80-C-10030)
(AD-A108494; Rept-1378-40-2-2553; FAA-EM-82-6) Avail: NTIS HC A05/MF A01 CSCL 09/3

This study provides an overview of nonmilitary generally aviation and commercial avionics price and cost structures as influenced by technology. It quantifies, computes, and evaluates the unique characteristics and behavior patterns of the industry, especially those that affect the frequency of innovation, the rate of technology diffusion from manufacturer to manufacturer or from product to product, and the anticipated major cost drivers of the future. The report reviews the impact of technology on the cost of avionics during the past 20 years and projects this impact for the next 20 years. This report concentrates on avionics in the low-performance general aviation aircraft category because they are the major components of the avionics industry. Typical units of detailed study are transponders, transceivers, navigation receivers, and course deviation indicators (CDIs). An examination of the price histories of more than twenty equipment families indicates that unit prices have been and are likely to continue increasing at the Producer Price Index (PPI) rate. This rate of price growth results from a balance between costs rising at the Consumer Price Index (CPI) rate and manufacturing cost reductions made possible through the introduction of new technologies. TRENDS IN AIRLINE AVIONICS
F. J. Abbink 13 Mar. 1980 30 p refs Presented at Netherlands Assoc. of Aeron. Engr. Symp. on Develop. in Avionics, Delft, 25 Apr. 1980
(NLR-MP-80013-U) Avail: NTIS HC A03/MF A01

The evolution of aeronautical electronics is described. Trends towards system integration for airliners are indicated. The development of airline avionics specifications by the airlines and constructors is outlined. The design and function of avionics equipment, e.g., navigation aids, are explained. The Aeronautical Radio Incorporated 700 automatic flight system is introduced as an example of a system suited to the next generation of

airliners. Radio navigation, communication and identification equipment are controlled by the digital frequency/function selection unit. Automatic flight control and auto-throttle functions are executed by flight control and thrust control computers.

Equipment for electrical and avionic systems, and special equipment needed in the airplane program were developed. Avionics is defined as: airplane structure, airplane equipment (besides the mechanical system) includes that part of the equipment system which is supported by the electric and electronic system, and construction and general instruments necessary in airplane construction. Avionics enables the supply, transfer, processing, and production (activation) of information for the management of airplane systems, control of airplanes, and the execution of special functions. EFFECTS OF FAN INLET TEMPERATURE DISTURBANCES ON THE STABILITY OF A TURBOFAN ENGINE
Mahmood Abdelwahab Dec. 1981 36 p refs
(NASA-TM-82699; E-982) Avail: NTIS HC A03/MF A01 CSCL 21E

The effects of steady-state and time-dependent fan inlet total temperature disturbances on the stability of a TF30-P-3 turbofan engine were determined. Disturbances were induced by a gaseous-hydrogen-fueled burner system installed upstream of the fan inlet. Data were obtained at a fan inlet Reynolds number index of 0.50 and at a low-pressure-rotor corrected speed of 90 percent of military speed. All tests were conducted with a 90 deg extent of the fan inlet circumference exposed to above-average temperatures.

A total systems approach methodology and computer-aided design tool for integrated flight control design and evaluation has been formulated. This methodology is a composition of classical system design steps and system performance, reliability/survivability, packaging and cost evaluation techniques assembled for interactive computer-based execution. The interactive sensor integration program developed under this methodology addresses the sensor requirements of the flight control, guidance and navigation, and weapon delivery functions as directed interactively by the designer and the mission, the system configuration, cost, power, weight, volume constraints and total system performance. The demonstration program contains performance reliability, size, power, weight, cost data for gyros, accelerometers, radars, seekers and air data systems in addition to analysis tools for evaluating navigation system accuracy, probability of target acquisition, and probability of kill for selected targets and weapons. INVESTIGATION INTO THE UTILITY OF SOME QUICK SETTING CEMENTS FOR RUNWAY REPAIR [ONDERZOEK NAAR DE BRUIKBAARHEID VAN ENKELE SNELVERHARDENDE BINDMIDDELEN VOOR REPARATIE VAN STARTBANEN]
Mar. 1980 39 p refs In DUTCH
(B-80-157/60.7.0157; TDCK-75056) Avail: NTIS HC A03/MF A01

The application of quick setting cements in rapid runway repair was investigated. Needed strength and layer thickness of the hardening material was determined. The following results are reported: (1) it is possible to fill up a hollow space with quick setting cements, even in combination with proper additives like super plastifiers; (2) pressure strength for hardening time is accomplished within one hour; (3) a fast operating method is needed to prevent debinding of cement, continuous mixers for smaller quantities are recommended. THE LINK-HILES DRIVER TRAINING SIMULATOR FOR TRACKED VEHICLES: THE EFFECT OF METHOD AND DURATION OF TRAINING ON THE TRANSFER OF TRAINING
K. J. Poll 1980 20 p refs In DUTCH; ENGLISH summary
(Contract A76/KL/148)
(IZF-1980-28; TDCK-75019) Avail: NTIS HC A02/MF A01

Transfer of training through different methods and durations of training from a driving simulator to a task was investigated. In method A the candidates were under strict guidance of the instructor, while in method B the candidates trained more on their own and paid more attention to the integration of the part-tasks. The duration of training was dependant on the performance-level on which the candidate turned over from the simulator to the real tanks. These performance-levels were: the single trial execution of all tasks (low level), having all tasks under control (medium level), and sufficient integration of all part-tasks (high level). From the results it is clear that when the candidates were trained in pairs the mean number of kilometers for the two candidates shows to difference as a function of training method. Although the 'first' candidate needs less kilometers with method B, and 'second' candidate learns more from the 'first' with method A. The number of kilometers on the tank, necessary to pass the final driver's test, is a linear relation as a function of the duration of simulator training. J.M.S.

TASK ANALYTIC TECHNIQUES: APPLICATION TO THE DESIGN OF A FLIGHT SIMULATOR INSTRUCTOR/OPERATOR CONSOLE Final Report
Charles D. Sanders Brooks AFB, Tex. Air Force Human Resources Lab. Dec. 1981 21 p refs Prepared for Southeastern Center for Electrical Engineering Education, St. Cloud, Fla. Submitted for publication
(Contract F49620-79-C-0038; AF Proj. 9983)
(AD-A108724; AFHRL-TP-81-38) Avail: NTIS HC A02/MF A01 CSCL 14/2

Instructional Systems Development (ISD) has contributed to the efficiency and low cost of air flight training through the medium of the simulator. Task analysis is a component of ISD, and its application to the improvement of devices such as simulator instructor/operator consoles will continue to enhance the quality of flight training. Task analytic techniques are inextricably interwoven into the design of an instructor/operator console. The application involves the process, persons, and a machine within the context of a flight simulator. The tasks of the instructor and student are primary in the design process. The efficiency and economy of the task analytic process has implications for its use in the future developments of automated flight training. Author (GRA)

(Contract N00014-80-C-0696; SRI Proj. PYU-1943)
(AD-A108740) Avail: NTIS HC A08/MF A01 CSCL 05/9

Under Executive Order 11752, the Navy and the Air Force began a cooperative effort to develop training facilities that could provide more fire fighting training with less smoke and water pollution. Soon the central issue of pollution control was surrounded by a series of satellite questions that had to be answered before training facilities could be designed, e.g., what type of training is required; how much training should be provided; where should fireman train; and how much departure from the real emergency situation is permissible. Various public and private groups contributed answers. The Naval Air Station, North Island, San Diego, Calif., Aircraft/Crash Fire Rescue Training Facility is the first Navy facility constructed as an outgrowth of this effort to improve training while reducing the environmental impact to an acceptable level. This report evaluates the performance of the North Island facility in a series of environmental and training tests. The scope includes: (1) the evaluation procedure and results; (2) a comparison to other training options; and (3) recommendations for future training activity. GRA

BOMB CRATER REPAIR TECHNIQUES FOR PERMANENT AIRFIELDS. REPORT 1: SERIES 1 TESTS Technical Report, Jul. - Nov. 1978
David L. Cooksey Oct. 1981 129 p refs
(AD-A108716; WES/MP/GL-81-12) Avail: NTIS HC A07/MF A01 CSCL 13/2

A test section with six simulated bomb craters was constructed for the purpose of developing an improved field method of repair and restoration of air base runways damaged by enemy attack. The crater repair materials tested in the reconstruction were a high-quality crushed stone, grouted concrete, portland cement concrete (PCC), and asphaltic concrete (AC). The performances of the different materials were evaluated under full-scale load testings with the F-4 and C-141 aircraft loadings. The gravity grout solution and the high-quality crushed stone method performed beyond required coverage levels and seem to be the two high candidate material systems for further research. The solutions were accomplished with the time, manpower, equipment, and performance constraints of operational requirements. GRA

INVESTIGATION OF COMPACTION CRITERIA FOR AIRPORT PAVEMENT SUBGRADE SOILS Final Report, Mar. 1978 - Apr. 1981
William N. Brabston Washington, D.C. FAA Oct. 1981 174 p refs
(Contract DOT-FA78WAI-876)
(AD-A108518; WES/TR/GL-81-11; FAA-RD-81-48) Avail: NTIS HC A08/MF A01 CSCL 08/13

A study was conducted to determine the effect of lowering soil density requirements for subgrades under airport pavements. The investigation was primarily a laboratory effort in which molded specimens of three different soil types, compacted to densities at and below those currently specified by FAA criteria, were subjected to repeated axial loadings in a triaxial compression chamber. The primary response parameters of interest were permanent and resilient axial strain. Test results were formulated into a statistical model to predict permanent soil strain based on soil characteristics such as density, clay content, compaction characteristics, and shear strength. The strain model was used to calculate values of permanent soil deformation at the surface of the subgrade for various combinations of soil density. Results of the test indicated that the wide variation in soil response among the three materials tested precluded any general alteration in current FAA compaction criteria. Author (GRA)

ROTORCRAFT FLIGHT SIMULATION COMPUTER PROGRAM C81 WITH DATAMAP INTERFACE. VOLUME 2: PROGRAMMER'S MANUAL Final Report
P. Y. Hsieh Oct. 1981 264 p Supersedes USAAMRDL-TR-76-41A, USAAMRDL-TR-76-41B, and USAAMRDL-TR-76-41C
(Contract DAAK51-79-C-0015; DA Proj. 1L1-62209-AH-76)
(AD-A108294; BHT-699-099-111-Vol-2; USAAVRADCOM-TR-80-D-38B; USAAMRDL-TR-76-41A; USAAMRDL-TR-76-41B; USAAMRDL-TR-76-41C) Avail: NTIS HC A12/MF A01 CSCL 09/2

This report documents the current version in the C81 family of rotorcraft flight simulation programs developed by Bell Helicopter Textron. This current version of the digital computer program is referred to as AGAP80. The accompanying program for calculating fully coupled rotor blade mode shapes is called DNAM05, and an associated rotor wake program is called AR9102. The AGAP80 version of C81 was developed by adding some analytical features to the AGAJ76 version and including the ability to generate Data Transfer Files for use by the File Creation Program of DATAMAP. An overview of the computer program capabilities and the principal mathematical models incorporated in the program are given in Volume I of the documentation for the AGAJ76 version of the program. Volume I, the User's Manual, contains detailed information necessary for setting up an input data deck and interpreting the computed data. Volume II, includes a catalog of subroutines and a discussion of programming considerations. GRA

The purpose of space experiments with particle accelerators (SEPAC) is to carry out active and interactive experiments on and in the Earth's ionosphere and magnetosphere. It is also intended to make an initial performance test for an overall program of Spacelab/SEPAC experiments. The instruments to be used are an electron beam accelerator, magnetoplasma dynamic arcjet, and associated diagnostic equipment. The accelerators are installed on the pallet, with monitoring and diagnostic observations being made by the gas plume release, beam-monitor TV, and particle-wave measuring instruments also mounted on the pallet. Command and display systems are installed in the module. Three major classes of investigations to be performed are vehicle charge neutralization, beam plasma physics, and beam atmosphere interactions. The first two are mainly onboard plasma physics experiments to measure the effect of phenomena in the vicinity of Spacelab. The last one is concerned with atmospheric modification and is supported by other Spacelab 1 investigations as well as by ground-based, remote sensing observations. A.R.H.

PHENOMENA INDUCED BY CHARGED PARTICLE BEAMS c72
C. Beghin *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)
Avail: NTIS HC A08/MF A01 CSCL 20H

The injection of energetic particles along the Earth's magnetic field lines is a possible remote sensing method for measuring the electric fields parallel to the magnetic field with good time resolution over the entire magnetic field. Neutralization processes, return-current effects, dynamics of the beams, triggered instabilities, and waves must be investigated before the fundamental question about proper experimental conditions, such as energy, intensity and divergence of the beams, pitch-angle injection, ion species, proper probes and detectors and their location, and rendezvous conditions, can be resolved. An experiment designed to provide a better understanding of these special physical processes and to provide some answers to questions concerning beam injection techniques is described. A.R.H.

DC-MAGNETIC FIELD VECTOR MEASUREMENT c46
R. Schmidt *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 2 p (For primary document see N82-18234 09-12)
Avail: NTIS HC A08/MF A01 CSCL 08N

A magnetometer experiment was designed to determine the local magnetic field by measuring the total of the Earth's magnetic field and that of an unknown spacecraft. The measured field vector components are available to all onboard experiments via the Spacelab command and data management system. The experiment consists of two parts, an electronic box and the magnetic field sensor. The sensor includes three independent measuring flux-gate magnetometers, each measuring one component. The physical background is the nonlinearity of the B-H curve of a ferrite material. Two coils wound around a ferrite rod are necessary. One of them, a tank coil, pumps the ferrite rod at approximately 20 kilohertz. As a consequence of the nonlinearity, many harmonics can be produced. The second coil (i.e., the detection coil) resonates to the first harmonic. If an unknown dc or low-frequency magnetic field exists, the amplitude of the first harmonic is a measure for the unknown magnetic field. The voltages detected by the sensors are to be digitized and transferred to the command and data management system.

ISOTOPIC STACK - MEASUREMENT OF HEAVY COSMIC RAY ISOTOPES

c93

R. Beaujean *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 03B

Heavy cosmic ray nuclei with nuclear charge, Z, equal to or greater than 3 are to be measured using an isotopic stack consisting of passive visual track detectors which remain sensitive throughout the entire mission. The scientific data are stored in latent tracks which are produced by heavy ions and which can be revealed in the investigator's laboratory after recovery. During the mission, only housekeeping data have to be collected. The exposure onboard Spacelab 1 allows the study of the chemical composition and energy spectrum of articles which have energies in the range 20 to 100 million electron volts per atomic mass unit, as well as the isotopic composition of heavy galactic cosmic rays with energies in the range 100 to 1000 million electron volts per atomic mass unit.

FAR ULTRAVIOLET ASTRONOMY USING THE FAUST TELESCOPE

c89

C. S. Bowyer *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 03A

The Far Ultraviolet Space Telescope (FAUST) a compact, wide field-of-view, far ultraviolet instrument designed for astronomical observations of extended and point sources is discussed. The design and application of the instrument are described. The prime objective is to observe faint astronomical sources with sensitivities higher than previously available. Scientific programs will include: (1) a search for ultraviolet stars which are predicted to exist at the stage of evolution prior to the final death of a star; (2) observations of galaxies and quasars; and (3) joint programs with other Spacelab 1 experiments. The secondary objective is to verify the suitability of the Spacelab as a platform for far ultraviolet astronomy: data will be provided on the ultraviolet background levels due to astronomical, terrestrial, and spacecraft generated sources; the levels of contaminants which affect ultraviolet instruments; and the capability of the Orbiter for stable pointing at celestial sources for useful periods of time.

ACTIVE CAVITY RADIOMETER

c35

R. C. Willson *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 4 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 14B

The active cavity radiometer (ACR) experiment on the Spacelab 1 mission to measure the total solar irradiance is discussed. Short and long term variations in the total solar output of optical energy are studied. Solar total irradiance observation provides information on the solar cycle and other long term trends in solar output that are of climatological significance as well as short term solar physics phenomena. The interaction of solar radiation with the Earth's atmosphere, oceans, and land masses provides the primary driving forces for the formation of weather systems and the determination of climate. Astrophysical measurements determine the total energy flux. The principal role of the ACR observations support extended solar irradiance experiments on free flying satellites. Solar irradiance measurements are important in the establishment of the radiation scale at the solar total flux level in the international system of units (SI). E.A.K.

MEASUREMENT OF THE SOLAR CONSTANT c92

D. Crommelynck *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 03B

The absolute value of the solar constant and the long term variations that exist in the absolute value of the solar constant were measured. The solar constant is the total irradiance of the Sun at a distance of one astronomical unit. An absolute radiometer removed from the effects of the atmosphere with its calibration tested in situ was used to measure the solar constant. The importance of an accurate knowledge of the solar constant is emphasized. E.A.K.

N82-18254*# Centre National de la Recherche Scientifique, Paris (France).

SOLAR SPECTRUM FROM 170 TO 3200 NANOMETERS c92

G. Thuiller *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 03B

The spectral irradiance of the Sun between 170 and 3200 nanometers was measured to determine accurately the solar constant, its possible variation with the solar cycle, and the wavelength range responsible for the observed variations. It is pointed out that measurements over very long time periods (10 years) involving flights of the same instrument on future Spacelab missions will be required. Few spectral solar irradiation measurements ranging from the near ultraviolet to the near infrared have been performed yet. The most extensive solar irradiation measurements were obtained by a spectrometer onboard an aircraft or from high altitude observatories. The full disk irradiation flux was measured, corrections for atmospheric absorption are applied in all of the measurements. E.A.K.

EFFECTS OF RECTILINEAR ACCELERATION, OPTOKINETIC AND CALORIC STIMULI IN SPACE c52

R. vonBaumgarten *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 5 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 06P

The set of experiments comprising the Spacelab 1ES201 package designed to investigate the human vestibular system and equilibratory function in weightlessness are described. The specific objectives of the experiments include: (1) the determination of the threshold of perception of linear oscillatory motion; (2) measurement of physiological and subjective responses to supra threshold, linear and angular motion stimuli; (3) study of the postural adjustments, eye movements, and illusions of attitude and motion evoked by optokinetic stimuli, (i.e., moving visual patterns) in order to assess visual/vestibular interactions; (4) examination of the effect of thermal stimulations of the vestibular apparatus to determine if the eye movements elicited by the 'caloric test' are used by a density gradient in the semicircular canal; and (5) investigation of the pathogenesis of space motion sickness by recording signs and symptoms during the course of vestibular stimulation and, specifically, when the test subject is exposed to sustained, linear ocillatory motion. M.G.

N82-18256*# Massachusetts Inst. of Tech., Cambridge.

VESTIBULAR EXPERIMENTS c52

L. R. Young *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 5 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 06P

Spacelab experiments designed to investigate space motion sickness, any associated changes in otolith-mediated responses occurring during weightlessness, and the carryover of any such changes to postflight conditions are described. The experiments aimed at assessing otolithic responses in space are intended to clarify presumed alterations in vestibular function during weightlessness. Vestibular function will be investigated at several levels: vestibulo-ocular reflexes, vestibulo-spinal pathways, cortical functions involving perception of motion and spatial orientation, visual vestibular interaction, and motion sickness susceptibility. A second major objective relates to space motion sickness and man's well-being and productivity in space. M.G.

VESTIBULO-SPINAL REFLEX MECHANISMS c52

M. F. Reschke *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 2 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 06P

The specific objectives of experiments designed to investigate postural reflex behavior during sustained weightlessness are discussed. The first is to investigate, during prolonged weightlessness with Hoffmann response (H-reflex) measurement procedures, vestibulo-spinal reflexes associated with vestibular (otolith) responses evoked during an applied linear acceleration. This objective includes not only an evaluation of otolith-induced changes in a major postural muscle but also an investigation with this technique of the adaptive process of the vestibular system and spinal reflex mechanisms to this unique environment. The second objective is to relate space motion sickness to the results of this investigation. Finally, a return to the vestibulo-spinal and postural reflexes to normal values following the flight will be examined. The flight experiment involves activation of nerve tissue (tibial N) with electrical shock and the recording of resulting muscle activity (soleus) with surface electrodes. Soleus/spinal H-reflex testing procedures will be used in conjuction with linear acceleration through the subject's X-axis. M.G.

N82-18258*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

THE INFLUENCE OF SPACE FLIGHT ON ERYTHROKINETICS IN MAN c52

Carolyn S. Leach *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 06S

An experiment is described the purpose of which is to measure specific factors relative to the control of erythrokinetics in man which might be altered during the first seven days of exposure to the weightless environment of space flight. It is anticipated that these data will provide information relative to the mechanism by which the red cell mass is reduced during space flight. Specifically, the experiment is designed to establish: (1) if there is a significant change in red cell mass and plasma volume during the initial period of exposure to weightlessness; (2) if the plasma concentration of erythropoietin is reduced; (3) if there is an increase in the plasma concentration of erythropoietin inhibitors; (4) if there is a change in the effectiveness of erythropoiesis; and (5) if the number and age distribution of reticulocytes are altered. M.G.

MEASUREMENT OF CENTRAL VENOUS PRESSURE AND DETERMINATION OF HORMONES IN BLOOD SERUM DURING WEIGHTLESSNESS c52

K. Kirsch *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 2 p (For primary document see N82-18234 09-12)

Avail: NTIS HC A08/MF A01 CSCL 06P

A Spacelab experiment is described which proposes to obtain data on the degree of engorgement of the cephalad circulation during weightlessness by recording central venous pressure. Of practical importance is the question of how close the astronauts are to pulmonary edema and whether the pressure falls toward normal during the time of the mission. Another experiment to investigate deviations from normal fluid and mineral metabolism,

possibly initiated by the central engorgement of the low pressure system, is discussed. Hormones responsible for the control of water and mineral balance (vasopressin, catecholamines, renin, aldosterone, corticosteroids, and prostaglandin E1) will be analyzed from blood samples.

EFFECT OF WEIGHTLESSNESS ON LYMPHOCYTE PROLIFERATION c52
Autusto Cogoli *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 4 p (For primary document see N82-18234 09-12)
Avail: NTIS HC A08/MF A01 CSCL 06P

An experiment to study the effect of weightlessness on lymphocyte proliferation to detect possible alteration of the cells responsible for the immune response during long-duration space flights is described. Human lymphocytes in culture medium will be delivered shortly before launch in an incubator which will be kept at 37C. Mitogen will be added to the culture. A control without mitogen will be run in parallel. After 70 hours of incubation, radioactive thymidine will be added. After two hours, cellular activity will be stopped by fixation and incubator power switched off. Later, the amount of incorporated thymidine will be determined and the cell morphology and the distribution of cell organelles will be investigated.

PERSONAL MINIATURE ELECTROPHYSIOLOGICAL TAPE RECORDER c35
H. Green *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 2 p (For primary document see N82-18234 09-12)
Avail: NTIS HC A08/MF A01 CSCL 14E

The use of a personal miniature electrophysiological tape recorder to measure the physiological reactions of space flight personnel to space flight stress and weightlessness is described. The Oxford Instruments Medilog recorder, a battery-powered, four-channel cassette tape recorder with 24 hour endurance is carried on the person and will record EKG, EOG, EEG, and timing and event markers. The data will give information about heart rate and morphology changes, and document adaptation to zero gravity on the part of subjects who, unlike highly trained astronauts, are more representative of the normal population than were the subjects of previous space flight studies. R.J.F.

MASS DISCRIMINATION DURING WEIGHTLESSNESS c52
Helen Ross *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p (For primary document see N82-18234 09-12)
Avail: NTIS HC A08/MF A01 CSCL 06S

An experiment concerned with the ability of astronauts to discriminate between the mass of objects when both the objects and the astronauts are in weightless states is described. The main object of the experiment is to compare the threshold for weight-discrimination on Earth with that for mass-discrimination in orbit. Tests will be conducted premission and postmission and early and late during the mission while the crew is experiencing weightlessness. A comparison of early and late tests inflight and postflight will reveal the rate of adaptation to zero-gravity and 1-g. The mass discrimination box holds 24 balls which the astronaut will compare to one another in a random routine.

AN ADAPTIVE SATELLITE ORBIT ESTIMATION SCHEME USING AN ANALYTICAL APPROACH AND A DYNAMICAL MODEL COMPENSATION TECHNIQUE

Atair Rios Neto and Ricardo Negreiros dePaiva Jan. 1982 23 p refs Presented at the Intem. Symp. and Workshop on the Motion of Planets and Satellites, Sao Paulo, Brazil, 14-18 Dec. 1981

(INPE-2304-PRE/072) Avail: NTIS HC A02/MF A01

An Earth satellite orbit estimation procedure for real time applications is presented. A perturbed two body physical model is considered for the satellite equations of motion in the mathematical model of the estimator. Using the KS transformation, an analytical solution is obtained in the correspondent parametric transformed space. The perturbations in the Keplerian motion are treated, in the parametric space, as unmodeled accelerations. A dynamical model compensation technique approximates each component of these accelerations by a first order Gauss-Markov process. These accelerations are estimated along with the satellite motion by the definition of an extended state, using the extended Kalman filter. During the estimation process, the observations nonlinearities and the state noise covariance matrix are adaptively determined to prevent filter divergence. Results of numerical tests under simulated conditions are presented and discussed. Author

A RAPID ESTIMATION OF NEAR EARTH SATELLITE LIFETIMES WITH QUASI-DYNAMIC ATMOSPHERE MODEL WITH APPLICATION TO A PROPOSED BRAZILIAN SATELLITE

Nellore Srinivasan Venkataraman and Kondapalli Rama Rao Dec. 1981 13 p refs Presented at the Intern. Symp. on Workshop on the Motion of Planets and Satellites, Sao Paulo, Brazil, Dec. 1981

(INPE-2287-PRE/063) Avail: NTIS HC A02/MF A01

A method to estimate the orbital lifetime of near Earth satellites using the small perturbation theory is presented. A quasidynamic atmospheric model is used by employing a different exospheric temperature every three months. The drag coefficient is calculated using kinetic theory. The results are validated by applying to several known satellites and comparison with the actual lifetime is very good. The method is then applied to a proposed Brazilian Satellite. Author

THE EFFECTS OF ELECTRON AND GAMMA RADIATION ON EPOXY-BASED MATERIALS

R E Fornes, J D Memory, R D Gilbert, and E R Long, Jr *In its* Large Space Systems Technol., 1981 Mar 1982 p 27-36 Prepared in cooperation with North Carolina State Univ., Raleigh (For primary document see N82-18275 09-15)
Avail NTIS HC A19/MF A01 CSCL 22B

Specimens of graphite/epoxy composites and epoxy resins were exposed to electron and gamma radiation, followed by mechanical property and fundamental measurements. Measurement techniques included: scanning electron microscopy, X-ray diffraction analysis, and electron spin resonance spectroscopic analysis. Results indicate little or no change in flexural properties of miniature specimens of a graphite/epoxy composite and no change in failure mode at the fiber-resin interface and in the crystallinity of the fiber and the resin. Some doubt in the observation of stable flexural properties is cast by electron paramagnetic resonance spectra of a relatively large number of radiation-generated radicals. These generally lead to a change in cross-linking and in chain-scissioning which should alter mechanical properties.

BASIC PHYSICAL AND CHEMICAL PROCESSES IN SPACE RADIATION EFFECTS ON POLYMERS

E Kamaratos, J W Wilson, C K Chang, and Y J Xu *In its* Large Space Systems Technol., 1981 Mar 1982 p 37-58 refs Prepared in cooperation with Christopher Newport College and Old Dominion Univ. (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

The effects of space ionizing radiation on polymers is investigated in terms of operative physical and chemical processes. A useful model of charged particle impact with a polymer was designed. Principle paths of molecular relaxation were identified and energy handling processes were considered. The focus of the study was on energy absorption and the immediately following events. Further study of the radiation degradation of polymers is suggested.

PULSED RADIOLYSIS OF MODEL AROMATIC POLYMERS AND EPOXY BASED MATRIX MATERIALS

Amitava Gupta, Jovan Moacanin, Renty Liang, and Dan Coulter *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 59-65 (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

Models of primary processes leading to deactivation of energy deposited by a pulse of high energy electrons were derived for epoxy matrix materials and poly[l-vinyl naphthalene]. The basic conclusion is that recombination of initially formed charged states is complete within 1 nanosecond, and subsequent degradation chemistry is controlled by the reactivity of these excited states. Excited states in both systems form complexes with ground state molecules. These excimers or exciplexes have their characteristics emissive and absorptive properties and may decay to form separated pairs of ground state molecules, cross over to the triplet manifold or emit fluorescence. ESR studies and chemical analyses subsequent to pulse radiolysis were performed in order to estimate bond cleavage probabilities and net reaction rates. The energy deactivation models which were proposed to interpret these data have led to the development of radiation stabilization criteria for these systems.

THE EFFECTS OF MICROCRACKING ON THE THERMAL EXPANSION OF GRAPHITE-EPOXY COMPOSITES

David E Bowles *In its* Large Space Systems Technol., 1981 Mar 1982 p 67-79 refs (For primary document see N82-18275 09-15)
Avail NTIS HC A19/MF A01 CSCL 22B

A study of the effects of thermal environment and microcracking in graphite epoxy composites was made. Research indicates that microcracking does affect the thermal expansion of composite laminates. The amount of reduction in thermal expansion was a function of the crack density. A maximum reduction of approximately 25% occurred in a quasi-isotropic specimen with a crack density of 2.05 mm 1 in the 90 deg plies. Laminate analysis with appropriate reductions in E sub 2 and Alpha sub 2 of the damaged plies appears to be capable of modeling the observed

THERMAL EXPANSION OF GRAPHITE-EPOXY BETWEEN 116 K AND 366 K

John S Short, Michael W Hyer, David E Bowles, and Stephen S Tompkins *In* is Large Space Systems Technol., 1981 Mar. 1982 p 81-92 ref Prepared in cooperation with Virginia Polytechnic Institute and State Univ. (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

A Priest laser interferometer was developed to measure the thermal strain of composite laminates. The salient features of this interferometer are that: (1) it operates between 116 K and 366 K; (2) it is easy to operate; (3) minimum specimen preparation is required; (4) coefficients of thermal expansion in the range of 0-5 micro epsilon/K can be measured; and (5) the resolution of thermal strain is on the order of micro epsilon. The thermal response of quasi-isotropic, T300/5208, grahite-epoxy composite material was studied with this interferometer. The study showed that: (1) for the material tested, thermal cycling effects are negligible; (2) variability of thermal response from specimen to specimen may become significant at cryogenic temperatures; and (3) the thermal response of 0.6 cm and 2.5 cm wide specimens are the same above room temperature.

FINITE ELEMENT THERMAL-STRUCTURAL MODELING OF ORBITING TRUSS STRUCTURES

Earl A. Thornton, Jack Mahaney, and Pramote Dechaumphai *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 93-108 refs (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

A description of an integrated finite element (FE) thermal-structural approach for accurate and efficient modeling of large space structures is presented. A geometric model with a common discretization for all analyses is employed. It uses improved thermal elements and the results from the thermal analysis directly in the structural analysis without any intervening data processing. The differences between the conventional FE approach as implemented in large programs and an integrated FE approach currently under development are described. Considerations for thermal modeling of truss members is discussed and three thermal truss finite elements are presented. The performance of these elements was evaluated for typical truss members neglecting joint effects. A simple truss with metallic joints and composite members was studied to evaluate the effectiveness of the approach for realistic truss designs. A study of the effects of aluminum joints on the thermal deformations of a simple, plane truss with composite members showed that joint effects may be significant. Further study is needed to assess the role of joint effects on the deformation of large trusses.

VIBRATION AND BUCKLING STUDIES OF PRETENSIONED STRUCTURES

c75

W. Keith Belvin *In its* Large Space Systems Technol., 1981 Mar. 1982 p 109-121 (For primary document see N82-18275 09-15)

Avail: NTIS HC A19/MF A01 CSCL 22B

Results of analyses and tests of a simple pretensional structure are presented. Linear finite element analysis correlated well with experimental small amplitude vibration data. The buckling and vibration behavior of a pretensional stayed column was studied in detail. The bifurcation buckling load was also predicted accurately. Postbuckling behavior of the column was unusual and results in a post buckling restoring force of only 1/64 the bifurcation buckling load. Interaction between lateral accelerations and compressive load creates isolated stay slackening at loads above 50 percent of the buckling load. Further research will be required to fully understand their impact on the use of pretensioned structures as large space structures. M.D.K.

VIBRATION DAMPING CHARACTERISTICS OF GRAPHITE/EPOXY COMPOSITES FOR LARGE SPACE STRUCTURES

R. F. Gibson *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 123-132 refs (For primary document see N82-18275 09-15)

Avail: NTIS HC A19/MF A01 CSCL 22B

Limited data on extensional and flexural damping of small specimens of graphite/epoxy and unreinforced epoxy resin were obtained. Flexural damping was measured using a forced vibration technique based on resonant flexural vibration of shaker excited double cantilever specimens. Extensional damping was measured by subjecting similar specimens to low frequency sinusoidal oscillation in a servohydraulic tensile testing machine while plotting load versus extensional strain. Damping was found to vary slowly and continuously over the frequency range 0.01 - 1000 Hz, and no drastic transitions were observed. Composite damping was found to be less than neat resin damping. Comparison of small specimen damping values with assembled column damping values seems to indicate that, for those materials, material damping is more important than joint damping. The data reported was limited not by the test apparatus, but by signal conditioning and data acquisition. It is believed that filtering of the strain gage signals and the use of digital storage with slow playback will make it possible to extend the frequency and amplitude ranges significantly. M.D.K.

THE POTENTIAL OF NONPERIODIC TRUSS STRUCTURES FOR SPACE APPLICATIONS

K. C. Park (Lockheed Palo Alto Research Lab.) and J. M. Winger *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 133-143 (For primary document see N82-18275 09-15)

Avail: NTIS HC A19/MF A01 CSCL 22B

In order to assess the dynamic characteristics of truss structures made of the nonperiodic lattices, a cantilever truss beam was analyzed for vibrations. In addition, three additional lattice configurations were also constructured along with two beams made of tetrahedrons. The relative frequency variations of the six cantilever truss beams for their first mode were examined. To make the comparison meaningful, the beam length, the number of lattice joints and the total weight were chosen to be identical within 2 percent differences. The frequencies of the four nonperiodic truss beams varied over 60 percent while those of the two beams of tetrahedron lattices only about 13 percent. Such wide frequency variations of the proposed nonperiodic truss beams indicate that the introduction of nonperiodic lattices could be effectively used to improve the controllability of steady state vibration as well as improved wave dispersion characteristics. T.M.

IAC CONTROL SYSTEM ANALYSIS DEVELOPMENT

Harold P. Frisch *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 159-167 refs (For primary document see N82-18275 09-15)

Avail: NTIS HC A19/MF A01 CSCL 22B

The MultiOptimal Differential Equation Language (MODEL) is described. It provides a means for generating numerical solutions to systems of differential equations using a digital computer. The notation of this language is similar to that usually used in describing physical systems by differential equations. Thus, the learning process is simplified, programming becomes easier, and debugging is more readily accomplished. Programs written in the MultiOptimal Differential Equation Language are machine translated into FORTRAN 4 code which is optimal in several respects. The interactive version of MODEL makes use of interactive system routines so that the user may observe the solution as it is being generated and interact with the program in a manner similar to that associated with analog simulation. The DISCOS-Control version of the MODEL simulation language is used to describe the control system for a plant which is modelled by the DISCOS program. DISCOS plant variables may be referenced in the control system description and all the sensor signals, coupling torques, momentum devices and external loads are automatically linked to the DISCOS plant model. T.M.

LARGE ADVANCED SPACE SYSTEMS (LASS) COMPUTER-AIDED DESIGN PROGRAM ADDITIONS

C. E. Farrell *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 169-177 (For primary document see N82-18275 09-15)

(Contract NAS1-1644)

Avail: NTIS HC A19/MF A01 CSCL 22B

The LSS preliminary and conceptual design requires extensive iteractive analysis because of the effects of structural, thermal, and control intercoupling. A computer aided design program that will permit integrating and interfacing of required large space system (LSS) analyses is discussed. The primary objective of this program is the implementation of modeling techniques and analysis algorithms that permit interactive design and tradeoff studies of LSS concepts. Eight software modules were added to the program. The existing rigid body controls module was modified to include solar pressure effects. The new model generator modules and appendage synthesizer module are integrated (interfaced) to permit interactive definition and generation of LSS concepts. The mass properties module permits interactive specification of discrete masses and their locations. The other modules permit interactive analysis of orbital transfer requirements, antenna primary beam n, and attitude control requirements. T.M.

MOBILE WORK STATION CONCEPT FOR ASSEMBLY OF LARGE SPACE STRUCTURES (ZERO GRAVITY SIMULATION TESTS)
Walter L. Heard, Jr., Harold G. Bush, Richard E. Wallsom, and J. Kermit Jensen *In its* Large Space Systems Technol., 1981 Mar. 1982 p 193-204 refs Prepared in cooperation with Kentron International, Inc. (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

The concept presented is intended to enhance astronaut assembly of truss structure that is either too large or complex to fold for efficient Shuttle delivery to orbit. The potential of augmented astronaut assembly is illustrated by applying the result of the tests to a barebones assembly of a truss structure. If this structure were assembled from the same nestable struts that were used in the Mobile Work Station assembly tests, the spacecraft would be 55 meters in diameter and consist of about 500 struts. The struts could be packaged in less than 1/2% of the Shuttle cargo bay volume and would take up approximately 3% of the mass lift capability. They could be assembled in approximately four hours. This assembly concept for erectable structures is not only feasible, but could be used to significant economic advantage by permitting the superior packaging feature of erectable structures to be exploited and thereby reduce expensive Shuttle delivery flights. ORBITER BASED CONSTRUCTION EQUIPMENT
C. J. Goodwin *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 205-217 (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

Many orbiter based activities need equipment to hold a payload steady while it is being worked on. This work may be construction, updating, repair, services, check out, or refuerling operations in preparation for return to Earth. The Handling and Positioning Aid (HPA) is intended for use as general purpose equipment. The HPA provides a wide choice of work station positions, both immediately above the orbiter cargo bay and beyond. It can act in a primary docking role and, if required, can assist actively in the berthing process. From an analysis of ten reference missions, it was determined that two types of HPA mobility are needed; a tilt table, which simply swings out of the cargo bay, pivoting about an athwartships y axis, and an articulated arm. Illustration of the aid are provided. T.M.

The Spatial, High-Accuracy, Position-Encoding Sensor is a controls sensor suitable for the determination of the static shape and vibrational motion of large space structures and similar systems and for the determination of position and velocity in rendezvous and docking. It uses a combination of electro-optical techniques to measure the three-dimensional coordinates distributed over the structure at reading rates high compared to the rates at which the coordinates are changing. The technical approach is that of measuring the distance to and the direction of points on the structure from a single sensor head. Many points can be measured simultaneously from a single head without significantly increasing the complexity of the system. L.F.M.

CONTROL TECHNOLOGY DEVELOPMENT
David B. Schaechter *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 297-311 refs (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

The main objectives of the control technology development task are given in the slide below. The first is to develop control design techniques based on flexible structural models, rather than simple rigid-body models. Since large space structures are distributed parameter systems, a new degree of freedom, that of sensor/actuator placement, may be exercised for improving control system performance. Another characteristic of large space structures is numerous oscillatory modes within the control bandwidth. Reduced-order controller design models must be developed which produce stable closed-loop systems when combined with the full-order system. Since the date of an actual large-space-structure flight is rapidly approaching, it is vitally important that theoretical developments are tested in actual hardware. Experimental verification is a vital counterpart of all current theoretical developments. L.F.M.

A STUDY OF AUTONOMOUS RENDEZVOUS AND DOCKING SYSTEMS

J. D. Michael *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 335-344 refs (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

An overview of activities in the automatic rendezvous and docking area is presented. A representative mission scenario is covered. A statement of the problem is made and the requirements for the extraction of relative attitude and position data are delineated. A systems block diagram is included and the integral functions which go to make up an autonomous docking system is described. A system was simulated, and the digital simulation is described along with some representative results of a system based a laser ranging device as the sensor. A television camera as the ranging sensor was also considered, one video based automatic docking scheme is discussed along with some representative results. S.L.

A DISTURBANCE ISOLATION CONTROLLER FOR THE SOLAR ELECTRIC PROPULSION SYSTEM FLIGHT EXPERIMENT

H. B. Waites *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 345-361 refs (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

A disturbance isolation controller (DIC) is developed for a simplified model of the solar electric propulsion system (SEPS) flight experiment which consists of a rigid Sperry gimbal torquer (AGS) mounted to a rigid orbiter and the SEPS solar array (rigid) end mounted to the AGS. The main purpose of the DIC is to reduce the effects of orbiter disturbances which are transmitted to the flight experiment. The DIC uses an observer, which does not require the direct measurement of the plant inputs, to obtain estimates of the plant states and the rate of the plant states. The state and rate of state information is used to design a controller which isolates disturbances from specified segments of the plant, and for the flight experiment, the isolated segment is the SEPS solar array. SYSTEMS IDENTIFICATION TECHNOLOGY DEVELOPMENT FOR LARGE SPACE SYSTEMS

E. S. Armstrong *In its* Large Space Systems Technol., 1981 Mar. 1982 p 371-374 refs (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

A methodology for synthesizing systems identification, both parameter and state, estimation and related control schemes for flexible aerospace structures is developed with emphasis on the Maypole hoop column antenna as a real world application. Modeling studies of the Maypole cable hoop membrane type antenna are conducted using a transfer matrix numerical analysis approach. This methodology was chosen as particularly well suited for handling a large number of antenna configurations of a generic type. A dedicated transfer matrix analysis, both by virtue of its specialization and the inherently easy compartmentalization of the formulation and numerical procedures, is significantly more efficient not only in computer time required but, more importantly, in the time needed to review and interpret the results. S.L.

INTEGRATED CONTROLS/STRUCTURES STUDY OF ADVANCED SPACE SYSTEMS

C. S. Greene and T. B. Cunningham *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 389-412 refs (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

A cost tradeoff is postulated for a stiff structure utilizing minimal controls (and control expense) to point and stabilize the vehicle. Extra costs for a stiff structure are caused by weight, packaging size, etc. Likewise, a more flexible vehicle should result in reduced structural costs but increased costs associated with additional control hardware and data processing required for vibration control of the structure. This tradeoff occurs as the ratio of the control bandwidth required for the mission to the lowest (significant) bending mode of the vehicle. The cost of controlling a spacecraft for a specific mission and the same basic configuration but varying the flexibility is established. S.L.

ACTIVE CONTROL OF SPACE STRUCTURES: PROOF OF CONCEPT EXPERIMENT

J. A. Breakwell *In* NASA. Langley Research Center Large Space Systems Technol., 1981 Mar. 1982 p 413-428 (For primary document see N82-18275 09-15)
Avail: NTIS HC A19/MF A01 CSCL 22B

Modern control theory easily works with multiple input/multiple output systems. Two types of systems which fall into this category are flexible systems, where many measurements and several actuators are necessary to provide control over bending behavior, and articulated systems which consist of several rigid bodies connected together by pivoting connections. In this latter case, multiple controls are implemented as torquers at the joints. S.L.

SOLAR POWER SATELLITES, SUMMARY

Aug. 1981 22 p
(OTA-E-145) Avail: NTIS HC A02/MF A01

The energy potential of the solar power satellite (SPS) was assessed. The preliminary nature of SPS technology was taken into account by comparing four alternative SPS systems across a broad range of issues: their technical characteristics long term energy supply potential, international and military implications, environmental impacts, and institutional effects. The SPS options were also compared to potentially competitive energy technologies in order to identify how choices among them might be made. In addition, a set of Federal research and funding options were developed to address the central questions and uncertainties identified in the report. S.L.

TONE RECEIVER FOR SATELLITE POSITION DETERMINATION [RECEPTOR DE TONS PARA LOCALIZACAO DE SATELLITES]
Celso Macedo deAndrade and Aydano B. Carleial Jul. 1981 19 p refs In PORTUGUESE; ENGLISH abstract Presented at the 33rd Ann. Meeting of SBPC, Salvador, Bahia, Brazil, 8-15 Jul. 1981
(INPE-2159-RPE/378) Avail: NTIS HC A02/MF A01

The receiver has the function of processing the ranging signal, composed of tones in 40, 160, 800, 4000, and 20000 Hz, according to the NASA standard. This signal originates on the ground and is retransmitted back by the satellite. The processing consists of separating the tones, which jointly modulate the carrier, and comparing their phases with the phases of the corresponding original tones, transmitted from the ground. Tone separation is accomplished by second-order PLLs, which operate as narrowband filters. From each phase comparison results a signal with pulses modulated in width by the phase difference between the two waves in question. The five measured values are forwarded by the receiver to another apparatus, which computes the distance from these data. T.M.

(Contract F-K-80123-80-004-21-001)
(FFA-TN-AU-1661-Pt-1) Avail: NTIS HC A08/MF A01

Improvements to a missile aerodynamics program which enable it to (a) calculate aerodynamic coefficients as input for a flight mechanics model, (b) check manufacturers' data or estimate performance from photographs, (c) reduce wind tunnel testing, and (d) aid optimization studies, are discussed. Slender body theory is used for longitudinal damping derivatives prediction. Program predictions were compared to known values. Greater accuracy is required in the estimation of drag due to excrescences on actual missile configurations, the influence of a burning motor, and nonlinear effects in the stall region. Prediction of pressure centers on wings and on bodies in presence of wings must be improved. Author (ESA)

(Contract NAS9-16445)
(NASA-CR-167510; D180-26864-1) Avail: NTIS HC A05/MF A01 CSCL 22B

The NASA orbiter spacecraft incorporates a complex array of systems, displays and controls. The incorporation of discrete dedicated controls into a multi-function display and control system (MFDCS) offers the potential for savings in weight, power, panel space and crew training time. The technology applicable to the development of a MFDCS for orbiter application is surveyed. Technology thought to be applicable presently or in the next five years is highlighted. Areas discussed include display media, data handling and processing, controls and operator interactions and the human factors considerations which are involved in a MFDCS design. Several examples of applicable MFDCS technology are described. T.M.

A DYNAMIC MEASURE OF CONTROLLABILITY AND OBSERVABILITY FOR THE PLACEMENT OF ACTUATORS AND SENSORS ON LARGE SPACE STRUCTURES
Wallace E. VanderVelde and Craig R. Carignan Jan. 1982 55 p refs
(Grant NAG1-126)
(NASA-CR-168520; SSL-2-82) Avail: NTIS HC A04/MF A01 CSCL 22B

The degree of controllability of a large space structure is found by a four step procedure: (1) finding the minimum control energy for driving the system from a given initial state to the origin in the prescribed time; (2) finding the region of initial state which can be driven to the origin with constrained control energy and time using optimal control strategy; (3) scaling the axes so that a unit displacement in every direction is equally important to control; and (4) finding the linear measurement of the weighted 'volume' of the ellipsoid in the equicontrol space. For observability, the error covariance must be reduced toward zero using measurements optimally, and the criterion must be standardized by the magnitude of tolerable errors. The results obtained using these methods are applied to the vibration modes of a free-free beam. A.R.H.

DESIGN PRACTICES FOR CONTROLLING SPACECRAFT

CHARGING INTERACTIONS
N. John Stevens 1982 21 p refs Presented at the 20th Aerospace Sci. Meeting, Orlando, Fla., 11-14 Jan. 1982; sponsored by AIAA
(NASA-TM-82781; E-1112) Avail: NTIS HC A02/MF A01 CSCL 22B

A design guidelines handbook prepared to provide criteria for assessing and minimizing spacecraft charging interactions is described. An evaluation philosophy of analyzing specific satellite designs in a substorm environment specification with NASCAP is proposed. Criteria for possible discharges are given and a technique for computing the discharge transients is outlined. The charging of a three axis stabilized satellite is examined to illustrate the philosophy. Possible discharge locations are found and transients computed. The effect of changing selected surface coatings is evaluated and found to substantially reduce charging levels. J.M.S.

This effort addresses three areas of active structure control/vibration control: (1) Stability ensuring designs in the presence of modal truncation/inaccurate structural models using a method based on the positivity of operators; (2) On-orbit parameter identification using the maximum likelihood method; and (3) Trade-offs between model reference adaptive control and fixed gain control with and without on-orbit parameter identification and system tuning, developed a stability ensuring design methodology which does not rely on modal truncation, has only low sensitivity to the exact knowledge of the structures model and, with some modifications, can be extended to non-linear systems. The method yields good performance, but is not necessarily optimal. The maximum likelihood method of parameter identification was studied. Parameter data collected on-orbit could be used to up-date the control model and improve performance. An alternative to explicit parameter identification and subsequent system tuning is direct adaptive control. Trade-offs between parameter identification and tuning versus adaptive controls were coordinated and the results are presented. Author (GRA)

PRIMARY PROPULSION/LARGE SPACE SYSTEM INTERACTION STUDY Final Report, Sep. 1979 - Dec. 1980
J. V. Coyner, R. H. Dergance, R. I. Robertson, and J. V. Wiggins Dec. 1981 358 p refs
(Contract NAS3-21955)
(NASA-CR-165277; MCR81-504) Avail: NTIS HC A16/MF A01 CSCL 21H

An interaction study was conducted between propulsion systems and large space structures to determine the effect of low thrust primary propulsion system characteristics on the mass, area, and orbit transfer characteristics of large space systems (LSS). The LSS which were considered would be deployed from the space shuttle orbiter bay in low Earth orbit, then transferred to geosynchronous equatorial orbit by their own propulsion systems. The types of structures studied were the expandable box truss, hoop and column, and wrap radial rib each with various surface mesh densities. The impact of the acceleration forces on system sizing was determined and the effects of single point, multipoint, and transient thrust applications were examined. Orbit transfer strategies were analyzed to determine the required velocity increment, burn time, trip time, and payload capability over a range of final acceleration levels. Variables considered were number of perigee burns, delivered specific impulse, and constant thrust and constant acceleration modes of propulsion. Propulsion stages were sized for four propellant combinations: oxygen/hydrogen, oxygen/methane, oxygen/kerosene, and nitrogen tetroxide/monomethylhydrazine, for pump fed and pressure fed engine systems. Two types of tankage configurations were evaluated, minimum length to maximize available payload volume and maximum performance to maximize available payload mass. S.L.

(AF Proj. 2419)
(AD-A108659; AFWAL-TR-80-4152) Avail: NTIS HC A04/MF A01 CSCL 21/3

Involute construction is an approach used in contemporary rocket nozzle technology for the fabrication of exit cones and other bodies of revolution and consists of laminating identical composites sheets of uniform thickness along curved surfaces, called involute surfaces. In this work, we shall derive the exact solution for these surfaces, which guarantees that the volume of the body being generated is precisely filled, with no gaps or overlaps. We also present the equations of the developed surface, or ply pattern, a formulation of the kinematics of the fabrication debulking process, and an experimental validation of the theoretical work.

This report is the final report of a three-phase project whose objective was to formulate a computer code to perform detailed preliminary designs of solid propellant rocket motors. All major components and performance of a motor are mathematically modeled using source dimensions and characteristics. A direct pattern search non-linear optimization scheme based on the Hooke and Jeeves algorithm is employed to establish motor characteristics that optimize any one of several performance parameters. Constraints imposed during the optimization process are basic performance requirements, design constraints and operating limits. Decision variables during optimization are propellant formulation, propellant burn rate, propellant grain dimensions, nozzle dimensions, and pressure vessel dimensions. Provisions are made for easily inserted user-defined models of several characteristics.

A user's manual for a computer code that performs detailed preliminary designs of solid propellant rocket motors is presented. All major components and performance of a motor are mathematically determined using source dimensions and characteristics. A direct pattern search nonlinear optimization scheme based on the Hooke and Jeeves algorithm is employed to establish motor characteristics that optimize any one of several performance parameters. Decision variables during optimization are propellant formulation, propellant burn rate, propellant grain dimensions, nozzle dimensions, and pressure vessel dimensions. Provisions are made for easily inserted user defined models of several characteristics. Constraints imposed during the optimization process are performance requirements, design constraints, and operating limits.

USER'S MANUAL FOR SOLID PROPULSION OPTIMIZATION CODE (SPOC). VOLUME 2: USER'S GUIDE Special Report, Feb. 1980 - Aug. 1981
G. P. Roys Aug. 1981 211 p 3 Vol.
(Contract F04611-80-C-0016; AF Proj. 3148)
(AD-A108225; U-81-4457B; AFRPL-TR-81-70-Vol-2) Avail: NTIS HC A10/MF A01 CSCL 21/8

The input and output dictionaries and their accompanying illustrations are presented along with other input instructions that are needed to execute the code. The user supplies a starting condition - an initial design - and all associated information needed to evaluate that design. These data are read in through a series of input namelists. The initial design is evaluated in the executive subroutine COMP and the results are printed. Then the print control is turned off and optimizer routine (PATSH) is called, which in turn makes multiple calls to COMP to evaluate the design with PATSH generated changes in values of user-specified parameters. Once an optimized design is reached, the print control is turned on and a final pass through COMP gives a complete description of the final design. The analyses performed in SPOC are: (1) grain geometric validation, (2) nozzle geometric validation, and (3) propellant thermochemistry.

The solid propulsion optimization code performs detailed preliminary designs of a large variety of solid propellant rocket motors. Dimensions of the propellant grain, nozzle, and pressure vessel are adjusted by the code, along with propellant formulation and burn rate, to produce a motor design that satisfies performance requirements and design constraints, and that has been optimized with respect to a user selected parameter. The subroutine descriptions and flow charts are presented. Cross-indices of common statements, subroutines and call statements are also included.

THEORETICAL CONSIDERATIONS OF BORON COMBUSTION IN DUCTED ROCKETS
Dirk Meinkoehn and Juergen Bergmann Oct. 1981 55 p refs
Transl. into ENGLISH from "Theoretische Ueberlegungen zur Borverbrennung im Kombinationsantrieben", Rept. DFVLR-FB-80-26 DFVLR Hardthausen am Kocker, West Germany, 1980
(ESA-TT-703; DFVLR-FB-80-26) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 15,10

The use of elemental boron as a fuel component for a ducted rocket motor design, consisting of a primary gas generator and an air breathing secondary chamber for the afterburning of the boron-rich exhaust from the primary chamber, is investigated. The primary chamber is conceived as a hybrid gas generator with nitric acid as the oxidizer and a solid fuel containing a high percentage of elemental boron. This design concept is characterized by the inherent advantage of a possible thrust modulation via the control of the oxidizer flow. The investigation shows that boron combustion ignition and satisfactory combustion efficiency require high gas temperatures. This can be achieved by primary combustion of a fraction of the total boron fuel.

The synthesis of monomethylhydrazine was successfully achieved by reacting solutions of hydroxylamine-O-sulfonic acid with methylamine in diglyme. The synthesis of 1,1-dimethylhydrazine was carried out in a similar manner with dimethylhydrazine. A mechanism for the formation of formaldehyde dimethylhydrazone by the reaction of dimethylamine and chloramine was proposed. A study was conducted on the oxidation of monomethylhydrazine and 1,1-dimethylhydrazine by oxygen.

DYNAMIC MECHANICAL PROPERTIES OF SOME WOOD-POLYMER COMPOSITE MATERIALS Ph.D. Thesis
Gregory Richard Moore 1981 109 p
Avail: Univ. Microfilms Order No. 8129191

A method was developed for impregnating small specimens of whole wood and some reconstituted wood products with undiluted bisphenol A-based epoxy resin containing a curing agent. This process was used to impregnate yellow-popler (Liriodendron tulipifera L.) sapwood and untempered dry-process hardboard. A detailed analysis of the dynamic mechanical properties of these impregnated materials was made for the temperature range from 0 through 100 C. The composition and mechanical properties of the impregnant were varied by changing the concentration of the metaphenylenediamine curing agent. This influenced the properties of the composite, particularly the internal friction. In all cases examined, the rule of mixtures resulted in high estimates for the internal friction and low estimates for the apparent dynamic modulus. A modified form of the rule of mixtures, which accounted for estimated strain energy sharing effects, produced better agreement between the observed and predicted internal friction results for the impregnated samples. Dissert. Abstr.

AN ASSESSMENT OF BUFFER STRIPS FOR IMPROVING DAMAGE TOLERANCE OF COMPOSITE LAMINATES AT ELEVATED TEMPERATURE
C. A. Bigelow Dec. 1981 14 p ref
(NASA-TM-83257) Avail: NTIS HC A02/MF A01 CSCL 11D

Buffer strips greatly improve the damage tolerance of graphite/epoxy laminates loaded in tension. Graphite/polyimide buffer strip panels were made and tested to determine their residual strength at ambient and elevated (177 C) temperature. Each panel was cut in the center to represent damage. Panels were radiographed and crack-opening displacements were recorded to indicate fracture, fracture arrest, and the extent of damage in the buffer strip after arrest. All panels had the same buffer strip spacing and width. The buffer strip material was 0 deg S-glass/PMR-15. The buffer strips were made by replacing narrow strips of the 0 deg graphite plies with strips of the 0 deg S-glass on either a one-for-one or a two-for-one basis. Half of the panels were heated to 177 + or - 3 C before and during the testing. Elevated temperature did not alter the fracture behavior of the buffer configuration. J.M.S.

MICROMECHANICAL PREDICTIONS OF CRACK PROPAGATION AND FRACTURE ENERGY IN A SINGLE FIBER BORON/ALUMINUM MODEL COMPOSITE
Donald F. Adams and Jayant M. Mahishi Feb. 1982 65 p refs
(Grant NsG-3217)
(NASA-CR-168550; UWME-DR-201-101-1) Avail: NTIS HC A04/MF A01 CSCL 11D

The axisymmetric finite element model and associated computer program developed for the analysis of crack propagation in a composite consisting of a single broken fiber in an annular sheath of matrix material was extended to include a constant displacement boundary condition during an increment of crack propagation. The constant displacement condition permits the growth of a stable crack, as opposed to the catastropic failure in an earlier version. The finite element model was refined to respond more accurately to the high stresses and steep stress gradients near the broken fiber end. The accuracy and effectiveness of the conventional constant strain axisymmetric element for crack problems was established by solving the classical problem of a penny-shaped crack in a thick cylindrical rod under axial tension. The stress intensity factors predicted by the present finite element model are compared with existing continuum results. S.L.

A STUDY OF THE EFFECTS OF LONG-TERM EXPOSURE TO FUELS AND FLUIDS ON THE BEHAVIOR OF ADVANCED COMPOSITE MATERIALS Final Report
E. Y. Tanimoto Aug. 1981 40 p ref
(Contract NAS1-12428)
(NASA-CR-165763; D6-41185-9) Avail: NTIS HC A03/MF A01 CSCL 11D

The periodic testing and evaluation of graphite/epoxy and Kevlar/epoxy material systems after subjecting test specimens to prolonged exposure to several laboratory-controlled environments deemed typical of normal aircraft operations is discussed. It is noted that specimen immersion in water or water-based fluids resulted in the greatest effect on the mechanical properties tested. Also, the environmental fluids showed a tendency to affect Kevlar/epoxy systems at an earlier exposure period than the graphite/epoxy systems. Results also indicate mechanical property strength retention generally being lower for the Kevlar/epoxy systems when compared to the corresponding graphite/epoxy systems in similar environments, after prolonged exposure. MITIGATION OF CONDUCTIVE FIBER RELEASE BY SELECTED COATINGS Final Report
Stanley E. Wentworth and Abram O. King Sep. 1981 14 p refs
(DA Proj. 1L1-62105-AH-84)
(AD-A108270; AMMRC-TR-81-47) Avail: NTIS HC A02/MF A01 CSCL 07/4

Several polymeric coatings have been evaluated, by means of a technique utilizing thermogravimetric analysis and scanning electron microscopy, as to their effectiveness in preventing the release of conductive fibers from a graphite/epoxy composite subjected to a thermaloxidative environment. The coatings examined included a conventional commercial paint, a conventional Mil Spec flame-retardant paint, an experimental poly (aryloxyphosphazene)-based flame-retardant paint, and an experimental high temperature-resistant polyphenylquinoxaline (PPQ). It was concluded that the PPQ offered considerable promise for mitigating fiber release although work on formulation development is required for optimum effect. It was also concluded that the poly(aryloxyphosphazene) coated directly onto the fibers prior to their incorporation into the composite was an equally promising approach provided that the resultant degradation in mechanical properties can be circumvented. Several different commercial graphite fibers were characterized as to surface chemistry by XPS analysis, radiotracer analysis, thermal desorption/mass spectrometry, and surface energetics via contact angle measurements. These fibers were then treated by selective oxidation and devolatilization. Various interphase resins were then electrodeposited on the fibers. Composites were made from three matrix resins using the electrodeposited fibers and tested before and after exposure to moisture aging. No improvement in shear strength due to the electrodeposited interphase resins was noted. Author (GRA)

A DIGITAL ALGORITHM FOR COMPOSITE LAMINATE ANALYSIS, FORTRAN Final Report, 3 Jul. 1980 - 1 Jun. 1981
Som R. Soni Wright-Patterson AFB, Ohio AFWAL Sep. 1981 86 p refs
(Contract F33615-79-C-5129)
(AD-A108201; AFWAL-TR-81-4073) Avail: NTIS HC A05/MF A01 CSCL 11/4

A FORTRAN computer code for the solution of composite materials problems is presented. The computer program can conduct the point stress analysis of general laminates and hybrid laminates. The effect of hygrothermal and mechanical loads on the strength of composite laminates can be studied. Analytical formulas based on the lamination theory were used. Input and output parameters are explained in detail. The algorithm is written in an easily understandable format. At the most, the program can take care of eight materials and twenty plys. For problems containing more materials and plys, the corresponding dimensions are to be increased in the main program and related subroutines. Required material properties can be used by giving a corresponding material property identification number in the layers data card. These quantities are given in SI units. If the results are desired in English units (i.e., Psi, etc.), a unit identification number not equal to 1(-2), has to be used. GRA

FAILURE OF FIBROUS COMPOSITES. PART 1: STRESS CONCENTRATION, CRACKS AND NOTCHES. PART 2: TOUGHNESS
Peter W. R. Beaumont 1981 21 p refs Submitted for publication
(PB82-113531; CUED/C-MATS/TR-78-1981;
ISSN-0309-6505) Avail: NTIS HC A02/MF A01 CSCL 11D

A fibrous composite containing a notch or hole in monotonic loading exhibits premature cracking at stresses significantly lower than the ultimate strength; strength; interfacial shear cracking, delamination or splitting, fiber fracture, matrix cracking and so forth. The formation of a damaged region is due to the concentration of localized tensile and shear stresses close to the notch front. The precise mode of failure depends upon the orientation of fibers and stacking geometry of the laminate, it is also sensitive to the properties of the matrix and fiber matrix interface; and to the stress state and environment. The micromechanisms of crack extension in various classes of fibrous composites and includes models to account for the origins of toughness are surveyed. Author (GRA)

MICROMECHANISMS OF FRACTURE AND HYPOTHERMAL AGING OF FIBROUS COMPOSITES Final Report, 1 Aug. 1978 - 31 Dec. 1980
Peter W. R. Beaumont 28 Feb. 1981 73 p refs
(Grant AF-AFOSR-3644-78; AF Proj. 2307)
(PB82-121369; CUED/C-MAT/TR-76-181) Avail: NTIS HC A04/MF A01 CSCL 11D

The micromechanisms of crack extension of carbon fibers, glass fibers, and hybrid composites containing glass fibers, and carbon fibers in epoxy and polyester resins were studied. A new collection of failure data based on observations of fibers debonding snapping and pulling out was summarized in cumulative probability diagrams and analyzed using Weibull distribution parameters. This data, together with models of failure processes and information of work of fracture, is used to construct fracture mechanism diagrams. These diagrams, together with the Weibull parameters may help in distinguishing between mechanisms of fracture give guidance in selecting a material system and in isolating aging and environmental effects. SOOT RADIATION FROM DIFFUSION FLAMES Ph.D. Thesis
Siu-Chun Lee 1981 111 p
Avail: Univ. Microfilms Order No. 8200178

A dispersion model for the optical constants of soot in hydrocarbon flames was established on the basis of a rigorous consideration of the electronic band structure and the dispersion constants. The dispersion constants of hydrocarbon soot were determined from this model in conjunction with in-situ flame transmission data in the visible and infrared ranges, thus truly reflecting that of soot in flames. It is shown that the soot optical properties are rather insensitive to temperature changes at elevated temperatures. However, the room temperature optical properties, representative of soot in smoke, exhibit appreciable deviation from the high temperature values. Soot particles in flames are usually polydisperse and their sizes and volume fractions may be determined from flame transmission data in the visible range by assuming a size distribution. The effect of soot shape on soot radiation from flames and smoke was examined. It is realized that soot particles always conglomerate into different shapes, while the limiting shapes are spheres and long chains modeled as infinite cylinders. Dissert. Abstr.

PHYSICOCHEMICAL PROPERTIES OF DIESEL PARTICULATE MATTER Ph.D. Thesis
Mark McCauley Ross 1981 129 p
Avail: Univ. Microfilms Order No. 8129208

The sorption of selected compounds onto Diesel particulate matter generated by two different engines was studied using two methodologies. A dynamic technique, gas-solid chromatography, was employed to measure heats of adsorption at low coverage. Effects of particle pretreatments and varying adsorbate coverages on the apparent heats of sorption were also investigated. A static technique of measuring adsorption isotherms by a volumetric methodology was used to determine B.E.T. surface areas, pore size distributions, and heats of adsorption as a function of surface coverage. Electron microscopy was used to measure mean particle diameters and external surface areas. The electron paramagnetic resonance (EPR) signal of the particles was monitored. EPR spectrometry was shown to be a convenient method of distinguishing between particulate samples from different engines and operating conditions and of following certain adsorbate/adsorbent interactions. Dissert. Abstr.

COMPETING REACTION CHANNELS IN IR LASER INDUCED UNIMOLECULAR REACTIONS Ph.D. Thesis
Michael Robert Berman 1981 246 p
Avail: Univ. Microfilms Order No. 8200019

The competing reaction channels in the unimolecular decomposition of two molecules, formaldehyde and tetralin were studied. A TEA CO2 laser was used as the excitation source in all experiments. The dissociation of D2CO was studied by infrared multiphoton dissociation (MPD) and the small-molecule nature of formaldehyde with regard to MPD was explored. The effect of collisions in MPD were probed by the pressure dependence of the MPD yield and IR fluorescence from multiphoton excited D2CO. The wavelength and power dependence of MPD were also studied. The unimolecular decomposition of tetralin was studied by MPD and SiF4 sensitized pyrolysis. Dissert. Abstr.

N82-18337 California Univ., Berkeley.

MULTIPHOTON DISSOCIATION AND THERMAL UNIMOLECULAR REACTIONS INDUCED BY INFRARED LASERS Ph.D. Thesis

Hai-Lung Dai 1981 233 p

Avail: Univ. Microfilms Order No. 8200071

Multiphoton dissociation (MPD) of ethyl chloride was studied using a tunable 3.3 micron laser to excite CH stretches. The absorbed energy increases almost linearly with fluence, while for 10 micron excitation there is substantial saturation. Much higher dissociation yields were observed for 3.3 micron excitation than for 10 micron excitation, reflecting bottlenecking in the discrete region of 10 micron excitation. Resonances in MPD yields vs frequency in the 3.3 micron region match the position and shape of peaks in the fundamental, as narrow as 0.4/cm and first and second overtone absorption spectra. Transitions through the discrete levels are all at or nearly resonant. Anharmonicity is compensated by the presence of five CH stretch modes. Overtone spectra show that line broadening already occurs at the v sub CH = 2 level and that v sub CH = 3 is clearly in the quasicontinuum. The resonant nature of the excitation allows the rate equations description for transitions in the quasicontinuum and continuum to be extended to the discrete levels.

Dissert. Abstr.

SELECTIVE JET PLATING Ph.D. Thesis

Tan-Jen Chen 1981 204 p

Avail: Univ. Microfilms Order No. 8127565

The use of an unsubmerged impinging jet system for selective plating is proposed. A theoretical analysis, which accounted for the charge transfer, mass transfer, and ohmic resistance effects, was developed to predict the current distributions along the cathode. Three electrochemical systems were employed in an experimental jet plating cell to demonstrate the validity of the model. The current distributions were measured with controlled variation of jet Reynolds number, nozzle-to-cathode distance, solution specific conductivity, and reactant concentration. Upon demonstrated to be valid, the theoretical model was used to predict the cell performance under a wide range of parameter values. Dissert. Abstr.

N82-18339 Princeton Univ., N. J.

THE THEORY AND APPLICATION OF TEMPERATURE PROGRAMMED DESORPTION IN THE STUDY OF UNSUPPORTED IRON AND IRON-COPPER FISCHER-TROPSCH SYNTHESIS CATALYSTS Ph.D. Thesis

Effiong Etukudo Ibok 1981 254 p

Avail: Univ. Microfilms Order No. 8126072

The shape index method is proposed for the analysis of temperature programmed desorption spectra. A criterion for estimating diffusional influences in TPD from porous systems is also proposed. Unsupported iron and iron-copper catalysts were studied by the adsorption and temperature programmed desorption of CO and CO2. And the effect of potassium and carbon additives on the adsorption and TPD of these gases was investigated. The reported spectra are net thermal conductivity responses. Based on an X-ray/SEM study, a model is proposed according to which the surface layers become depleted of copper during pretreatment. The relevance of all these findings to the Fischer-Tropsch synthesis is discussed. Dissert. Abstr.

N82-18340 Minnesota Univ., Minneapolis.

EXPERIMENTAL AND THEORETICAL STUDIES ON GAS CYCLONE SEPARATORS OPERATING AT HIGH EFFICIENCY Ph.D. Thesis

Thinh Van Tran 1981 161 p

Avail: Univ. Microfilms Order No. 8126034

It was shown that wall friction has negligible effect on particle motion, but dust particles on the wall move much more slowly than the surrounding gas, due to crowding. It was found that re-entrainment of particles in the region near the cone apex of a cyclone is a significant factor affecting collection efficiency of low and moderate efficiency cyclones. A theory on the secondary flow along the cone wall was developed. Short circuit flow on the top of a cyclone was also studied. The effect of this flow on efficiency was also studied. The secondary flow velocity was found to be dependent on inlet geometry and is of order of 15% that of the main flow. A simplified theory was developed to give the flow field in gas cyclones. It was shown that the particle volume fraction inside the dust spiral on a cyclone wall is of the same order as the emulsion phase in fluidized systems. Dissert. Abstr.

N82-18341 Louisiana State Univ. and A&M Coll., Baton Rouge.

FREQUENCY RESPONSE ANALYSIS OF DISTILLATION COLUMN INTERACTION Ph.D. Thesis

Chien Wang 1981 338 p

Avail: Univ. Microfilms Order No. 8126983

A dynamic pressure model of multicomponent distillation is developed in the frequency domain. The model consists of a set of linearized overall and component balances, enthalpy balance, pressure relationship, hydraulic equation and equilibrium relationships for each tray, the condenser and the reboiler of a general column. A numerical method consisting of total scaled pivoting Gaussian elimination with the method of residues is worked out for solving the model in the frequency domain to obtain all of the desired transfer functions. As a result, this analysis can be useful in defining the control problem and predicting interaction difficulties. The computer program developed can be used to study the effect of different model simplifying assumptions. The models studied were pressure model, enthalpy model and quimolar overflow model. A steady state program and a mechanical design program were also developed.

Dissert. Abstr.

IDENTIFYING AND DETERMINING HALOCARBONS IN WATER USING HEADSPACE GAS CHROMATOGRAPHY

Daniel C. Leggett Oct. 1981 17 p refs

(Proj. CWIS-31281)

(AD-A108345; CRREL-SR-81-26) Avail: NTIS HC A02/MF A01 CSCL 07/4

Since the discovery that chloroform and other haloforms are produced during water chlorination, methods have been needed for their routine analysis. This report describes the application of the multiple equilibration headspace technique for the determination of halocarbons in water. This method has certain advantages over solvent extraction and direct injection techniques, including greater sensitivity because of the favorable gas/liquid distribution ratios. It is simpler and faster than purge and trap and resin sorption methods and gives more information about compound indentity than single headspace analysis because gas/liquid distribution ratios are determined experimentally. The method is absolute, unlike solvent extraction, resin sorption, purge and trap, and conventional headspace analysis, which require standard additions to correct for incomplete recovery. The use of the technique to analyze chlorinated water samples for haloforms revealed a potential problem in their analysis. Haloforms continued to form for 24 hours, even after destruction of chlorine residuals with thiosulfate. Maximum haloform concentrations were observed in undechlorinated samples only after a 48 hour aging period. GRA

THE USE OF ELEMENT-SPECIFIC DETECTORS COUPLED WITH HIGH-PERFORMANCE LIQUID CHROMATOGRAPHS Interim Technical Report

K. L. Jewett and F. E. Brinckman 4 Nov. 1981 47 p refs

Submitted for publication

(Contract N00014-81-F-0013; NR Proj. 083-471)

(AD-A108539) Avail: NTIS HC A03/MF A01 CSCL 07/4

Element-specific detectors (ESDs) provide an excellent means of determining the molecular character and elemental composition of complex column effluents when used in tandem with HPLC systems. General purpose flame and electrothermal AA units along with inductively coupled and direct current plasma detectors are discussed in terms of the inherent advantages, difficulties and detection limits associated with using such systems. Other, more limited ESDs, such as flame photometric detectors are also compared. The HPLC-ESD interface remains the largest hurdle to increased utilization of this new analytical probe and attempts to solve or minimize this problem are reviewed. Recent applications involving HPLC-ESD systems illustrate the important role that these detectors can and will play in solving a wide variety of specification problems with biological, environmental, and energy-related matrices. Over 100 literature citations are provided. Author (GRA)

WEAK AND STRONG IGNITION. 1: NUMERICAL SIMULATIONS OF SHOCK TUBE EXPERIMENTS

E. S. Oran, T. R. Young, J. P. Boris, and A. Cohen (Ballistic Research Labs.) 7 Dec. 1981 37 p refs
(RR0130144; ZF43451001)
(AD-A108363; NRL-MR-4664) Avail: NTIS HC A03/MF A01 CSCL 21/2

Detailed one-dimensional calculations were performed to simulate weak and strong ignition in reflected shock tube experiments in hydrogen-oxygen-argon mixtures. It is found that the experiment and simulations agree well in the strong ignition case studied. In the weak ignition case, the simulations show the same qualitative behavior as the experiment. Here ignition starts at a distance away from the reflecting wall at a time much earlier than the calculated chemical induction time. This latter effect is shown to arise because of the sensitivity of the chemical induction time to fluctuations in the calculation In the calculations these fluctuations arise from small numerical inaccuracies. In experiments, they can arise from a number of sources including nonuniformities in the incident shock wave leading to nonuniform reflection, thermal conduction to the walls, and interactions with boundary layers. SOME COMPARISONS BETWEEN THE ENERGETICS OF ELECTROCHEMICAL AND HOMOGENEOUS ELECTRON-TRANSFER REACTIONS

Michael J. Weaver and Joseph T. Hupp 23 Nov. 1981 35 p refs Submitted for publication
(Contract N00014-79-C-0670)
(AD-A108195; TR-6) Avail: NTIS HC A03/MF A01 CSCL 07/4

Some conceptual relationships between the kinetics of corresponding electrochemical and homogeneous redox processes are discussed and applied to experimental data for suitable outer-sphere reactions in order to illustrate the utility of electrochemical kinetics for gaining some fundamental insights into the energetics of electron-transfer processes. It is pointed out that electrochemical kinetics and thermodynamics measurements as a function of temperature and electrode potential yield direct information on the shapes of the potential-energy surfaces and free energy barriers for individual redox couples. Comparisons between kinetics parameters for corresponding optical electrochemical and homogeneous exchange reactions show reasonable agreement with the predictions of the conventional 'weak overlap' model for several aquo redox couples, but exhibit substantial disagreement for couples containing amine and related ligands. These latter discrepancies may arise from the closer approach of the amine reactants to the electrode surface compared with the strongly solvated aquo complexes. A comparison is also made between the effects of varying the thermodynamic driving force upon the kinetics of related electrochemical and homogeneous reactions. It is shown that the apparent discrepancies seen between the predictions of the harmonic oscillator model and experimental data for some highly exoergic homogeneous reactions may be related to the anomalously small dependence of the rate constant upon overpotential observed for the electrooxidation of aquo complexes. This behavior seems most likely to be due to a marked asymmetry of the reactant and product free energy barriers for these half reactions. GRA

ENERGY CONTRIBUTIONS ASSOCIATED WITH COMBUSTION INSTABILITY Annual Progress Report, 1 Oct. 1980 - 30 Sep. 1981

H. B. Mathes 30 Sep. 1981 9 p ref
(AD-A108137) Avail: NTIS HC A02/MF A01 CSCL 21/2

The investigation of new and novel laboratory test techniques for determining the acoustic energy contributions of burning propellants will be pursued. Emphasis will be on methods that provide a more direct measurement than presently employed. Initial effort will be focused on methods for directly determining the response of solid propellant combustion to incident acoustic pressure waves. If successful, the method, or methods for pressure-coupled measurement will be modified to provide direct velocity-coupled response measurements. These methods are expected to lower the cost of characterizing the acoustic combustion response of solid propellant formulations of interest to the Navy and to provide improved accuracy of measurement. FUEL-RICH PLUME COMBUSTION Annual Progress Report, 1 Oct. 1980 - 30 Sep. 1981

K. C. Schadow, M. J. Lee, and K. C. Wilson 30 Sep. 1981 7 p refs
(AD-A108136) Avail: NTIS HC A02/MF A01 CSCL 21/2

Experiments are being performed using an axisymmetric gas generator ramjet. Axial and radial profiles of pressure, velocity, turbulence intensity, temperature, and species concentration are being determined using non-interference optical diagnostic techniques (laser Doppler velocimeter (LDV)) and intrusive probes. The experimental data are being compared with analytical models developed by Science Application, Inc. (SAI) under an Air Force Office of Scientific Research (AFOSR) contract. An axisymmetric, 5-inch diameter laboratory ramjet combustor was built and checked out. Experiments were initiated using (1) an LDV and a hot-wire anemometer for velocity and turbulence intensity measurements, (2) coated thermocouples for temperature measurement, and (3) a gas chromatograph for analysis of gas samples. During this period, emphasis has been placed on the construction, evaluation, and operation of a two-color laser anemometry (LA) system. Detailed velocity and turbulence intensity measurements have also been acquired in a water analog of the opposed jet configuration, and are scheduled for the centerbody configuration. Application of the numerical code to this case was initiated during the present reporting period for both the opposed jet and centerbody configurations, and the results are being checked with the experimental data as they become available. High-speed photography has been employed in both the combustor and hydrodynamic facilities to study the swirl and non-swirl performance of the centerbody configuration, and to optimize the design. Techniques have been developed (dyes in the hydrodynamic system and smoke in the combustor) to visually record the penetration and dynamics of the fuel jet. The NO probe experiments have addressed the effect of potentially resistant materials, and a refined experiment for the introduction of water and low concentrations of hydrocarbons typical of turbine emission has been completed. Data provide guidelines for the materials and temperature limits to employ in the measurement of NO(x). GRA

The objectives of this project are to: identify classifications of industrial sites producing sufficient industrial wastes to satisfy ongoing energy requirements for a refuse boiler and develop the technology necessary for acceptance by industry of systems fired by solid refuse-derived fuels in suspension-type burners. Fifteen industrial sites were identified. A full-scale combustion test facility was designed, built and installed at the Peabody Gordon-Piatt Plant in Winfield, Kansas. Ten ton samples of waste from 5 sites were brought to the test facility, prepared as fuels, and burned. Results of these combustion tests are presented. DOE

THREE-STAGE MASS SPECTROMETER FOR ISOTOPIC ANALYSIS OF RADIONUCLIDES IN ENVIRONMENTAL SAMPLES
J. E. Halverson Sep. 1981 14 p refs
(Contract DE-AC09-76SR-00001)
(DE82-001739; DP-1611) Avail: NTIS HC A02/MF A01

A three-stage mass spectrometer was constructed for isotopic analysis of several radioactive as well as stable elements at environmental levels. The spectrometer is interfaced to a digital computer, which controls the operation of the spectrometer, accumulates data, reduces data, and prints a final result. The spectrometer has demonstrated the capability of measuring the isotopic composition of plutonium samples as small as 0.005 picogram and has an abundance sensitivity greater than 10 to the 8th power. MODE SELECTIVE VIBRATIONAL ENERGY TRANSFER IN METHYLFLUORIDE Ph.D. Thesis - Georg-August Univ. [MODENSELEKTIVE
GUNG IN METHYLFLUORID]
Roland Stender May 1981 100 p refs In GERMAN
(MPIS-6/1981; ISSN-0436-1199) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 18,90

The influence of reaction speed on vibration energy transfer in molecules and overcoming energy barriers and their contribution to the reactions was studied. In slow relaxation processes the unequal weight distribution caused by lasers remains longer, so that most of the excited molecules cause a reaction which gives high production output and compared to thermal drop obtains a higher reaction speed. Characteristics of CH3F molecules, determination of excitation degree, experimental build up, and evaluation of fluoride measurements for CH3F without inert gas are discussed. Transl. by E.A.K.

Avail: NTIS HC A04/MF A01 CSCL 07D

A feasibility study was conducted on a new treatment technology for the destruction of pollutant compounds in wastewater. The process uses solar energy to drive an oxidant which is photocatalyzed at the surface of a semiconductor powder. The process was investigated particularly for water clean-up prior to industrial resuse, because of its non-energy-intensive nature. Five compounds (chloroform, dimethylamine, methanol, phenol, and ammonia) were used as model substrates, and removal at several pH values, using three different semiconductor (TiO2 ZnO, and Fe2O3) was investigated the laboratory, using a xenon lamp to simulate solar radiation. While Fe2O3 was found to be ineffective, both ZnO and TiO2 catalyzed the removal of all compounds.

DEVELOPMENT OF NOVEL POROUS SUBSTRATES FOR ULTRAFILTRATION, DESALINATION AND WATER RECLAMATION, PART 2 Final Report
Israel Cabasso 5 May 1981 69 p refs
(Contract DI-14-34-0001-9517)
(PB82-103920; W81-05352; OWRT-C-90264-D(9517)(1))
Avail: NTIS HC A04/MF A01 CSCL 07D

Porous, synthetic polymer substrates were developed as support components for composite desalination membranes. The selected material was methyl-brominated poly(bromophenylene oxide), or M-PPO, a hydrophobic polymer readily formulated and cast into large, flat-sheet membranes. Morphological characterization of M-PPO substrates by scanning electron microscope revealed the spongelike matrix structure. Dried substrates could be rewetted by using a wetting agent. Preparation of composite membranes involved deposition of a dense, ultrathin, permselective layer on the porous substrate. Two successful approaches were in the in situ polycondensation of two reactive prepolymers to the substrate surface, and the direct application of a dilute polymer solution.

AN EXPERIMENTAL DETERMINATION OF THE EFFECT OF CYCLIC STRESS ON VOID GROWTH IN ULTRA-HIGH-PURITY ALUMINUM DURING SIMULTANEOUS 800 MeV PROTON IRRADIATION Ph.D. Thesis
Walter Frank Sommer 1981 91 p
Avail: Univ. Microfilms Order No. 8127695

The theory that edge dislocations, set into oscillatory motion by an applied cyclic stress, would 'sweep up' excess radiation produced vacancies that would otherwise produce void growth was tested. Post-irradiation examination by transmission electron microscopy gave results qualitatively consistent with the theory. The simulation potential of the 800 MeV proton for CTR 14 MeV neutron effects is favorable, especially since 800 MeV protons yield large amounts of transmutation product gases such as hydrogen and helium. The large experimental volume at LAMPF greatly facilitated use of large, complicated hardware, relative to what can be considered for the core of a fission reactor. In addition, the flux of protons is contained in a directable beam which can be controlled to irradiate only the sample material.

THE SURFACE PROPERTIES AND FLOTATION OF RARE EARTH MINERALS Ph.D. Thesis
Pradip 1981 222 p
Avail: Univ. Microfilms Order No. 8200241

The related flotation chemistry of bastnaesite are minerals is examined. The Hallimond tube and Denver cell flotation tests together with the adsorption and electrokinetic studies are described. The synthesis and the surface-chemical characterization of the mineral bastnaesite is also studied. Electrokinetic investigations of bastnaesite, barite, and calcite in the presence of added flotation reagents revealed that under flotation conditions in the plant, calcite is positively charged, bastnaesite negatively charged whereas barite surface is being converted into barium carbonate. The addition of soda ash and lignin sulfonate depressant is, though, crucial in controlling flotation, the selective adsorption of chemisorbing fatty acids (tall oil) at high temperature is the key to successful beneficiation of this ore. The preliminary studies and laboratory scale flotation tests on the bastnaesite ore indicate that alkyl hydroxamates are very promising collectors for the beneficiation of ores such as those that occur at Mountain Pass. STUDIES ON PLASTIC INSTABILITY, NOTCH DEFORMATION AND HYDROGEN EFFECTS IN SPHEROIDIZED STEEL Ph.D. Thesis
Oliver Amanze Onyewuenyi 1981 293 p
Avail: Univ. Microfilms Order No. 8129071

Detailed studies on the mechanics of deformation and crack initiation at a U-notch in spheroidized AISI 1090 steel were conducted both with and without cathodically charged hydrogen. For large scale plasticity at a U-notch root, the principal plastic strain distribution does not follow a hyperbolic law, but may be described in the form epsilon sub 2 = P sub 1 exp (P sub 2 x/rho) where P sub 1 and P sub 2 are functions of plastic bend angle. The region of maximum strain gradient may be approximated by epsilon sub 2 = 0.08(1 + x^*/rho) where x^*/rho represents the process zone size for each plastic bend angle. Analysis of notch surface deformation patterns shows that surface instabilities form at a critical strain that is in fair agreement with predictions based on bifurcation analysis. Plastic instability initiates first at the notch surface in the form of instability bands independent of the presence of voids. Surface microcracks initiate within the instability bands. Crack initiation in the notch root process zone is characterized by the opening and extension of surface microcracks along characteristic slip lines accentuated by the extent of localized void profusion beneath the notch root. Dissert. Abstr.

KINETICS OF CRACK INITIATION AND PROPAGATION IN METAL-INDUCED EMBRITTLEMENT OF 4140 STEEL BY INDIUM Ph.D. Thesis
Henry Hang-Ling An 1981 122 p
Avail: Univ. Microfilms Order No. 8200480

Metal induced embrittlement (MIE) of 4140 steel by indium was studied using delayed failure tensile tests. The temperature and stress dependence of the kinetics of crack initiation and crack propagation in both liquid metal induced and solid metal induced cracking were examined in the same system for the first time in MIE using electrical potential drop measurements along the indium covered portion of the sample gage length to record the start and progress of cracking, and also through fractographic observations. Crack propagation in SMIE (solid metal induced embrittlement) was found to have rates and an activation energy indicating that the process is rate controlled by the surface self diffusion of indium on the crack surface. In contrast, crack propagation in LMIE (liquid metal induced embrittlement) is believed to be a process involving transport of the indium by bulk liquid flow. Crack initiation was thermally activated, and in both LMIE and SMIE the apparent activation energy was the same within experimental error. Dissert. Abstr.

EVALUATION OF PRESENT THERMAL BARRIER COATINGS FOR POTENTIAL SERVICE IN ELECTRIC UTILITY GAS TURBINES Final Report
R. J. Bratton, S. K. Lau, and S. Y. Lee Jul. 1982 161 p refs
Sponsored in part by Electric Power Research Inst.
(Contract NAS3-21377)
(NASA-CR-165545; Rept-81-9D6-NASAC-R3) Avail: NTIS HC A08/MF A01 CSCL 11F

The resistance of present-day thermal barrier coatings to combustion gases found in electric utility turbines was assessed. The plasma sprayed coatings, both duplex and graded types, were primarily zirconia-based, although a calcium silicate was also evaluated. Both atmospheric burner rig tests and high pressure tests (135 psig) showed that several present-day thermal barrier coatings have a high potential for service in gas turbines burning the relatively clean GT No. 2 fuel. However, coating improvements are needed for use in turbines burning lower grade fuel such as residual oil. The duplex ZrO2.8Y2O3/NiCrA1Y coating was ranked highest and selected for near-term field testing, with Ca2SiO4/NiCrA1Y ranked second. Graded coatings show potential for corrosive turbine operating conditions and warrant further development. The coating degradation mechanisms for each coating system subjected to the various environmental conditions are also described. B.W.

AN INVESTIGATION OF THE KINETICS FOR HYDROGEN CHEMISORPTION ON IRON METAL SURFACES Final Report, Apr. 1977 - Mar. 1980
Mickey R. Shanabarger Mar. 1980 33 p refs
(Grant NsG-2222)
(NASA-CR-168555) Avail: NTIS HC A03/MF A01 CSCL 11F

A quasi-isothermal approach was used to study the kinetics of hydrogen and hydrogen sulfide chemisorption onto iron film in an effort to understand the environmental degradation of steels. The coverage of chemisorbed hydrogen or chemisorbed sulfur was observed as a function of time for fixed conditions of substrate temperature. Auger electron spectroscopy was used to observe the sulfur and chemisorption-induced resistance change was employed to monitor hydrogen coverage. To compare the results obtained from studying the kinetics by two different techniques, the kinetics of oxygen chemisorption onto iron films was also studied. A reaction model utilized to interpret the H2/Fe2 chemisorption kinetics was applied to data from an earlier study on the desorption kinetics for H2 chemisorbed onto nickel films in the vicinity of the Curie temperature of the film. This analysis permitted a separation of the gross desorption process into individual components so that the influence of the magnetic phase transition on the rate constants could be determined. DEVELOPMENT OF MATERIALS AND PROCESS TECHNOLOGY FOR DUAL ALLOY DISKS Final Report
James M. Marder and Charles S. Kortovich Oct. 1981 188 p refs
(Contract NAS3-21351)
(NASA-CR-165224; TRW-ER-8001-F) Avail: NTIS HC A09/MF A01 CSCL 11F

Techniques for the preparation of dual alloy disks were developed and evaluated. Four material combinations were evaluated in the form of HIP consolidated and heat treated cylindrical and plate shapes in terms of elevated temperature tensile, stress rupture and low cycle fatigue properties. The process evaluation indicated that the pe-HIP AF-115 rim/loose powder Rene 95 hub combination offered the best overall range of mechanical properties for dual disk applications. The feasibility of this dual alloy concept for the production of more complex components was demonstrated by the scale up fabrication of a prototype CFM-56 disk made from this AF-115/Rene 95 combination. The hub alloy ultimate tensile strength was approximately 92 percent of the program goal of 1520 MPa (220 ksi) at 480 C (900 F) and the rim alloy stress rupture goal of 300 hours at 675 C (1250 F)/925 MPa (134 ksi) was exceeded by 200 hours. The low cycle fatigue properties were equivalent to those exhibited by HIP and heat treated alloys. There was an absence of rupture notch sensitivity in both alloys. The joint tensile properties were approximately 85 percent of the weaker of the two materials (Rene 95) and the stress rupture properties were equivalent to those of the weaker of the two materials (Rene 95). INVESTIGATION OF THE CNTD MECHANISM AND ITS EFFECT ON MICROSTRUCTURAL PROPERTIES OF SiC AND AlN Final Report
Deepak G. Bhat and Rodney M. Panos (Litton Industries, Woodland Hills, Calif.) Sep. 1981 188 p refs
(Contract F49620-79-C-0041; AF Proj. 2306)
(AD-A108581; AFOSR-81-0748TR) Avail: NTIS HC A09/MF A01 CSCL 11/6

The report describes the development of a CNTD process for silicon carbide. Following earlier work on resistance-heated substrate, attempts were made to develop a furnace process for CNTD SiC. High temperature flexure testing of SiC-coated graphite bend bars showed that the CNTD SiC was superior to other conventional SiC materials over the whole range of temperatures tested. Problems were encountered in attaining uniformity and repeatability of the material. All deposits tested showed a two-phase structure of Si and SiC. Highly variable compressive surface stresses were observed by XRD techniques. Attempts to develop a CNTD process for AlN were not successful. However, grain refinement and improvement in physical properties were achieved when AlN deposits were 'doped' with Si. The electrical and thermal properties of ÇVD AlN were comparable to other AlN materials. The IR transmittance characteristics were found to be inferior, possibly due to impurities in the deposit.

THE OXIDATION OF DILUTE IRON-SILICON ALLOYS ((Si) < OR = 1w/o) IN CARBON DIOXIDE
P. T. Moseley, G. Tappin, and J. C. Riviere Feb. 1981 14 p refs
(AD-A108328; AERE-R-10042; HL81/515) Avail: NTIS HC A03/MF A01 CSCL 11/6

The manner in which silicon, present as a minor alloy constituent, modifies the oxidation of iron in CO2/1% CO at 500 C has been studied. Increasing amounts of silicon progressively reduce the oxidation rate within the range (Si) = 0-1w/o and a variety of physical techniques have been used to examine oxidized specimens in pursuit of the origins of this beneficial influence. The scale forming on the alloys is composed of two layers in each of which iron is present as Fe3O4. The inner layer of scale contains silicon at approximately the same level (on a volume % basis) as the original metal while the outer scale appears to contain no silicon. The boundary between the two layers is also marked by an abrupt change in grain size and in texture of the Fe3O4. At the boundary between the alloy and the scale there develops a thin layer of nonferrous material in which the concentration of silicon is increased by more than an order of magnitude above that in the bulk alloy. This layer also includes a substantial accumulation of carbon which is thought to derive from carbon oxide gases which have penetrated to the base of the scale before taking part in the oxidation reaction.

THE EFFECT OF HYDROGEN ON THE SOLID SOLUTION STRENGTHENING AND SOFTENING OF NICKEL
J. Eastman, F. Heubaum, T. Matsumoto, and H. K. Birnbaum Nov. 1981 34 p refs
(Contract N00014-75-C-1012)
(AD-A108654) Avail: NTIS HC A03/MF A01 CSCL 11/6

The effects of hydrogen on the plastic deformation of nickel and nickel-carbon alloys were studied using plastic deformation techniques over a wide range of strain rates at about 300 K. The emphasis of the study was on the behavior at very low strains and low strain rates. Hydrogen was introduced as a solute element by quenching from a gaseous H2 atmosphere or by testing in a gaseous H2 atmosphere. The behavior of a number of different purities of nickel with hydrogen additions was examined. The most significant impurity element seemed to be C and this element was varied over a wide composition range by annealing in different atmospheres. Both solution softening and solution strengthening was observed depending on the amount of H in solution relative to the amount of C in solution. The nature of this solution softening is discussed. SHIPBOARD EXPOSURE TESTING Progress Report
E. J. Jankowsky and S. J. Ketcham 9 Sep. 1981 30 p refs
(AD-A108146; NADC-81075-60) Avail: NTIS HC A03/MF A01 CSCL 11/6

An effort is underway to correlate results of accelerated laboratory corrosion tests with actual shipboard exposure of aircraft materials. This report compares results of corrosion tests of a series of aluminum alloys with varying degrees of exfoliation resistance exposed on the flight decks of nuclear and conventional carriers. Results of exposure of laser hardening paints, water displacing paint, aluminum/aluminum oxide and graphite/epoxy composites are also described. Additionally, results of initial laboratory tests are given.

COMPARISON OF NOTCH-STRESS WITH STRAIN-CONTROLLED LOW CYCLE FATIGUE OF ALPHA-BETA TITANIUM ALLOYS Interim Report
J. M. Krafft and G. R. Yoder 4 Dec. 1981 13 p refs
(AD-A108548; NRL-MR-4697) Avail: NTIS HC A02/MF A01 CSCL 11/6

Prior studies of the present authors provided two different tests of low cycle fatigue endurance of the same set of titanium alloys. Strain controlled push-pull deformation of axial specimens covered crack initiation life of up to 1000 cycles. Notch stress controlled tensile load cycling extended the range to 1 million cycles. All of Ti-6Al-4V, the test materials varied in oxygen content and in effective grain size. The results could not be compared directly because of the disparity in the controlling variables: strain and stress excursions respectively. It is found that both kinds of data form a consistent set if the total stress excursion is used as a basis of comparison, except for cases of overly high notch loading. The earlier strain-controlled results were modeled by a cumulative cyclic creep strain criterion for crack initiation. This criterion appears to embrace also the notch stress results, thus providing a promising means for extrapolating fatigue data.

EFFECTS OF MICROSTRUCTURE AND FREQUENCY ON CORROSION-FATIGUE CRACK GROWTH IN Ti-8Al-1Mo-1V AND Ti-6Al-4V Final Report
G. R. Yoder, L. A. Cooley, and T. W. Crooker 8 Dec. 1981 18 p refs
(RR0220148)
(AD-A108361; NRL-MR-4678) Avail: NTIS HC A02/MF A01 CSCL 11/6

Fatigue crack growth studies were conducted on Ti-8Al-1Mo-1V and Ti-6Al-4V alloys in 3.5% NaCl aqueous solution. Each alloy was studied in two microstructural conditions and at two cyclic frequencies. The Ti-8Al-1Mo-1V was heat treated to produce a fine grained duplex anneal microstructure and a coarse grained Widmanstatten microstructure resulting from a beta anneal. The two microstructural conditions for the Ti-6Al-4V were an as received mill anneal and a beta anneal. The two cyclic frequencies were 01. and 5.0 Hz. Crack growth rates in air were found to be significantly reduced as a result of microstructural modifications associated with the beta anneal heat treatment. Although the salt water environment significantly accelerated crack growth rates for both alloys, this same ranking of fatigue crack growth resistance persisted in the present study. Both mirostructures of the Ti-6Al-4V alloy exhibited a frequency crossover effect. Out of plane cracking was observed in both alloys in the beta annealed condition. The effects of varying degrees of out of plane cracking on apparent crack growth rates are noted.

RADIATION EFFECTS IN AMORPHOUS METALLIC ALLOYS Progress Report, 1 Feb. 1981 - 31 Jan. 1982
R. B. Murray, J. J. Kramer, and D. G. Onn Sep. 1981 30 p refs
(Contract DE-AC02-80ER-10571)
(DE82-001603; DOE/ET-10571/4) Avail: NTIS HC A03/MF A01

The possible role of phosphorus segregation in radiation-induced changes in the magnetic properties of amorphous metallic alloys in the series Fe/sub x/Ni/sub 80-x/P/sub Y/B/sub 20-y/ (20 less than or equal to x less than or equal to 40; 0 less than or equal to y less than or equal to 14) was investigated. It is concluded that phosphorus segregation is, at most, only partially responsible for the observed increase in Curie temperature following irradiation, whereas phosphorus segregation may be largely responsible for the introduction of X-ray scattering centers by irradiation. Static domain studies, performed using the Bitter technique, suggest that both irradiation and annealing result in structural rearrangement, i.e., stress-relief anneal. TEM studies indicate no change in the amorphous structure before and after irradiation. The electrical resistivity of irradiated samples shows a temperature dependence at low temperatures somewhat different from that of virgin material. DOE

EFFECT OF THERMAL CYCLING ON THE MOVEMENT OF THE ALPHA Zr/ALPHA Zr-2.5 WT PERCENT Nb ALLOY
B. Cox and V. C. Ling May 1980 27 p refs
(AECL-6883) Avail: NTIS (US Sales Only) HC A03/MF A01; DOE Depository Libraries

A piece of CW Zr-2.5 wt% Nb alloy pressure tube was hydrided at one end in 40 g/L LiOH solution at 573 K (after nickel-plating that end). The result was a solid hydride layer 0.6 mm thick plus approximately 130 ppm hydrogen in the core under the nickel plate. Thermal cycling under conditions similar to those likely to be experienced during a reactor trip did not cause any significant movement of the (-)+hydride/(-) phase boundary along the tube for up to 2688 cycles from 573 to 523 K. Supercharging of the core was observed in the nickel-plated area. Conclusions concerning the origin of the hydrogen in the nickel-plated area, and the factors controlling the supercharging process are given. DOE

CHARACTERIZATION OF THE MICROSTRUCTURE OF STABILIZED ZIRCONIA USED ON DIESEL-ENGINE COMPONENTS
Ingard Kvernes 1980 22 p ref
(Contract DE-AC03-79ET-15324)
(DE81-029303; DOE/ET-15324/T2) Avail: NTIS HC A02/MF A01

Stabilized ZrO2 coatings have lowered the metal temperature and protected the coated parts against corrosion and thermal load. A coated value compared to an uncoated one shows upt to 500 C less metal temperature at normal load. The tested piston (3000 h) does not show any areas of ceramic coating loss at all, but the valve shows loss of a part of the ceramic coating in an area in the center of the valve plate after 500 h. This area corresponds to the diameter of the valve stem and may be due to the temperature distribution. Metallographic examination showed no base metal deterioration. This demonstrated that local coating loss will not necessarily result in damage to metal components. Results have shown that consideration should be given to improve the spraying technique, tailored coating and graded layers regarding temperature stresses in the base metal. It is also believed that a treatment after the coating process will be of advantage. DOE

Nickel vacancies on the aluminum rich side and substitutional Ni atoms on the nickel rich side are efficient strengtheners of the NiAl compound. Results show that above 54% Ni the substitutional Ni atoms can precipitate leading to a Ni2Al phase. An hexagonal structure with omega type distortion is discussed for this ordered phase. The critical temperature for ordering of Ni2Al is around 920 K. No precipitation is obtained between 50% and 54% Ni. In this range of compositions the yield stress of polycrystals was measured for temperatures going from 300 to 1250 K. Three stages are found in the sigma-T curves and discussed. Author (ESA)

HIGH TEMPERATURE COATINGS FOR GAS TURBINES: A REVIEW
A. J. A. Mom Jan. 1981 60 p refs In DUTCH; ENGLISH summary Presented at Corrosiedag 1980, Ede, Netherlands, 23 Oct. 1980

(NLR-MP-81003-U) Avail: NTIS HC A04/MF A01

The use of oxidation and corrosion resistant coatings in high temperature sections of aircraft gas turbines, marine gas turbines, and industrial gas turbines is discussed. The present state of the art and expected developments are pointed out. Different types of coatings (diffusion coatings, metallic overlays and ceramic coatings) and their properties are considered. Different techniques for the application of coatings are reviewed. In particular, the buildup, composition and structure of Al diffusion coatings and metallic overlays are described, including the effect of structure and composition on mechanical properties. Selection criteria for coatings in gas turbines are reevaluated, stressing service life, while presently available commercial coatings are assessed. Author (ESA)

FRICTION COEFFICIENT OF FLAME SPREAD MATERIALS Final Report [FROTTEMENT DE MATERIAUX PROJETES A CHAUD]

F. Mortier and B. Bourgouin May 1981 47 p In FRENCH

(CETIM-12-DO-71) Avail: NTIS HC A03/MF A01

The friction behavior of various flame sprayed coatings was determined in order to rationalize the choice of coating material vis a vis application. The coating materials tested were divided into three categories: metals and metallic alloys (NiAl, Mo, CoCrBW, NiCrBSi); metallic carbides (CW, TiC); and oxides (Cr_2O_3, Al_2O_3 + SiO_2). A wheel on plane tribometer was used. Two surface finishing techniques were employed: diamond wheel grinding and a superfinishing technique. Besides a tabular account of the friction properties of the different coatings, results are shown which highlight the superfinishing process. Author (ESA)

CHARACTERIZING HEAT TREATMENT INSTALLATIONS Final Report [CONTROLE DES INSTALLATIONS DE TRAITEMENTS THEMIQUES]

F. Rohart and A. Brucele Apr. 1981 177 p refs In FRENCH

(CETIM-12-G-199) Avail: NTIS HC A09/MF A01

The CETIM heat treatment facility is presented and its application in materials science is discussed. Problems encountered in the use of the installation are cited and remedies are proposed. Heat treatment can be either superficial (cementation, nitriding) or in-depth (annealing, tempering quenching, isothermal treatment). The equipment and furnaces are described. Studies reveal that the principal causes of uncertainty in heat treatment tests are insufficient temperature control of materials, reactivity between the environment and test specimens, and poor understanding of the laws governing heating and cooling of specimens. TEXTURE DEVELOPMENTS ASSOCIATED WITH ABNORMAL GRAIN GROWTH IN LOW CARBON STEEL SHEET Ph.D. Thesis

Chin-Fong Chang 1981 298 p

Avail: Univ. Microfilms Order No. 8200412

The phenomenon of abnormal grain growth in a low carbon aluminum killed steel sheet was investigated with special reference to the development of texture. The standard treatment sequences included: (1) hot band rapidly heated to 704 C and annealed for 5 hours to give AlN precipitation; (2) cold rolled 70%; (3) rapidly heated to 871 C and decarburized for 2 1/2 hours in a 90% moist argon-10% hydrogen atmosphere; (4) annealed at 871 C for 2-20 hours in a 62% argon-35% hydrogen atmosphere. The influence of a range of variables was investigated, the nature of the surface layer, the dew point, the decarburization temperature, and the heating rate. The surface layer of the hot band with finer grain size has been found to be critical to the development of abnormal grain growth. The growth kinetics show that the development of the (110) 001 texture is not a nucleation effect but results from the preferential growth characteristics of this orientation. The kinetic analysis also indicates that (110) 001 grains have a higher mobility than non (110) 001 grains, and that this appears to be associated with the pre-exponential term in the mobility equation. Dissert. Abstr.

Carboranyl-substituted polyphosphazenes are prepared by heat polymerizing a carboranyl halocyclophosphazene at 250 C for about 120 hours in the absence of oxygen and moisture. The cyclophosphazene is obtained by allowing a lithium carborane, e.g., the reaction product of methyl-o-carborane with n-butyllithium in ethyl ether, to react with e.g., hexachlorocyclotriphosphazene at ambient temperatures and in anhydrous conditions. For greater stability in the presence of moisture, the chlorine substituents of the polymer are then replaced by aryloxy or alkoxy groups, such as CF_3CH_2O. The new substantially inorganic polymers are thermally stable materials which produce a high char yield when exposed to extreme temperatures, and can thus serve to insulate less heat and fire resistant substances.

The results of experimental studies of photoluminescence and photoconductivity in cis- and trans-(CH)x are presented. For cis-(CH)x, we find recombination luminescence in the scattered light spectrum at 1.9 eV, near the interband absorption edge. The luminescence turns on sharply for excitation energies greater than 2.05 eV, implying a Stokes shift of 0.15 eV. Studies of the temperature dependence (T more than or equal to 7 K) show no loss of luminescence intensity even at temperatures as high as 300 K. Isomerization of the same sample quenches the luminescence; we find no indication of luminescence near the interband absorption edge of trans-(CH)x even at temperatures as low as 7K. These results are discussed in the context of parallel phototransport studies. The quenching of the luminescence upon cis-trans isomerization is concurrent with the appearance of a large photoconductive response. The photoconductivity in trans-(CH)x has a threshold at 1.0 eV, well below the interband absorption edge at 1.5 eV, implying the presence of states deep inside the gap. The observation of luminescence in cis-(CH)x, but not in trans-(CH)x; and the observation of photoconductivity in trans-(CH)x, but not in cis-(CH)x provide confirmation of the proposal that solitons are the photogenerated carriers. In trans-(CH)x, the degenerate ground state leads to free soliton excitations, absence of band edge luminescence, and photoconductivity. In cis-(CH)x the non-degenerate ground state leads to confinement of the photogenerated carriers, absence of photoconductivity, and to the observed recombination luminescence.

A reciprocating pin-on-plate apparatus was designed and constructed for the testing of friction and wear characteristics of ceramic materials. The machine was specifically constructed to conduct tests at cryogenic temperatures in a pressurized (300 psig maximum) helium atmosphere. Cryogenic testing was not accomplished but 17 ceramic materials were screened at room temperature in 15 psig helium. As a result of the screening tests, the materials were rank ordered according to their wear, and friction coefficients were tabulated. Several ceramics performed as well or better than fluorogold, a currently used seal material. Recommendations were made concerning additional materials to be tested and the materials characterizations needed for data analysis. Author (GRA)

Quantum chemical calculations on the large molecules are made with programs which also incorporate several desirable options for calculation on large molecules. There are two-major steps in the polymerization of cyclic ethers, the initiation step proportional to basicity and ring strain of the cyclic ether and the propagation step, attributed to the electrophilicity of the propagating carbocation. Electrostatic molecular potential contour maps generated from ab-initio MODPOT/VRDDO calculation basicities of these ethers and their propensity to undergo cationic polymerization. Calculations are made on the cyclic ethers and on the proton attack on these ethers to get a coherent overview of the initation problem. These maps also indicate good copolymer coordinates. These maps form a semiquantitative guide to the ease of polymerizability of energetic cyclic ethers. GRA

The influence of morphology on the structure-property relationships of polyvinylchloride-polyurethane blend systems was studied. Studies on blends of a segmented polyether polyurethane ET-38-1 with PVC were carried out utilizing differential scanning calorimetry (DSC), Rheovibron, stress-strain, infrared peak positions studies, and infrared dichroism experiments. As determined from DSC and Rheovibron data, THF-dioxane solution casting and melt processed samples are incompatible while THF solution casting produced a partially compatible polyurethane-PVC blend. However, similar uniaxial stress-strain data on all three series of samples indicate substantial polyether (soft segment of polyurethane) plasticization effect upon PVC, and therefore all of the blends can be considered as mechanically compatible. This produces useful blend systems of satisfactory mechanical properties with the PVC acting as a polyurethane stiffening agent. Such blends also exhibit improved flammability characteristics which are inherent to the PVC component. This is especially valuable in foamed elastomer or plastic applications. GRA

DETERMINATION OF THE HIGH TEMPERATURE STRENGTH OF CERAMIC. DISCUSSION OF TESTING TECHNIQUES: FLEXURAL AND TENSILE TESTS, CREEP

TESTS WITH FLEXURAL AND TENSILE LOAD
Werner Gebhard Oct. 1981 24 p refs Transl. into ENGLISH from "Die Ermittlung der Warmfestigkeit keramischer Werkstoffe. Diskussion der Pruefmethoden: Biege- u. Zugfestigkeit, Kriechen unter Biege- u. Zugbelastung", Rept. DFVLR-Mitt-81-03 DFVLR, Cologne, Jan. 1981
(ESA-TT-716; DFVLR-Mitt-81-03) Avail: NTIS HC A02/MF A01; DFVLR, Cologne DM 8,90

High temperature strength of ceramic materials was determined within the service temperature range of an automobile gas turbine. For the use of ceramics as construction materials in gas turbine assemblies, results for flexural and tensile behavior are of varying consequence. In particular for turbine blades, centrifugal force at the blade root entrains forces that can cause large mechanical strain. Test apparatus is described, and test philosophy for the characterization of creep is discussed. The stress exponent n of secondary creep rate is specified from flexural and tensile creep tests, and the n data of different ceramic materials is presented. Author (ESA)

HIGH-TEMPERATURE CORROSION RESISTANCE OF CERAMIC MATERIALS
T. A. Clancy 1981 37 p refs
(PB82-104399; BM-IC-8843) Avail: NTIS HC A03/MF A01 CSCL 11B

The Bureau of Mines reviewed and assessed the literature on corrosion resistance of ceramic materials. Corrosive conditions were categorized as: (1) acids and aqueous solutions, (2) glass and slag/metal melts, and (3) gases. Information on the corrosion resistance of ceramic materials, generally, is disseminated by many sources, each of which is interested in specific corrosive environments. Based on this survey, it was noted that (1) the development of standardized tests is needed to study solution-type corrosion of ceramics, (2) slag/melt corrosion data are the most comprehensive of the available data, and (3) better definition of corrosion mechanisms in gaseous environments is needed. Static charges and agglomerization of particles in a fluidized bed systems are minimized by maintaining in at least part of the bed a radio frequency glow discharge. This approach is eminently suitable for processes in which the conventional charge removing agents, i.e., moisture or conductive particle coatings, cannot be used. The technique is applied here to the disproportionation of calcium peroxide diperoxyhydrate to ield calcium superoxide, an exceptionally water and heat sensitive reaction. OXIDATION AND FORMATION OF DEPOSIT PRECURSORS IN HYDROCARBON FUELS Final Report
S. E. Buttrill, Jr., Frank R. Mayo, Bosco Lan, G. A. St.John, and David Dulin Jan. 1982 26 p refs
(Contract NAS3-22510)
(NASA-CR-165534; PYU-2115) Avail: NTIS HC A03/MF A01 CSCL 21D

A practical fuel, home heating oil no. 2(Fuel C), and the pure hydrocarbon, n-dodecane, were subjected to mild oxidation at 130 C and the resulting oxygenated reaction products, deposit precursors, were analyzed using field ionization mass spectrometry. Results for fuel C indicated that, as oxidation was initially extended, certain oxygenated reaction products of increasing molecular weights in the form of monomers, dimers and some trimers were produced. Further oxidation time increase resulted in further increase in monomers but a marked decrease in dimers and trimers. This suggests that these larger molecular weight products have proceeded to form deposit and separated from the fuel mixture. Results for a dodecane indicated that yields for dimers and trimers were very low. Dimers were produced as a result of interaction between oxygenated products with each other rather than with another fuel molecule. This occurred even though fuel molecule concentration was 50 times, or more greater than that for these oxygenated reaction products. Author

DESCRIPTION OF HOT SPOTS ASSOCIATED WITH LOCALIZED SHEAR ZONES IN IMPACT TESTS Research Report, Oct. 1979 - Sep. 1980
C. Stephen Coffey and Ronald W. Armstron 21 Oct. 1981 22 p refs
(AD-A108542; NSWC/TR-80-499) Avail: NTIS HC A02/MF A01 CSCL 19/1

A heat sensitive film technique has been employed to give spatial resolution to the observation of 'hot spots' in the impact deformation of soft ionic or molecular crystals and in crystal-filled polymer composites. The temperature of these 'hot spots' is estimated to exceed 250 C for even modest impact loads. The heating is interpreted to depend on local shear deformation. The rise in temperature associated with the movement of a number of equally-spaced dislocations is reexamined. An additional multiplicative effect for the temperature rise due to the dislocation number is obtained if the dislocations are released as a pile-up avalanche from an internal obstacle. This rise in temperature carries over to the association of localized heating of 'hot spots' with cracking within polymers because of the equivalence in the continuum approximation of a dislocation pile-up and a physical crack. Two reasons for the heating effect being especially important at cracking sites are that they are typified by the largest internal concentrations of stress which the material can bear before local fracture occurs, and, in so doing, the new crack surfaces supply a ready 'sink' for the dissipation of the internal energies at the tips of shear zones. DECOMPOSITION AND INTERACTION OF PROPELLANT INGREDIENTS Annual Progress Report, 1 Oct. 1980 - 30 Sep. 1981
K. J. Kraeutle and T. L. Boggs 30 Sep. 1981 7 p refs
(AD-A108135) Avail: NTIS HC A02/MF A01 CSCL 21/9

The program utilizes a wide variety of experimental methods as well as theoretical studies in specific areas such as burn rate modeling. These methods have been well documented in numerous presentations, publications, and patents. They allow the study of catalyzed and uncatalyzed decomposition of propellant oxidizers, binders, and metal fuels, and the evaluation of combustion characteristics, combustion performance, and combustion stability of experimental and production lot propellants. Where required, established test methods are modified or new methods are developed to meet specific needs such as in particle size analysis or ingredient modification. In-house or commercial analytical capabilities are employed whenever feasible or promising. The interpretation of results is facilitated by limiting the number of sample and test parameters as much as possible and by rigorous control of test variables. In the process, new options for tailoring of propellant combustion behavior, new propellant systems, and quality control of ingredients are evolved. Author (GRA)

EVALUATION OF A THERMAL RESPONSE TEST FOR ELECTROPYROTECHNICAL DEVICES: SUMMARY [EVALUATION DE L'ESSAI DE REPONSE THERMIQUE DES

DISPOSITIFS ELECTROPYROTECHNIQUES: RAPPORT DE SYNTHESES DES TRAVAUX]
P. Thebault Paris ESA 20 Jan. 1981 152 p refs In FRENCH Original contains color illustrations
(Contract ESTEC-3380/77)
(TP-15225/80; ESA-CR(P)-1467) Avail: NTIS HC A08/MF A01

The testing of electroexplosive devices, used for firing propellants, was investigated. Theory reveals the possibility of characterizing thermal response by two parameters relative to the heat transfer coefficient of the filament/propellant contact region and calorific capacity of the pyrotechnical interface. An electronic test apparatus was built which delivers an impulse current, rectangular waveform between 0.5 and 2 A of variable duration from 1 to 89 msec. Using the apparatus, experiments were carried out with normal and known-to-be defective initiators. Results show that the apparatus is suitable for measuring the theoretically identified parameters and that the test method is valid. Author (ESA)

ADAPTATION OF THE SIMPLEX GASIFICATION PROCESS TO THE COCONVERSION OF MUNICIPAL SOLID WASTE AND SEWAGE SLUDGE
J. C. Arbo, D. P. Glaser, M. A. Lipowicz, R. B. Schulz, and J. L. Spencer Apr. 1981 54 p Sponsored in part by EPA
(PB82-112418; NYSERDA-81-6) Avail: NTIS HC A04/MF A01 CSCL 21D

The combining of coal with biomass and sewage sludge in varying ratios to form simplex briquettes to be fed into gasifiers was examined. The use of biomass sewage sludge and municipal solid wastes permit the use of Eastern-caking coals in commercial medium Btu gasifiers. The results found that many of the 225 experimental briquette formulations meet required structural integrity prevent the clumping and fusing that have hindered effective gasification of this type of coal; and meet storage criteria. The briquettes developed, if commercially available, could convert an urban disposal problem into an energy resource permitting the use of less expensive and more readily available Eastern coal. GRA

COMPARISON OF COAL BASED SYSTEMS: MEDIUM-BTU GAS VERSUS SNG FOR INDUSTRIAL APPLICATIONS Final Report
Michael D. Peterik 1 May 1981 202 p refs
(Contract GRI-5014-310-0195)
(PB82-117383; GRI-80/0056) Avail: NTIS HC A10/MF A01 CSCL 21D

Production and total system economics of fuel gas from coal for industrial use were analyzed. It was found that low-Btu gas offers industry certain cost advantages over higher heat content fuel gases in specific applications, but that its use will be characterized by small scale on-site systems. Intermediate Btu gas (IBG), on the other hand, offers an incentive for gas industry involvement because of potential cost reduction to industry through a regional, centralized, utility owned system. Synthetic natural gas costs, benefiting from economics of scale and plant siting, offer industry the lowest cost alternative for the majority of systems studied. Author (GRA)

FUNDAMENTAL CONSIDERATIONS FOR PREPARING DENSIFIED REFUSE DERIVED FUEL Final Report
George J. Trezek, George M. Savage, and Daniel B. Jones Sep. 1981 59 p refs
(Grant EPA-R-805414)
(PB82-101666; EPA-600/2-81-180) Avail: NTIS HC A04/MF A01 CSCL 21D

A series of pilot scale tests were conducted to determine the effects of various parameters on the densification of refuse derived fuel. The experiments included a series of bench scale experiments involving a single die arrangement, as well as larger scale studies in which a commercial pellet mill was used. The bench scale tests (tests in which the pellets were individually formed), were conducted both to provide data needed for an analysis of the basis dynamics of pellet formation and as an aid in the interpretation of results obtained with the pellet mill. The energy required to overcome die friction was studied independently of the energy consumed in material deformation and compression. The specific effects of die length, diameter, and taper were determined. GRA

COMPARATIVE STUDY OF AIR CLASSIFIERS Final Report
Vern Hopkins, Bruce W. Simister, and George M. Savage (Cal Recovery Systems, Inc.) Sep. 1981 294 p refs Sponsored in part by Naval Civil Engineering Labs.
(Contract EPA-68-03-2730)
(PB82-106121; EPA-600/2-81-221) Avail: NTIS HC A13/MF A01 CSCL 21D

The results of field tests of seven different air classifier systems are presented. The systems are compared in regard to their capacity to handle refuse and separate it into a heavy fraction and a light fuel fraction; their ability to concentrate lights in the light fraction and heavies in the heavies fraction as compared to the infeed; the quality of the light fraction for refuse derived fuel; the yield of combustibles from the infeed that are collected in the light fraction; the consumption of air required to handle a given quantity of infeed; and costs (engineering, capital, and operation and maintenance) per unit weight of refuse infeed at design capacity. Tests were run on each classifier at three airflow rates and at 5 to 10 refuse infeed rates. Procedures used to run these tests are given, and treatment of samples taken from light and heavy fraction streams is outlined. GRA

FINITE-ELEMENT FORMULATION FOR THE ANALYSIS OF INTERFACES, NONLINEAR AND LARGE DISPLACEMENT PROBLEMS IN GEOTECHNICAL ENGINEERING Ph.D. Thesis
Adolfo E. Zeevaert 1980 285 p
Avail: Univ. Microfilms Order No. 8124300

A mathematical formulation to model the behavior under load of a reinforced soil system, where a fabric is placed over a soft soil and covered with stone for use as a temporary haul road is discussed. This approach is used to improve the behavior of temporary roadways, particularly where very soft soils are encountered. The stress distribution and the load-deformation characteristics of the soil-fabric system for varying geometries and material properties are defined. Included in the mathematical formulation are such features as: nonlinear behavior of the soil and fabric materials, friction parameters of the interface, tension characteristics of the fabric materials, large displacements in finite deformation, 'no tension' conditions of the cohesionless materials, and yielding of plastic materials. The mathematical model is a more complete approximation of the actual fabric-soil system than is presently available. Dissert. Abstr.

PHYSICAL AND CHEMICAL CHARACTERISTICS OF SYNTHETIC ASPHALT PRODUCED FROM LIQUEFACTION OF SEWAGE SLUDGE Final Report, Sep. 1979 - Apr. 1981

J. M. Donovan, T. R. Batter, R. K. Miller, and R. P. Lottman (Idaho Univ., Moscow) Oct. 1981 67 p refs
(Grant EPA-R-806790)
(PB82-119082; EPA-600/2-81-242) Avail: NTIS HC A04/MF A01 CSCL 13B

Direct thermochemical liquefaction of primary undigested municipal sewage sludge was carried out to produce a low molecular weight steam volatile oil, a high molecular weight synthetic asphalt, and a residual char cake. The latter product is capable of supplying the thermal energy requirements of the conversion process. The steam volatile oil has immediate value as a synthetic fuel oil. The synthetic asphalt may prove to be a useful cement for paving or for fuel or coking stock. The thermochemical liquefaction process should be capable of operating technically and in an environmentally acceptable manner in conjunction with many existing waste water treatment facilities. The overall feasibility of the process depends on the value of the oil and synthetic asphalt products as petroleum replacements, and on the costs associated with disposal of sludge. GRA

COLLAPSE LIMIT STATES OF REINFORCED EARTH RETAINING WALLS

M. D. Bolton and P. L. R. Pang (Allott and Lomax) 1981 67 p refs
(PB82-113515; CUED/D-SOILS/TR-102-1981; ISSN-0309-7439) Avail: NTIS HC A04/MF A01 CSCL 08M

The use of systems of earth reinforcement or anchorage is gaining in popularity. It therefore becomes important to assess whether the methods of design which were adopted for such constructions represent valid predictions of realistic limit states. Confidence can only be gained with regard to the effectiveness of limit state criteria if a wide variety of representative limit states were observed. Over 80 centrifugal model tests of simple reinforced earth retaining walls were carried out, with the main purpose of clarifying the nature of appropriate collapse criteria. Collapses due to an insufficiency of friction were shown to be repeatable and therefore subject to fairly simple limit state calculations. GRA

THE CAPENHURST WESTAIR HIGH TEMPERATURE HEAT PUMP DRYER

J. L. Driscoll, M. P. Bertinat, F. G. Drakesmith, J. T. Griffith, D. L. Hodgett, F. W. Sharman, R. Stirling, I. Strutt, B. J. Taylor, and R. H. Johnson Jun. 1981 27 p
(PB82-116690; ECRC/R-1440) Avail: NTIS HC A03/MF A01 CSCL 13A

The Capenhurst Westair High Temperature Heat Pump Dryer is an efficient electrical system for batch convection drying of solids such as timber. The use of a heat pump enables heat from the water evaporated to be recovered and re-used in the dryer. Energy requirements can be reduced by up to two thirds with significant savings in running costs. Capenhurst has progressed heat pump drying technology so that products can now be dried at temperatures up to 80 C. A 9 kilowatt packaged heat pump unit utilizing this technology was produced through a program of joint research and development with Westair Dynamics Ltd. The Capenhurst Westair Dryer, its development and the benefits of using the system for drying timber and other products, is described. GRA

CERAMIC ROADWAY AGGREGATES WITH IMPROVED POLISH AND WEAR RESISTANCE Final Report, Mar. 1977 - Dec. 1980

Arthur V. Petty, Jr. Aug. 1981 107 p refs
(PB82-103987; FHWA/RD-81/136) Avail: NTIS HC A06/MF A01 CSCL 13C

Synthetic ceramic aggregates having high wear- and polish-resistance were developed. Three hundred aggregate compositions, incorporating a variety of low-cost 'waste' materials were evaluated. Aggregates were produced using conventional ceramic processing techniques and fired at temperatures ranging from 900-1,500 C. British Wheel and L. A. Abrasion tests were used for initial screening of the aggregates. These data, raw material costs, availability, and energy requirements, were used to select nine compositions for circular track tests. Economic evaluations showed that present production costs, based on a 1,000 ton-per-day operation ranged from $10 to $120 per ton

of material produced. Guyana bauxite was used as a standard.

THE 2ND SEMINAR ON EFFICIENT METAL FORMING AND MACHINING

1980 252 p refs Proceedings of Conf. held at Pretoria, 18 Nov. 1980
(PB82-109745; CSIR-S-234; ISBN-0-7988-2015-2) Avail: NTIS HC A12/MF A01 CSCL 13H

Metalspinning, shear and flow forming are discussed. Optimized machining is surveyed. Automatic tool wear compensation is addressed. Ceramic coatings for wear resistance are covered. Creep grinding using diamond wheel is presented. Economics of numerical control machining are reported. Amber Boron Nitride and its industrial application is discussed. Wear resistant coatings on hard metal are described. The explosive hardening of metals is examined. The selection of machining parameters using Amborite on hard ferrous material is discussed. Drawing and wall ironing of metal cans is investigated. Economical cutting with the CO2 gas laser is presented. Developments in the deep drawing of a cylindrical cup are considered. Training black machinist is reviewed. The role of investment casting in modern engineering practices is covered. Cold forming of internal threads is included. High speed steel cutting tools are described. Hot forging is summarized.

HOT ROLLED ASPHALT: EFFECT OF BINDER PROPERTIES ON RESISTANCE TO DEFORMATION

F. A. Jacobs 1981 22 p refs
(PB82-122664; TRRL-LR-1003; ISSN-0305-1293) Copyright. Avail: Issuing Activity CSCL 13C

Those properties of binders that most affect the resistance to deformation of rolled asphalt are discussed. Thirteen binders were studied and mixtures containing them were subjected to design tests and the wheel tracking test. These laboratory mechanical tests show that, within the range of binders tested, significant improvements in resistance to deformation can be achieved over a range of high road temperatures by increasing the softening point of the binder, irrespective of its penetration at 25 C.

ENERGY EQUIVALENTS FOR SELECTED PAVEMENT MATERIALS: THEIR PRODUCTION AND PLACEMENT Final Report, Dec. 1978 - Mar 1981

Keith R. Lane Mar. 1981 105 p refs Prepared in cooperation with FHWA, Washington, D.C.
(Proj. HPR-569)
(PB82-121187; FHWA-CT-81-4; Rept-569-F-81-4) Avail: NTIS HC A06/MF A01 CSCL 13C

Energy requirements for selected pavement surfaces are discussed. Energy requirements for hot-mixed bituminous recycling and portland cement concrete recycling projects are presented along with conventional pavement methods. Energy requirements for conventional thin surface treatments are also discussed. Environmental analyses involving both air and noise quality measurement are included for various recycling and conventional paving options.

PROPERTIES OF PORTLAND CEMENT CONCRETES CONTAINING POZZOLANIC ADMIXTURES

D. D. Simmons, T. J. Pasko, Jr., and W. R. Jones Apr. 1981 52 p refs
(PB82-120965; FHWA/RD-81/184) Avail: NTIS
HC A04/MF A01 CSCL 13C

A laboratory comparison was made of the properties of a concrete containing no pozzolan with several mixtures containing pozzolans. Used were a natural pozzolan (Lassenite), two fly ashes of different fineness and low carbon and an amorphous silica fume dust from a metal-producing plant. One cement, one coarse crushed limestone aggregate, and one fine river aggregate were used. Replacing a faster reacting binder with a slower one, produced lower early strengths and adversely affected the properties which are highly dependent on strength. The measures of durability were greatly affected by the air contents and aging or treatment prior to exposure. The amorphous silica fume dust increased the early strengths of a fly ash mixture. GRA

ANALYSIS OF THERMAL STRESSES IN INTERNALLY SEALED CONCRETE BRIDGE DECKS Final Report, Jul. 1977 - Dec. 1979

S. George Fattal, Timothy A. Reinhold, and Bruce Ellingwood Apr. 1981 119 p refs Sponsored by the Federal Highway Administration
(PB82-122888; FHWA/RD-80/085) Avail: NTIS
HC A06/MF A01 CSCL 13B

A structural model was developed for use with a finite element program to predict thermal stresses which result from the application of heat to the concrete decks of highway bridges. The decks are heated to obtain an internally sealed concrete so as to better protect the reinforcement from deicer induced corrosion. Simple decks were first studied to determine the sensitivity of the solutions to various modeling assumptions. Two full scale bridge decks were also analyzed for which the temperature distributions are predefined on the basis of field data. The model will provide a helpful tool which will enable future field measurements to be planned more selectively. It will also provide insight on means for improving the heat treatment process so as to minimize cracking damage. GRA

ANALYSIS OF POST-TENSIONED GIRDER ANCHORAGE ZONES

W. C. Stone and J. E. Breen Jun. 1981 174 p refs Prepared in cooperation with the Federal Highway Administration, Austin, Tex.

(PB82-122268; CTR-3-5-77-208-1; FHWA/TX-81/13-208-1; RR-208-1) Avail: NTIS HC A08/MF A01 CSCL 13B

Several large thin-webbed box girders, with post-tensioned anchorage zones experienced large cracks along the tendon path in the anchorage zones at the design stressing load. Cracking provides a path for penetration of moisture and salts and thus presents a potential corrosion and frost damage threat. Such cracking negates the use of prestressed concretes. An extensive literature review which documents the state of the art in anchorage zone analysis behavior, and design recommendations is summarized. The general utilization of a three dimensional finite element program, PUZGAP3D, for analysis of the complex anchorage zone region is outlined. The program was used to study straight and curved tendon paths. GRA

ECONOMIC LOSSES IN THE COLUMBUS SMSA DUE TO LONG-RANGE TRANSPORT OF AIRBORNE RESIDUALS IN THE OHIO RIVER BASIN ENERGY STUDY REGION

Walter P. Page and John M. Gowdy Oct. 1981 129 p refs
(Grant EPA-R-805585)
(PB82-110735; EPA-600/7-81-161) Avail: NTIS HC A07/MF A01 CSCL 13B

Central Ohio is an area where the long range transport of air pollutants is a problem, and a relatively small increase in pollution emitted from sources within the standard metropolitan statistical area (SMSA) could cause the area to violate federal primary standards for sulfur doxide and particulates. The potential loss in economic product to the Columbus SMSA is estimated by calculating the difference in economic output between the projected increase in potential output possible under existing air quality regulations without additional background pollution from new out of area fossil fuel power plants, and the projected increased in output possible when this additional source of pollution is taken into account. Estimated losses are provided for seven different ORBES scenarios. GRA

OHIO RIVER BASIN ENERGY STUDY: LAND USE AND TERRESTRIAL ECOLOGY Final Report

J. C. Randolph and William W. Jones Sep. 1981 177 p refs
(Grant EPA-R-805609)
(PB82-110347; EPA-600/7-81-062) Avail: NTIS HC A09/MF A01 CSCL 13B

Land use and terrestrial ecology data and analyses for the Ohio River Basin Energy Study (ORBES) region consisting of all of Kentucky, most of West Virginia, and substantial portions of Illinois, Indiana, Ohio, and Pennsylvania is presented. This 122 million acre region has a variety of land uses, which are summarized. Also discussed is the terrestrial ecology of the region (climate, physiography, soils, flora, fauna, and ecosystem dynamics). For the various ORBES energy development scenarios, land use conversion due to energy-related use was calculated, and impacts on terrestrial ecology were determined by application of the terrestrial ecosystem assessment methodology developed for ORBES. A sonar method and apparatus is discribed which utilizes a linear frequency chirp in a transmitter/receiver having a correlator to synthesize a narrow beamwidth pattern from otherwise broadbeam transducers when there is relative velocity between the transmitter/receiver and the target. The chirp is so produced in a generator in bandwidth, B, and time, T, as to produce a time bandwidth product, TB, that is increased for a narrower angle. A replica of the chirp produced in a generator is time delayed and Doppler shifted for use as a reference in the receiver for correlation of received chirps from targets. This reference is Doppler shifted to select targets preferentially, thereby to not only synthesize a narrow beam but also aim the beam in azimuth and elevation.

EFFECTS OF ATMOSPHERIC TURBULENCE ON MICROWAVE AND MILLIMETER WAVE SATELLITE COMMUNICATIONS SYSTEMS Ph.D. Thesis

Daniel Manoharan Jothiraj Devasirvatham 1981 230 p

Avail: Univ. Microfilms Order No. 8128988

A model of the microwave and millimeter wave link in the presence of atmospheric turbulence, with emphasis on satellite communications systems is described. The analysis is based on standard methods of statistical theory. Effects of turbulence on the received wave are studied using the Kolmogorov, Von Karman, and Gaussian models, and compared. An equivalent structure constant is also defined for the latter. A generalized theory of the aperture antenna in turbulence is formulated. The uniform and tapered circular aperture antennas are specifically evaluated for any arbitrary angle of arrival of the wave in the main beam, and related to each other. Receivers are classed as synchronous and asynchronous. The signal measured by each class is described. Using experimental results, an equivalent atmosphere, homogeneously turbulent over the propagation path, with appropriate parameters, is shown to be suitable for prediction of long term average behavior. Dissert. Abstr.

N82-18446 Ohio State Univ., Columbus.

A FOUR-PHASE MODULATION SYSTEM FOR USE WITH AND ADAPTIVE ARRAY Ph.D. Thesis

Jack H. Winters 1981 248 p

Avail: Univ. Microfilms Order No. 8129119

The use of four-phase modulation in a communication system with an adaptive array is discussed. A system is described that provides protection against both conventional (i.e., noise and CW) and smart (in particular, repeat) jamming with rapid acquisition of the signal at the receiver. Four-phase modulation techniques and how they can be used with an adaptive array are discussed. Reference signal generation for the LMS adaptive array is discussed for these modulation techniques. A communication system is then described that uses one of these modulation techniques. The four-phase signal consists of two orthogonal biphase signals. One signal contains a short code for rapid acquisition. The other contains a long code for protection against smart jammers. A several step signal acquisition technique is also described for the system. The short code timing is first acquired by sliding correlation method. The system is then analyzed theoretically. Dissert. Abstr.

N82-18447 Royal Signals and Radar Establishment, Malvern (England).

IMPEDANCE OF MONOPOLE ANTENNAS ON VEHICLES BY MOMENT METHODS

D. J. Brammer 23 Sep. 1981 12 p refs

(RSRE-MEMO-3414; BR81100) Copyright. Avail: Issuing Activity

The accuracy with which impedance is calculated was investigated by checking NEC 1 predictions against theoretical and experimental literature data for an idealized shape. A copper model was measured using a network analyzer. Good results are obtained if: large changes are avoided in dimension between element length in the monopole and element length or patch size in modeled surface; and capacitance values needed to adjust impedances to their idealized values are found.

DETERMINATION OF THE FIELD SCATTERED BY AN AXIALLY INCIDENT PLANE WAVE [DETERMINACAO DO CAMPO ESPALHADO POR UM PARABOLOIDE, DEVIDO A UMA ONDA PLANA AXIALMENTE INCIDENTE]

L. B. T. Cividanes and C. E. Santana Jul. 1981 39 p refs In PORTUGUESE; ENGLISH summary

(INPE-2179-NTE/175) Avail: NTIS HC A03/MF A01

The application of the geometrical theory of diffraction (GTD) to the determination of the electromagnetic field scattered by a paraboloidal reflector under axial plane wave illumination is described. The method of calculation is illustrated through applications to a small antenna (D=50 lambda) and to a large one (D=400 lambda). It is shown that the GTD is very accurate and fast in calculating the scattering by a paraboloidal reflector in its focal region. As compared to the more traditional methods of calculation, namely the geometrical and physical optics, the GTD offers marked improvement and advantage. T.M.

COMPUTER PREDICTION OF DUAL REFLECTOR ANTENNA RADIATION PROPERTIES

Christos Christodoulou Nov. 1981 138 p refs

(Grant NsG-1588)

(NASA-CR-165114) Avail: NTIS HC A07/MF A01 CSCL 20N

A program for calculating radiation patterns for reflector antennas with either smooth analytic surfaces or with surfaces composed of a number of panels. Techniques based on the geometrical optics (GO) approach were used in tracing rays over the following regions: from a feed antenna to the first reflector surface (subreflector); from this reflector to a larger reflector surface (main reflector); and from the main reflector to a mathematical plane (aperture plane) in front of the main reflector. The equations of GO were also used to calculate the reflected field components for each ray making use of the feed radiation pattern and the parameters defining the surfaces of the two reflectors. These resulting fields form an aperture distribution which is integrated numerically to compute the radiation pattern for a specified set of angles. T.M.

LINK AVAILABILITY IN SATELLITE TELECOMMUNICATION SUBJECT TO CORRELATED RAIN ATTENUATION AT THE GROUND TERRAIN

Aydano B. Carleial and Janio Kono Nov. 1981 22 p refs Presented at IEEE Intern. Conf. on Commun.
(INPE-2280-PRE/058) Avail: NTIS HC A02/MF A01

A link model for satellite telecommunication is presented, and the problem of link outage due to signal strength attenuation caused by rain in the two propagation paths (Earth-to-space and space-to-Earth) is considered. A joint probability density for up-path and down-path losses is used for computation of link availability by numerical integration of the density over the region of the plane that corresponds to satisfactory telecommunication. It is shown that correlation between the marginal probability densities for the two path losses can have a significant effect on link availability for SCPC networks. The importance of this result lies in the fact that, in satellite networks with a large number of thin-route users, ground terminals are sometimes so close to each other that rain events and rates of rainfall at their sites cannot be assumed independent. A DOUBLE-BALANCED MIXER FOR 2 GHz [MISTURADOR DUPLAMENTE BALANCEADO PARA 2 GHZ]

Eduardo Antonio Parada Tude and Lucio Baptista Trannin Cividanes Jul. 1981 11 p refs In PORTUGUESE; ENGLISH abstract Presented at the 33rd Ann. Meeting of SBPC, Salvador, Bahia, Brazil, 8-15 Jul. 1981 Original contains color illustrations
(INPE-2150-RPE/371) Avail: NTIS HC A02/MF A01

The design and construction of the mixer and of a microstripline filter are described. The mixer and filter are intended to upconvert a signal of 75 MHz, +10 dBm to an IF, signal at 1995 MHz. The mixer output signal will feed an earth station transmitter. In order to function with this high input level, the mixer was built with four pairs of Schottky diodes, each pair connected, in series to a star configuration. The coupling of the signals to the diodes is accomplished through a strip-line balanced line hybrid coupler. Strip-line baluns are used to connect the balanced line hybrid to the unbalanced 50 ohms ports. Using conventional glass-encapsulated diodes, the mixer exhibited a dB conversion loss, and the measured 1 dB compression point was +10 dBm. T.M.

A NEW EXTERNAL LIMIT TO THE CAPACITY OF INTERFERENCE CHANNELS [UM NOVO LIMITANTE EXTERNO A CAPACIDADE DO CANAL COM INTERFERENCIA]

Aydano Barreto Carleial Jul. 1981 20 p refs In PORTUGUESE; ENGLISH abstract Presented at the 33rd Ann. Meeting of SBPC, Salvador, Bahia, Brazil, 8-15 Jul. 1981
(INPE-2162-RPE/380) Avail: NTIS HC A02/MF A01

An interference channel is a communication network where two senders communicate with two receivers through a shared medium, in such a way that the flow of information over the first link (from the first sender to the first receiver) can impair the flow over the second link, and vice versa. If R1 and R2 are the rates of information transmission over the first and second link, respectively, the channel's capacity region is the set of pairs (R1,R2) which are jointly achievable in reliable communications. The problem of determining the capacity region has been solved only in some special cases, in particular in strong interference cases. A new outer bound on the capacity region of the Gaussian interference channel is demonstrated by means of the technique involving degradation of a modified channel by added noise. In those cases where the interference is of medium intensity, which in practice, are more common than strong interference cases, the new bound is significantly, tighter than previously known outer bounds. HC A04/MF A01 CSCL 20/14

This report presents solutions of the one- and two-dimensional integral equations that describe groundwave propagation. Considered are the effects of: (1) terrain irregularities that are narrower than a Fresnel zone, and (2) receiver elevations. The results define the condition under which the simpler one-dimensional equation can be used, as well as those that demand the more complicated two-dimensional form. A frequency of 100 kHz is assumed throughout, although certain results are easily scaled to other frequencies. It is well known that the one-dimensional equation is invalid unless the terrain is nearly uniform across a Fresnel zone. It has been found that for obstacles narrower than about 10 km and typical path-lengths the one-dimensional equation erroneously predicts propagation anomalies that (1) are independent of width, and therefore too large, and (2) diminish too slowly at long distances. Considerable error can be incurred by applying the one-dimension equation to moderately sized terrain features. For example, for a path-length of 500 km, that equation overstates by a factor of four unless the diameter approaches a Fresnel zone width-which exceeds 10 km for long propagation paths. Even for wide obstacles, the one-dimensional formulation neglects reflection and interference phenomena. GRA

This report presents an iterative method for inverting VLF/LF ionosounding data to obtain ionospheric conductivity profiles. The relationship between the detail that can be realized in the calculated profile and the quality and quantity of the reflection data is given explicitly. Only altitudes below about 70 km where the propagation can be assumed isotropic are considered, although the method can be extended to anisotropic propagation. The method is demonstrated by applying it to two qualitatively different ionospheric models: a strong SPE disturbance and a C-layer exhibiting a well-defined conductivity peak. Ground-level reflection data contain information only about those heights from which significant energy is returned. The calculated profiles agree well with the true profiles over the height range where the strongest reflections occur, and break down outside of that range. The solutions converge toward the true profiles despite the use of initial estimates that contain no information about the true ionospheric structure. The height resolution actually achieved for the two examples is much better than the theoretically predicted limit. Author (GRA)

The failure of mechanical or electromechanical components in systems and equipment does not have a direct bearing upon the operational reliability and the logistic support costs. The basic objective of this assessment was to obtain and review all readily available historical and statistical data on selected C3I systems and components. The second was to obtain through structured but informal discussions the opinions and observations of qualified experts in each phase of system planning, research, development, acquisition, operations and logistic support of C3I systems. A SURVEY OF THE LIMITS ON RADAR IMAGING Final Report
Irvin W. Kay Oct. 1981 63 p refs
(Contract MDA903-79-C-0202)
(AD-A108598; AD-E500447; IDA-P-1586; IDA/HQ-81-23521) Avail: NTIS HC A04/MF A01 CSCL 17/9

Theoretical limits on the performance of millimeter-wave radar imaging systems is explored. Recognition by shape and, as far as possible, identification of military targets on the ground is their purpose. It is concluded that, with the possible exception of synthetic aperture radar, such systems, using antennas of a practical size, cannot provide adequate resolution for imaging, as defined in the ordinary sense, tank-size targets over ranges of tactical interest. Target characteristics that effect image quality, the image quality needed for target recognition and identification, and the theoretical relations between optical system parameters and image properties such as depth of field and resolution are considered. Also considered are the appropriateness of various definitions of resolution that appear in the literature, distinctions that must be made between extended targets and point targets, and differences between coherent and incoherent illumination with respect to resolution. The possibility of improving image quality, particularly resolution, with the aid of superresolution techniques and apodization is also discussed. It also estimates possible reduction in the number of elements in a large antenna array using an optimum array thinning distribution of the elements. GRA

This report contains the results of a test and evaluation utilizing commercially available Reduced Rate Multiplexers performed by RADC's Digital Communication Experimental Facility (DICEF) in support of DCA/DCEC. Unlike previous work in this area, the subject program considered the effect of an analog telecommunications channel prior to digitization by a Continuously Variable Slope Delta Modulation (CVSD) encoder. The major conclusion drawn from this evaluation is the fact that a system incorporating a 32 KB/S CVSD in tandem with a conventional analog telephone channel of relatively poor quality can support 2400 B/S modem transmission. A rocket-borne payload, carrying both veritcal and horizontal magnetic dipole antennas and receiving instrumentation, was flown from Wallops Island, Virginia, to observe the Transverse Electric (TE) and Transverse Magnetic (TM) polarization components of individual sferics at 30 kHz. During the 2-1/2 min flight to apogee at 96 km, 293 individual sferics were observed. Upon applying corrections for difference in azimuthal antenna patterns, it was concluded that the TM noise fields were larger than the TE fields by about 15 dB near the ground, and approximately equal at 60 km. (AD-A108181; RADC-TR-81-224) Avail: NTIS
HC A04/MF A01 CSCL 09/1

A technique for obtaining the pulse response of antennas utilizing steady-state measurements on a Scientific-Atlanta 2020 antenna range is described. The method involves making wideband frequency measurements, both amplitude and phase, centered about the defined carrier frequency and transforming the data to low frequency. This result is multiplied by the complex Fourier Transform of a pulse (the modulating pulse) utilizing Fast-Fourier-Transforms and the inverse FFT yields the desired pulse response. All computations are done on the 2020 System Computer (Hp 21 MX Series 1000). Techniques for eliminating the frequency response of system components are described. The technique essentially treats the antenna on a 'transfer function' basis. Therefore, results are presented on the response of a transmission line system and this is compared with theory. Finally, results on the pulse response of various antennas are presented. Author (GRA)

Side-Looking Airborne Radar (SLAR) detection data were gathered in conjunction with four visual detection experiments designed to improve search planning guidance contained in the National Search and Rescue Manual. HC-130 aircraft, equipped with either the Airborne Oil Surveillance System (AOSS) or SLAR/radar image processor (SLAR/RIP) configuration of the AN/APS-94C or D SLAR, conducted controlled searches for life rafts, small boats, and 41- to 95-foot Coast Guard vessels in Block Island Sound or open ocean. Using a microwave tracking system and SLAR data, the positions of searchers and targets were accurately reconstructed to facilitate the verification of detections on SLAR films or video tape. These data were used to evaluate the effects of environmental and controllable parameters on SLAR detection of the various target types. Target size/composition search altitude, swell height, wind speed, and humidity/precipitation were found to have a significant influence of SLAR detection performance. Upper-bound lateral range curves and sweep widths for SLAR search are included. Real-time performance tests for AN/APS-94D SLAR and system performance tests for new SLARs (AN/APS-131) are recommended. GRA

(AD-A108192; CRREL-SR-81-23) Avail: NTIS
HC A02/MF A01 CSCL 17/9

In 1974, personnel at the U.S. Army Cold Regions Research and Engineering Laboratory (CRREL) began using an impulse radar system to profile accumulations of ice forms. The system was modified for effective use as a profiling system in a ground or airborne configuration, in certain high-noise environments. The system can penetrate fresh water and media with a high water content. Frazil and brash ice accumulations with approximately 50% water were profiled to a depth of 25 to 35 ft. As a result of the CRREL modifications, the system has found extensive and varied applications as a low-level remote sensing tool. Applications include profiling ice accumulations (including ice jams), river beds, sheet ice, permafrost, subsurface ice masses, river bank revetments through air-entrained water, snow covers, sea ice, icebergs, and peat bogs. Limited laboratory work has also shown that the impulse radar system may be able to detect oil and gas under sea ice. Selected applications and data are presented. Since it was used mainly for research, the CRREL system needs further development to make it useful to operational units. Additional development of hardware and software is recommended. GRA

MULTIPATH VLF PROPAGATION EFFECTS ON CORRELATION RECEIVERS

Francis J. Kelly, J. P. Hauser, H. M. Beck, and F. J. Rhoads 18 Sep. 1981 52 p refs
(AD-A108408; NRL-8521) Avail: NTIS HC A04/MF A01 CSCL 20/14

The effect of electromagnetic propagation at very low frequency in the Earth ionosphere waveguide can distort wideband communication waveforms and produce a splitting of the correlation peak of the received signal at a model interference null where multipath signals arrive out of phase. Propagation from an inclined dipole antenna trailed behind an orbiting aircraft can cause split correlation pattern to fluctuate throughout the orbit period. For the case of an MSK (minimum-shift-keying) signal format, expressions and graphs are given for the correlation vector, as a function of receiver synchronization time and aircraft flight direction.

ELECTROMAGNETIC COUPLING TO A CONDUCTING BODY OF REVOLUTION WITH A HOMOGENEOUS MATERIAL REGION
Joseph R. Mautz and Roger F. Harrington Griffiss AFB, N.Y. RADC Jul. 1981 66 p refs
(Contract F30602-79-C-0011; AF Proj. 2338)
(AD-A108395; RADC-TR-81-202) Avail: NTIS
HC A04/MF A01 CSCL 20/3

A numerical solution for electromagnetic coupling to a perfectly conducting body of revolution with a loss-free homogeneous material region is developed. The material region is exposed by a rotationally symmetric aperture in the conducting body. Application of the equivalence principle introduces an unknown electric current on the surface of the conducting body, and both an unknown equivalent electric current and an unknown equivalent magnetic current in the aperture. These currents satisfy the integral equations obtained by annihilating the tangential components of the electric field on the surface of the conducting body and by enforcing continuity of the tangential components of the electric and magnetic fields across the aperture. These integral equations are solved numerically by means of the method of moments. Numerical results are presented for four different conducting bodies, each of which has a dielectric region and is excited by an axially incident plane wave. The computer program used to calculate these currents allows for the more general case of oblique incidence.

(AD-A108337; LIDS-TH-1162) Avail: NTIS
HC A07/MF A01 CSCL 17/2

The multiple access problem is one of organizing a population of users so that they may efficiently share the resources of a single communication channel. This problem is examined under the modeling assumptions of a finite user population and a time slotted channel with limited feedback. Techniques of schemes for coordinating the transmissions of users are called multiaccess protocols. Simple relationships among common steady state measures of protocol performance (including throughput and average delay) are derived. It is shown that the performance measures are equivalent in the sense that (1) each may be expressed as a simple function of any one of the others and (2) a protocol which is optimal with respect to any one measure is optimal with respect to the others. The derived relationships are also used in the performance analysis of perfect scheduling and TDMA. Four related classes of multiaccess protocols are defined, examined, and an optimal protocol is characterized. The optimization problem is formulated as a Team problem for three classes. Using results from Markov decision theory, optimal window protocols are derived for the cases of two and three users.

HC A02/MF A01 CSCL 17/9

Measurements of propagation at a frequency of 1090 MHz over terrain that produces specular reflection and knife-edge diffraction are in good agreement with model calculations that use images to represent the effect of reflection. A hill covered with a pine forest formed the diffracting mask, and an airport area formed the reflecting surface. Agreement between measurements and model calculations required that the diffracting knife-edge be located at treetop level. Optimum propagation into the shadow region was obtained when a maximum in the reflection-lobe pattern coincided with the mask angle.

HC A05/MF A01 CSCL 20/14

An exact analytical technique for determining induced electromagnetic fields in a one dimensional medium is developed. The incident field, which impinges normally on the medium, is an electromagnetic pulse of arbitrary shape and duration. The medium is of finite depth and can have arbitrarily specified and nonconstant permittivity and conductivity. This analytical result is implemented in a computer program called HATS (High Accuracy Temporal Solution), which is virtually free of numerically dispersion. Several sample problems are formulated and then solved via this program. Appendix B supplies a manual that details use of the program and includes a source listing of HATS, sample input, and plots.

HC A06/MF A01 CSCL 09/5

The effect of metallic fences on mutual coupling between slots of a slot antenna is studied. A model solution has been obtained whereby the fence is modelled as a thin half elliptic cylinder. This model allows for thickness to be taken into account and provides exact solutions to mutual impedance computations. The geometrical theory of diffraction has been adopted to analyze an exceedingly thin fence, when the slot antennas are not too close to the fence. Design procedures for longitudinal and traverse stripline-fed slots have been developed. A design procedure for such slot arrays requires knowledge of the mutual coupling relation as well as the self-impedance properties of a slot. Preliminary design equations are reported in this document.

WAVE NORMAL DIRECTIONS AND WAVE DISTRIBUTION FUNCTIONS FOR GROUND BASED TRANSMITTER SIGNALS OBSERVED ON GEOS 1
F. Lefeuvre, T. Neubert (Danish Research Inst.), and M. Parrot

Mar. 1981 75 p refs Sponsored by Danish Natural Science Research Council, CNRS and NSF
(CRPE-NT-99) Avail: NTIS HC A04/MF A01

Methods for determining the wave normal direction of electromagnetic wave fields observed in space from the simultaneous measurement of part or all of six wave components are assessed. Crossproduct method, Means's method, and maximum entropy method predictions are compared for 7 nearly successive 1 sec whistler mode pulses at 10.2 and 11.33 kHz observed onboard Geos 1. Signal to noise ratio, stationarity, degree of polarization, and polarization value are considered. For plane wave signals, signal to noise ratio is the key parameter for the crossproduct method. For highly polarized waves, polarization value deduced from a spectral matrix, is the key parameter for Means's method and the maximum entropy method. Wave type does not greatly influence results. Methods based on the spectral matrix are subject to estimation errors, but must be used if the electromagnetic field is of the plane wave type and the signal to noise ratio is high. Author (ESA)

ANALOGUE SAR SIGNAL PROCESSING: BREADBOARD DESIGN, IMPLEMENTATION, EVALUATION AND COMPONENT SPECIFICATION Final Report
K. M. Harvey, M. A. B. Hugues, C. Lambert, D. W. Sergeant, and D. W. Cruse Paris ESA Mar. 1981 158 p refs
(Contract ESA-3400/77/NL-HP(SC))
(ESA-CR(P)-1463; Rept-3976-ISSUE-1) Avail: NTIS HC A08/MF A01

The architecture, design and implementation of prefilter/subaperture filter and azimuth correlator breadboards of an onboard satellite SAR system are described. The signal generation and output data logging units used in tests are presented. The prefilter frequency response was tested by passing sinusoidal signals of varying frequency through the filter. A linearity test and a simulated point target chirp signal test were performed. The azimuth correlator was tested using a point target, a ramp, and a hole (zero reflectivity block in the center of a reflective background). Results show that charge coupled devices (CCD) are suitable for satellite applications, but given the advent of technologies, such as switched capacitor filters, a mixed approach (with CCD used only for imaging and programmable transversal filters) is advocated. STUDY OF SYNTHETIC APERTURE RADAR IN 2D - 2FS OPERATION OVER THE OCEAN Final Report
Paris ESA 5 Mar. 1981 25 p
(Contract ESA-4586/81/F-DD(SC))
(ESA-CR(P)-1475) Avail: NTIS HC A02/MF A01

Synthetic aperture radar operation (imaging mode) for the European Remote Sensing program is considered. The 2D - 2FS function consists in operating in a low power mode (100 W RF) for 1.5 sec every 15 sec in order to image patches on the sea surface of 5 km by 5 km every 100 km, with the 5 km squares in the center of the beam. The data stream needs to be buffered such that a continuous (300 kbit/sec) data stream is delivered. The impact of such a mode on hardware, especially in terms of mass and power consumption, was studied. Results show that the 2D - 2FS option requires minor changes. One additional dispersive line and one additional box, containing the added hardware for data handling, are necessary. This represents 7 kg more (with redundancy) for payload. The average power consumption in wave mode becomes 150 W

THE INFLUENCE OF THE ATMOSPHERE ON MICROWAVE RADIOMETRIC MEASUREMENTS IN THE 10 GHz TO 400 GHz FREQUENCY RANGE
Juergen Preissner Sep. 1981 52 p refs Transl. into ENGLISH of "Einfluss der Atmosphaere auf mikrowellenradiometrische Messungen im Frequenzbereich von 10 GHz bis 400 GHz" Rept. DFVLR-Mitt-80-16 Oberpfaffenhofen, West Germany, Sep. 1980 54 p
(ESA-TT-706; DFVLR-Mitt-80-16) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 11.30

The influence of the atmosphere on the brightness temperature of ground based objects, the reflectivities of which are known, is discussed. Attenuation caused by atmospheric gases and hydrometeors (rain, fog, clouds, snow) is described in detail. Given this attenuation, a computer program for the radiometric transfer equation was compiled. The possibility of determining the brightness temperature for any object on the ground and for any position of the sensor is shown. The brightness temperature was computed for 38 different frequencies in the range of 10 GHz to 400 GHz, for two viewing angles (zero and 60 deg), for six different heights of the sensor between 100 and 8000 m, for 19 different weather conditions, and for 41 different reflectivities of objects. The results are presented as diagrams. Author (ESA)

ON THE QUASI-TEM MODES IN GENERAL MULTICONDUCTOR TRANSMISSION LINES
Ismo V. Lindell 1980 14 p refs
(Rept-S-118; ISBN-951-752-076-X)
HC A02/MF A01 Avail: NTIS

The general inhomogenous shielded N-conductor transmission line is considered and several properties for the quasi-TEM modes were derived. The concept of quasi-TEM was deduced through an asymptotic series expansion of the fields. Conditions for the propagation constant and for the construction of the field are presented. The problem is shown to be reduced to two static two-dimensional boundary value problems. The concepts of propagating modes and impedance modes were introduced and shown not to be the same in the general case. The special cases of propagating impedance modes are discussed and shown to exist under certain symmetry conditions of the multiconductor line.

ASYMPTOTIC HIGH FREQUENCY MODES OF HOMOGENEOUS WAVEGUIDE STRUCTURES WITH IMPEDANCE BOUNDARIES
Ismo V. Lindell 1980 21 p refs
(Rept-S-120; ISBN-951-752-182-0)
HC A02/MF A01 Avail: NTIS

Homogeneous waveguides with both isotropic and anisotropic impedance boundaries were considered. Asymptotic high frequency mode properties were derived systematically. Several expressions showing the orthogonality properties of the asymptotic high frequency fields were deduced and duality transformations satisfying certain requirements were considered. Self-dual solutions corresponding to the two duality transformations are demonstrated and stationary functionals are constructed. An explicit formula for the calculation of the asymptotic attenuation coefficient for the general waveguide is given, isotropic and anisotropic boundaries being considered separately. Attenuation properties of a corrugated waveguide are used as an example.

BACKGROUND VARIATIONS IN MILLIMETER WAVE TELESCOPES DUE TO THE RADOME STRUCTURE
Martty Tiuri and Seppo Urpo 14 Aug. 1980 8 p Presented at URSI Symp. on Millimeter Wave Technol., Grenoble, France, 1980
(Rept-S-121; ISBN-951-752-183-9)
HC A02/MF A01 Avail: NTIS

The difference between measured and theoretical standard deviations of atmospheric fluctuations in radome covered telescopes used in dual beam radio source flux measurements is discussed. The main reason for this increased deviation is shown to be background noise from the telescope surroundings, which is reflected from the radome frame. A so-called synchronous tracking method is introduced for eliminating the effect of the background. A higher tapering of the feed horn is possible, but lowers the total efficiency of the telescope. HC A05/MF A01 Avail: NTIS

A program which tests the suitability of frequencies above 10 GHz for telecommunications is described. Atmospheric and climatic effects are studied. Output is unmodulated CW on seven frequencies, received simultaneously at one site. In 4 cases the intensities of the horizontally and vertically polarized components are recorded separately, giving 11 receiver channels. One single and one dual polarization antenna are used. The tests run for three years. No permanent damage should result from operation at ambient indoor temperatures > 50 C; 100% humidity; and AC voltage variation from 0% to 120% of nominal. No results are available.

SPECTRUM RESOURCE ASSESSMENT IN THE 2300-2450 MHz BAND
Robert T. Watson Sep. 1981 70 p refs
(PB82-115452; NTIA/Rept-81-78)
HC A04/MF A01 CSCL 17B Avail: NTIS

Spectrum resource assessment of the 2300-2450 MHz band is presented. Information rules and allocations, technical standards, frequency assignments, system characteristics and deployment, and an evaluation of applicable compatibility analyses are included. Present spectrum management techniques and associated problems and issues were identified by considering the interaction of the various systems for the allocated services. Recommendations were provided to exclude the amateur service and high power airborne radars from the 2310-2390 MHz band to assure compatibility with telemetry systems. Continuing study of the proposed Satellite Power System was also recommended. GRA

Flight control-related apparatus for damping operator induced oscillations of a controlled system responding to an operator controlled signal is described. The device utilizes a lag-lead filter for frequency and amplitude estimation of the control input, and a rectification and smoothing filter for producing a signal proportional to the absolute value of the frequency and amplitude estimate for use in suppression of the control system output signal. In one embodiment, this is accomplished by computing a correction signal in a correction generating section. In a second embodiment, a second rectification and smoothing filter produces a signal proportional to the absolute value of the controlled input signal. A ratio of the outputs of the first and second rectification and smoothing filters is then used in a generator to generate a gain factor k sub q for the control system to reduce the gain of the output signal of the control system, thereby to provide a damped control output signal without rate limiting the controlled element.

A dc-to-dc converter employs four transistor switches in a bridge to chop dc power from a source, and a voltage multiplying diode rectifying ladder network to rectify and filter the chopped dc power for delivery to a load. The bridge switches are cross coupled in order for diagonally opposite pairs to turn on and off together using RC networks for the cross coupling to achieve the mode of operation of a free running multivibrator, and the diode rectifying ladder is configured to operate in a push-pull mode driven from opposite sides of the multivibrator outputs of the ridge switches. The four transistor switches provide a square-wave output voltage which as a peak-to-peak amplitude that is twice the input dc voltage, and is thus useful as a dc-to-ac inverter.

SINGLE PHASE PERMANENT MAGNET SYNCHRONOUS MOTORS Ph.D. Thesis

William Urban Borger 1981 259 p refs
Avail: Univ. Microfilms Order No. 8127849

A generalized technique was developed which permits simulation of unsymmetrical machinery. The technique allows for unbalanced stator voltages, with artibrary displacement angles, independent phase parameters, machine resistances which are functions of frequency, switching of phase voltages (opening and closing) as required and switching of starting circuits as functions of motor rpm. A 1-phase induction machine was studied in detail. Synchronization was studied for a 2-phase permanent-magnet motor running on 1 phase. Synchronization for this same motor was also studied assuming load connection via a spring type coupling. In addition to synchronization studies, a minor effort was undertaken to determine machine behavior during load application and removal. The machine studied in the synchronization effort was also analyzed in the load application/removal studies. Dissert. Abstr.

FABRICATION AND CHARACTERIZATION OF OHMIC CONTACTS MADE WITH GOLD ON HEAVILY TIN DOPED N TYPE SURFACE LAYERS IN GALLIUM ARSENIDE Ph.D. Thesis

Timothy Lee Dester 1981 212 p
Avail: Univ. Microfilms Order No. 8128986

The fabrication of non-alloyed, ohmic Au-GaAs contacts was studied. Experimental data on contact resistivity and current-voltage response was compared with theoretical predictions to determine the applicability of the tunneling Schottky barrier model to the analysis of ohmic contacts. Non-alloyed, tunneling contacts were fabricated by evaporating Au onto an n-type layer with a high dopant surface concentration made by diffusing Sn into a GaAs wafer. The value of dopant surface concentration was determined using an Irvin curve and a measurement of diffused layer resistivity. Schottky barrier height was determined from the current-voltage response of the contact. Values of surface concentration and barrier height were used to calculate theoretical values of contact resistivity to which experimental data was compared. It was found that the Schottky barrier model incorporating electron tunneling can accurately characterize non-alloyed contact performance implying that tunneling responsible for contact ohmicity. A METHOD OF MODELING MULTIRATE TWO-DIMENSIONAL RECURSIVE DIGITAL FILTERS Ph.D. Thesis

Albert Peter Gerheim 1981 74 p
Avail: Univ. Microfilms Order No. 8126306

A method of modeling two dimensional sampled data systems with two sampling rates in each dimension is presented and applied to the problem of synthesizing two dimensional velocity filters using one dimensional prototypes and multirate concepts. The modeling method includes the replacement of scalar z-transforms of signals by vectors of polynomials, and the replacement of scalar z-transforms of impulse responses by matrices of polynomials. The synthesis of velocity filters is accomplished through the use of coordinate transformations in the z-transform domain which skew the omega (sub 1)-omega (sub 2) axes on the unit bidisc. The filters synthesized using these methods operate at sampling rates higher than the input and output data rates. The process of interpolating the input to accommodate the increase in sampling rates is analyzed in the frequency domain. This overall methodology is applied to the synthesis of fan filters of arbitrary order. Simple synthesis and realization methods are given. Dissert. Abstr.

SILICON MESFETS Ph.D. Thesis

Cornelis Dietwin Hartgring 1981 175 p
Avail: Univ. Microfilms Order No. 8200129

The potential of silicon metal-semiconductor field effect transistors (MESFETs) as a high-speed low-power integrated circuit technology is investigated. The device physics of submicron MESFETs and the modeling of their characteristics is emphasized. Two device models are derived, one of which was implemented in the integrated circuit simulation program SPICE2 and is now publicly available. The circuit techniques in the MESFET technology are investigated by means of SPICE2 simulations and experimental divide-by-two and ring oscillator circuit performances. The optimum circuit techniques are applied in the design of some LSI circuits: a 1 x 1K bit static shift register and parallel multipliers (8 x 8 bit and 10 x 10 bit). Their experimental and simulated performances are presented. The silicon MESFET technology is compared to the MOSFET and bipolar technologies for both present device dimensions and scaled-down ones. Dissert. Abstr.

PERFORMANCE OF FIR ADAPTIVE FILTERS USING RECURSIVE ALGORITHMS Ph.D. Thesis

Michael Latham Honig 1981 357 p
Avail: Univ. Microfilms Order No. 8200139

Adaptive digital filters used for speech and data processing are investigated. The algorithms use either a least mean square recursively in time. Only the all-zero transversal and lattice filter structures are considered. A geometric or Hilbert space formalism is used to derive the LMS lattice, LS lattice, and 'Fast' Kalman algorithms in a cohesive manner. Convergence properties of the LMS adaptive lattice filter are discussed. A deterministic model for multistage convergence is described which gives filter coefficient mean-values an output mean squared error as functions of time. The model is then extended to the LMS and LS lattice joint process estimators and to the 'Fast' Kalman algorithm. In each case calculated curves obtained from the model are compared with simulation results. The performance of each adaptive predictor in the context of adaptive differential pulse code modulation of speech is compared. Dissert. Abstr.

CHARGE CIRCUITS FOR ANALOG LSI Ph.D. Thesis
Robert Howard McCharles 1981 129 p
Avail: Univ. Microfilms Order No. 8200198

Large Scale Integration (LSI) reduced the cost of digital circuits, but had less effect on the cost analog circuits. A charge circuit, a clocked analog circuit which reduces these difficulties is discussed. A clock is used as a reference for time-dependent functions. A clocked analog inverter is a charge circuit similar to a digital gate. Any analog function can be implemented using analog storage and clocked analog inverters. Charge circuits were designed from algorithmic representations of desired functions allowing the use of self-correcting algorithms for improved accuracy. This reduced the need for trimming. A suitable technology for implementing charge circuits is MOS technology. A promising application is in analog-to-digital converters using recursive implementations. Error correcting algorithms can be applied to improve the accuracy of recursive (or cyclic) analog-to-digital converters. It is possible to construct such a converter as CMOS technology with greater than 12-bits of accuracy and a conversion time of less than 200 microseconds. Such a converter would have an active die area of 3 mm. square or less using present-day layout rules.

A UNIFIED CAD MODEL FOR MOSFETS Ph.D. Thesis
Sally Liu 1981 262 p
Avail: Univ. Microfilms Order No. 8200190

The operation of metal oxide semiconductor field effect transistors was analyzed, emphasizing the effects of quantum-mechanical statistics, the joining of strong- and weak-inversion regions and the modeling of small-geometry devices. Numerical evaluation of the drain current, channel conductance etc., based upon quantum-mechanical statistics, demonstrates that quantum-mechanical statistics alone do not result in a significant deviation from the classical prediction of these device characteristics within practical operational voltage ranges. Program TWIST was developed to simulate the characteristics of weak inversion and weak-injection punchthrough by solving the two-dimensional Poisson equation. The results of two-dimensional simulations establish the relationship between the drain-induced lowering of the surface barrier and the punchthrough. The onset voltage of the punchthrough is derived from a quasi one-dimensional Poisson equation. To model small geometry devices, a semi-empirical model, MOS3, was developed and installed into the circuit simulation program SPICE2.G.

JUMP BEHAVIOR OF CIRCUITS AND SYSTEMS Ph.D. Thesis
Sosale Shankara Sastry 1981 115 p
Avail: Univ. Microfilms Order No. 8200262

With particular reference to circuits, the jump behavior, that is, the seemingly discontinuous change in state of systems driven by constrained (or implicitly defined) dynamics is studied, i.e., x = f(x,y),0 = g(x,y). To be specific, dynamics of a circuit are defined implicitly by specifying the velocities (time derivatives) of capacitor voltages and inductor currents as well as the nonlinear resistive and Kirchhoff constraints that the branch voltages and currents must satisfy. These constraints represent a constraint manifold over the base space of capacitor voltages and inductor currents. The process of integrating the circuit dynamics to obtain the transient response of the circuit consists of 'lifting' the specified velocities to a vector field on the constraint manifold ('lifting' is the inverse operation of projecting). Lifting may not, however, be possible at points of singularity of the projection map, from the constraint manifold to the base space. A way of resolving these singularities, consistent with the interpretation that the constraint manifold is a degeneration of very fast or singularly perturbed dynamics is proposed.

A DESIGN FOR A 32-CHANNEL MULTIPLEXER
P. F. Martinson 26 Jan. 1981 35 p refs
(RAE-TM-RAD-NAV-145; BR77700) Copyright. Avail: Issuing Activity

A time scan analog system multiplexer used for recording data during flight trials of unmanned aircraft navigation sensors is described. The 32 inputs are buffered, then multiplexed in groups of 8 onto 4 lines. These four are multiplexed onto one line and the signal passes through the output buffer to the recorder. Aircraft attitude, heading and height are recorded. Signals from a camera and a kinetheodolite tracking system are synchronized. Operating conditions were simulated using a helicopter. Noise and drift are due to the recorder. The multiplexer copes well with signals of several kHz bandwidth (raw data) and signals of a few Hz bandwidth (processed data, test signals). It can be used with any multitrack tape recorder having an FM recording format on at least two tracks. It can be converted for use in a digital telemetry system.

NUMERICAL SIMULATION OF DIODE RECTIFIER BRIDGES: APPLICATION OF A NEW METHOD TO THE BRUSHLESS EXCITATION SYSTEM
L. Baes, M. S. Garrido, and F. Labrique Oct. 1981 14 p refs
Transl. into ENGLISH from "Simulation numerique des ponts redresseurs a diodes application d'une methode originale au systeme d'excitation brushless", Can. Commun. and Power Conf., Montreal, 1976 p 269-272 Conf. held in Montreal, Quebec, 20-22 Oct. 1976
(DRIC-T-6478; BR80788) Copyright. Avail: Issuing Activity

A diode bridge rectifier simulation method is presented which unites the advantages of using a single system of nonlinear differential equations with the description of the source and load solely by their conditional variables. The bridge is compared to a network of nonlinear resistors whose values, always finite, are deduced from the values of the sole conditional variables of the source and the load. A simple numerical integration program suitable for analyzing sudden transients in which the source impedances play an important part is derived. It performs well when applied to the asynchronous operation of a brushless excitation alternator.

A GENERAL PURPOSE INTERFACE BUS (GPIB)
A. M. Benson 19 Jun. 1981 25 p refs
(RAE-TM-RAD-NAV-168; BR79940) Copyright. Avail: Issuing Activity

The use of the Fairchild 96LS488 integrated circuit in the design of a GPIB interface for use with a desktop computer is illustrated. Circuits which convert GPIB data into parallel binary coded decimal data and provide facility for hardware interrupts are described. The interface transmits and receives data. Digital data are sent to a digital to analog converter. The analog output was amplified by a control unit and used to drive a rate table as part of a test facility for ring laser gyroscopes. A standard interface card is attached to the sending computer and the converter. The interface is easy to install and operates efficiently.

SECONDARY ELECTRON EMISSION FROM A CHARGED DIELECTRIC IN THE PRESENCE OF NORMAL AND OBLIQUE ELECTRIC FIELDS M.S. Thesis
Bahram Javidi Feb. 1982 110 p refs
(Grant NsG-3166)

(NASA-CR-168558) Avail: NTIS HC A06/MF A01 CSCL 09C

The secondary electron emission coefficient was obtained for a FEP-Teflon dielectric charged with monoenergetic electrons normally incident upon the surface of the specimen. Measurements of secondary emission coefficient were done for normal and oblique incidence with different primary beam energies in the presence of normal and oblique electric fields. A collimated probing beam was directed to different points on the surface of the specimen and the released or accumulated charge was monitored using an electrometer. The measured data for different probing beam energies, different impact points and different angles of incidence were plotted vs. impact energy and impact point. Data analyzed by computer simulations to find the potential distribution on the surface of the specimen and the electric field around it, is presented and discussed. M.D.K.

MAPPING OF ELECTRICAL POTENTIAL DISTRIBUTIONS WITH CHARGED PARTICLE BEAMS Final Report, Nov. 1977 - Feb. 1982

James W. Robinson Feb. 1982 61 p refs
(Grant NsG-3166)
(NASA-CR-168556) Avail: NTIS HC A04/MF A01 CSCL 09C

Methods for measuring electrostatic potentials on and near dielectric surfaces charged to several kilovolts are studied. Secondary emission from those charged dielectrics is measured. Candidates for potential measurement include the induced charge, from which potential is calculated; the trajectory endpoints of either high or low energy particles traversing the region near the surface; trajectory impact on the surface; and creating ions at points of interest near the surface. Some of the methods require computer simulations and iterative calculation if potential maps are to be generated. Several approaches are described and compared. A method using a half-cylinder as a test chamber and low-energy probing beams is adapted for the measurement of seconary emission. N.W.

SMALL SIGNAL DESIGN OF A DIELECTRIC RESONATOR STABILIZED OSCILLATOR

Paulo Mello Marshall and Carlos Eduardo Santana Dec. 1981 14 p refs Submitted for publication
(INPE-2285-PRE/061) Avail: NTIS HC A02/MF A01

The design of a dielectric resonator stabilized oscillator based on small signal scattering parameters is presented. A cylindrical dielectric resonator, magnetically coupled to a terminated microstrip line, is the principal element of the high Q tuning network connected to the input port of a feedback unstabilized transistor. Advantages of this configuration over the output band-stop resonator oscillator are the inhibition of the frequency tuning hysteresis phenomena and the larger tuning range. Accuracy of the design is verified by the performance of a 5430 MHz test oscillator. Tuning range, spectrum, and temperature characteristics are presented and discussed. Author

STABILIZED MICROWAVE OSCILLATOR FOR A DIELECTRIC RESONATOR [OSCILADOR DE MICROONDAS ESTABILIZADO POR UM RESSOADOR DIELECTRICO]

Paulo Mello Marshall and Carlos Eduardo Santana Jun. 1981 39 p refs IN PORTUGUESE; ENGLISH abstract Presented at the 33rd Ann. Meeting of SBPC, Salvador, Bahia, Brazil, 8-15 Jul. 1981
(INPE-2123-RPE/347) Avail: NTIS HC A03/MF A01

The design and construction details of a microwave oscillator stabilized by a cylindrical dielectric resonator are presented. The resonator is coupled with the output port of a bipolar transistor and acts as a band-stop filter. The design is based on the experimental evaluation of the coupling between the resonator and a microstrip line, and on the scattering parameters specified for the bipolar transistor. At 3200 MHz the oscillator shows low FM noise and no spurious oscillations. The oscillating frequency has a 50 MHz mechanical tuning band and a temperature stability of about 9 ppm/C in the range 25-50 C. These characteristics together with the ease of mechanical constuction, fit this type of oscillator for application as a local oscillator in a great variety of microwave receivers. Author

A number of test setups and procedures are described for measuring and simulating the current and voltage conditions prevailing in short circuit breakers designed to interrupt short circuit currents from 80 to 100 kA. A synthetic test circuit was successfully developed, using the principles of both voltage and current injection. A capacitance current injection procedure allows for the establishment of the influence of iron in the magnetic circuit on the prospective transient recovery voltage of the breaker. Methods for measuring the post-arc current are indicated, and developed meshed grid and tube shunts are described. Synthetic test circuits are presented which are suitable for testing the capacitive switching capabilities of breakers. Author (ESA)

This specification covers the general requirements for the design and construction of ground electronic equipment. This specification establishes the ambient conditions within which equipment must operate satisfactorily and reliably; the general material, the process for selection and application of parts, and the tests for ground electronic equipment. Requirements applicable to individual equipments shall be as specified in the individual equipment specifications.

CHRONOAMPEROMETRIC TRANSIENTS AT THE STATIONARY DISK MICROELECTRODE
Tadeusz Hepel and Janet Osteryoung 30 Nov. 1981 37 p refs Submitted for publication
(Contract N00014-79-C-0682; NR Proj. 056-715)
(AD-A108567; TR-7) Avail: NTIS HC A03/MF A01 CSCL 09/1

Chronoamperometric transients for diffusion controlled reactions at stationary platinum and gold microelectrodes have been examined. The results are compared with those predicted theoretically for hemispherical electrodes and for disk electrodes. The hemispherical model was found to describe the current-time transients only qualitatively, while excellent agreement was obtained between the theory for a stationary disk and data for the hexacyanoferrate (II)/(III) redox reaction. Equations for mass transport to a stationary disk electrode derived earlier form the basis for graphical methods of analysis of a single current-time transient which permit the simultaneous determination of two of the three parameters electrode radius, diffusion coefficient, and concentration. A plot of I vs 1/sq. rt. t has the advantage of simplicity. A logarithmetic analysis (log I-log t) requires data over a greater time range but offers advantages in characterizing electrode geometry. The effects of surface irregularities and electrode sphericity are also discussed.

SUPERCONDUCTING ELECTRONICS Final Technical Report, 1 Jul. - 31 Dec. 1980
Bascom S. Deaver, Jr. and Robert J. Mattauch 1981 20 p refs
(Contract N00014-77-C-0440)
(AD-A108402) Avail: NTIS HC A02/MF A01 CSCL 20/3

The objectives of the research have been (1) to design, fabricate, and test Josephson mixers for use at frequencies greater than 100 GHz, (2) to fabricate and characterize various types of microbridges, particularly ones on semiconductor substrates which may exhibit measurable interaction with the substrate and (3) to measure the microwave properties of some NbN SQUIDs. Progress made on all of these topics is summarized and references to publications reporting the results in more detail are presented.

HC A04/MF A01 CSCL 09/5

The main objective of the Lincoln Restructurable Very Large Scale Integration (RVLSI) Program is to develop methodologies for designing whole-wafer-scale systems with complexities approaching a million gates. In our approach, we envisage a modular style of architecture comprising an array of cells embedded in a regular interconnection matrix. Ideally, the cells should consist of only a few basic types. The interconnect matrix is a fixed pattern of metal lines augmented by a complement of programmable switches or links. Conceptually, the links could be either volatile or nonvolatile. They could be of an electronic nature such as a transistor switch, or could be permanently programmed through some mechanism such as a laser. The present main thrust of the current RVLSI Program is toward laser-formed interconnect. The link concept offers the potential for a highly flexible, restructurable type of interconnect technology which could be exploited in a variety of ways. For example, logical cells or subsystems found to be faulty at wafer probe time could be permanently excised from the rest of the wafer. The flexible interconnect could also be used to 'jump around' faulty logic and tie in redundant cells judiciously scattered around the wafer for this purpose. Also, the interconnect could be tailored to a specific application in order to minimize electrical degradations and performance penalties caused by unused wiring. GRA

HC A03/MF A01 CSCL 09/5

A method for simulating the dynamic behavior of pulsed IMPATT oscillators using a quasi-static approximation is presented. The method used to characterize the IMPATT diode is explained. A particular circuit model is used which models the cylindrical cavity power combining circuit. The overall device-circuit interaction technique is outlined. Simulation results for a high-low, single-drift X-band GaAs IMPATT are presented. The method presented here can be employed for any type of IMPATT device. The pulsed oscillator properties of double-drift IMPATT diode structures are presently being investigated. Author (GRA)

STRUCTURE OF A MULTIBEAM ADAPTIVE SPACE-TIME PROCESSOR

L. H. Sibul and Guy R. L. Sohie 30 Jul. 1981 19 p refs
(Contract N00024-79-C-6043)
(AD-A108352; ARL/PSU/TM-81-156) Avail: NTIS HC A02/MF A01 CSCL 09/3

It is shown that an adaptive multi-input, multi-output space-time processor (beamformer and filter) consists of a multi-input, multi-output adaptive processor and a nonadaptive beamsteering operator. The adaptive processor is determined by the spatial and temporal properties of the noise field; whereas, the beamsteering operator is determined a priori by the desired beamsteering directions. In this structure, the multichannel adaptive processor is common to all the desired beamsteering directions. Author (GRA)

This annual report presents a summary of the scientific progress and accomplishments on research projects funded by the Joint Services Electronics Program (JSEP) for the contract period from 1 April 1980 through 31 March 1981. It does not contain information regarding accomplishments on research projects funded in other ways. The Joint Services Electronics Program at the Polytechnic is the core of interdisciplinary research in electronics encompassing programs in the Departments of Electrical Engineering, Physics and Chemistry under the aegis of the Microwave Research Institute. The research encompassed by this program is grouped under three broad categories: Electromagnetics, Solid State and Information Electronics. The detailed projects (work units) comprising the complete program are listed in the Table of Contents. In addition to the progress, we include for each of the work units the publications during the past year resulting from the research, and some of the recent interactions with the DOD or industry or other academic institutions. At the front of this Annual Report we present our Report on Significant Scientific Accomplishments, and at the end we append a comprehensive list of all the journal publications and conference proceedings during the period from August 1, 1980 to the present, arranged alphabetically according to the name of the first author. OPERATING EXPERIENCE WITH THE HARWELL THERMO-MECHANICAL GENERATORS

E. H. Cooke-Yarborough Jun. 1980 14 p refs
(AERE-R-9829) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries also available from HMSO, £2

The Stirling-cycle thermomechanical generator (TMG) provides small amounts of electrical power continuously over long periods, while requiring much less fuel than other power sources running from hydrocarbon fuel or radioisotopes. Two of these 25 watt generators, fuelled by propane, have been used to power the UK National Buoy on two successive missions. A total of more than three years experience at sea has now been accumulated. In addition, a 60 watt version has provided the power for a major lighthouse for more than a year. An early development version of the Thermo-mechanical Generator, adapted to run from the heat of a radioisotope source, was loaded with strontium 90 titanate in October 1974 and has run continuously in the laboratory ever since. The improvements and changes found necessary in the course of 90,000 generator-hours of running time are described, and the improvements in operational performance and reliability which have resulted are outlined. TESTS CONCERNING TECHNOLOGICAL PROBLEMS WITH

CHARGE TRANSFER ELECTRON MULTIPLIERS Final Report **[ESSAIS CONCERNANT LES PROBLEMES TECHNOLOGIQUES LIES AUX DISPOSITIFS INTENSIFICATEURS A TRANSFERT DE CHARGE]**
M. Blamoutier and S. Veron Paris ESA 24 Nov. 1980 29 p refs In FRENCH
(Contract ESTEC-2865/76/NL-AK)
(TDI/1.1851/80; Rept-2388-I; ESA-CR(P)-1464) Avail: NTIS HC A03/MF A01

Diverse design problems of an electron multiplier tube with video output were analyzed. A structure where a charge transfer matrix under bombardment replaces the output screen was considered. The matrices THX 1115 and 1130 were developed. Thin structure fabrication techniques were explored. Tube and matrix support mock-ups were built and tested. The mechanical strength of the structure remains problematic. The matrix is shown compatible with its environment. However an operational engineering model was not obtained, preventing determination of performance characteristics. Author (ESA)

EVALUATION OF LINEAR ARRAYS OF INFRARED DETECTORS FOR THE 1.5 TO 5 MICRON RANGE
C. Corsi, G. Marangoni, S. deVito, and C. Damato Paris ESA Sep. 1980 79 p
(Contract ESTEC-3979/79/NL-PP(SC))
(RT-80/198; ESA-CR(P)-1473) Avail: NTIS HC A05/MF A01

Linear and two-dimensional IR arrays based on ion beam technology and compatible with integrated circuit (IC) technology were tested. Outstanding optoelectronic characteristics are achieved. These characteristics permit analog/digital conversion to the first level of the reading subunit, overcoming the problem of ultralow noise preamplifiers connected to each individual sensing element. Further improvements include capability of manufacturing IR detector arrays with no blind element and no dark space, and compatibility with silicon IC technology and multilayer structure capability. Research shows arrays to be suitable for pushbroom satellite application. Author (ESA)

SF6 PLASTIC FILM INSULATED OUTDOOR BUSHING FOR METALCLAD SWITCHGEAR OPERATING AT SYSTEM VOLTAGES OF 420 kV AND ABOVE Final Report
Hermann Dietz Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 64 p refs In GERMAN and ENGLISH
(Contract BMFT-ET-4081-A)
(BMFT-FB-T-81-172; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13,50

In replacement of conventional oil-paper bushings, a type of SF6 insulated bushing with polypropylene plastic film dielectricum was developed for outdoor operation of metalclad switchgear. Such bushings have the advantage of the conformity of the insulation with that of the matching switchgear and of the nonflammability of the SF6 gas. The choice of the plastic film, the winding technique, the thermal and dielectrical test program, and the high voltage long-term test program are described. Series production of a 420 kV bushing is under way and research specimens for 525 kV were successfully tested. Author (ESA)

MIXING WITH A SQUID AT MILLIMETER WAVES
Pekka Somervuo 1979 15 p refs
(Rept-S-117; ISBN-951-752-075-1) Avail: NTIS HC A02/MF A01

The construction of a millimeter wave mixer using a SQUID type point contact Josephson junction is described and a simplified analysis of the mixing is given. Experimental results showed that at 33 GHz the measured conversion loss with external pumping was 8 dB using an intermediate frequency (IF) of 900 MHz. With fourth harmonic pumping a conversion gain of 10 dB was achieved at 35 GHz. In all experiments strong noise levels were measured at IF. In order to improve noise properties a mixer construction based on magnetometer principles is proposed. Author (ESA)

THE CONFERENCE ON HIGH TEMPERATURE ELECTRONICS
D. J. Hamilton (LASL), J. B. McCormick, W. J. Kerwin, and J. A. Narud 1981 134 p refs Conf. presented at Tucson, Ariz., 25-27 Mar. 1981; sponsored by NASA, IEEE Industrial Electronics and Control Instrumentation Council, IEEE Solid State Circuits Council, DOE, Nuclear Regulatory Commission, NSF and LASL
(NASA-CR-168505; PB82-114414; NSF/ECS-81007; IEEE-81CH1658-4) Avail: NTIS HC A07/MF A01 CSCL 09C

The status of and directions for high temperature electronics research and development were evaluated. Major objectives were to (1) identify common user needs; (2) put into perspective the directions for future work; and (3) address the problem of bringing to practical fruition the results of these efforts. More than half of the presentations dealt with materials and devices, rather than circuits and systems. Conference session titles and an example of a paper presented in each session are (1) User requirements: High temperature electronics applications in space explorations; (2) Devices: Passive components for high temperature operation; (3) Circuits and systems: Process characteristics and design methods for a 300 degree QUAD or AMP; and (4) Packaging: Presently available energy supply for high temperature environment. COAGULATION AND DEPOSITION OF ULTRAFINE AEROSOLS IN TURBULENT PIPE FLOW Ph.D. Thesis
John Erwin Brockmann 1981 246 p
Avail: Univ. Microfilms Order No. 8125936

The simultaneous coagulation and diffusion of ultrafine particles (diameter < 0.02 micrometer) in turbulent pipe flow was studied with emphasis on the aerosol measuring instruments used. Calibration data for the TSI continuous flow condensation nucleus counter are given. A diffusion battery constructed of layers of metal screens is described as well as a sample extraction and dilution system (SEDS) designed to sample a high concentration of ultrafine particles with low characterized particle losses and minimal change in the size distribution due to coagulation. A simplified model for simultaneous Brownian coagulation and diffusional deposition of a free molecule aerosol in turbulent tube flow is presented. The model specifically addresses the case where the effects of both coagulation and deposition are important and the simplifying assumption of pure coagulation or pure deposition cannot be made. Dissert. Abstr.

N82-18536 Colorado State Univ., Fort Collins.
A TIME DEPENDENT FLOW MODEL FOR THE INNER REGION OF A TURBULENT BOUNDARY LAYER Ph.D. Thesis
Ho-Chen Chien 1981 154 p
Avail: Univ. Microfilms Order No. 8126422

Response of the flow variables to external driving forces is nonlinear for shear flows. For the turbulent boundary layer case, surface shear stress fluctuation of magnitude as great as the mean value are observed. A model which incorporates a discrete time dependent solution for the inner region of the turbulent boundary layer is proposed. The model requires stochastic averaging of the time dependent solution to account for the random aspect of the flow. The physical model for the flow near the surface is based on the bursting cycle observed in the inner region of a turbulent boundary layer. Localized pressure gradients created in the valleys of the large scale structures of the outer region of the flow are assumed to be the origin of the bursting process. This model treats the sweep motion as an impulsively started flow over a flat plate. An averaging technique is demonstrated to predict the important features of the surface shear stress. Dissert. Abstr.

N82-18537 California Univ., Berkeley.

INSTRUMENTATION FOR IMAGING OF FLUID FLOW USING NUCLEAR MAGNETIC RESONANCE WITH AN EXAMPLE OF ONE-DIMENSIONAL FLOW IMAGING Ph.D. Thesis

Joel Libove 1981 145 p

Avail: Univ. Microfilms Order No. 8200185

A new method for producing one-dimensional images (projections) showing average flow velocities of fluids in pipes, using Nuclear Magnetic Resonance (NMR) is presented. Images of this type have potential applications in hydrodynamic studies of flow structures, and in studies of blood flow in the human body. The spin echo signals measure fluid velocity and obtain the spatial flow distribution. In the technique, different regions of the sample are irradiated in rapid succession. The result is a 'multiple echo' signal whose magnitude, over time, is the spatial profile of proton density, and whose phase at a given time indicates the average flow velocity at a given position. Special NMR apparatus which was designed and constructed for testing this technique is discussed in detail. Also, a theoretical analysis of the technique is presented, followed by experimental results showing a flow profile for a known arrangement of tubes of flowing water. Dissert. Abstr.

N82-18538 Minnesota Univ., Minneapolis.

THERMAL HYDRAULIC STABILITY OF FLOW IN PARALLEL CHANNELS Ph.D. Thesis

Hossein Pournourbakhsh 1981 225 p

Avail: Univ. Microfilms Order No. 8125997

The thermal hydraulic stability of flow in parallel channels is investigated. A numerical (finite difference) calculational program for analyzing both steady state and transient steam water flows in a heated channel with a prescribed axial heat flux is presented. The model is based on a one dimensional drift velocity formulation of the two phase flow conservation equations, including the effects of radial distribution of void and thermal nonequilibrium between the vapor and liquid phases. Attention is given to flow regimes so as to more properly define the use of available correlations for the constitutive equations. The analysis is extended to superheat regions. Heat effects due to tube walls are included in the analysis. Steady state as well as stability predictions are compared to available experimental results. Dissert. Abstr.

SOME RECENT DEVELOPMENTS IN AERONAUTICAL FLUID MECHANICS

E. G. Broadbent 6 Mar. 1981 36 p refs Presented at 23rd British Theoret. Mech. Colloq., Bradford, England, 6-9 Apr. 1981

(RAE-TM-Aero-1894; BR78251) Copyright. Avail: Issuing Activity

The state of the art in the calculation of the inviscid flow field of a wing at transonic speeds, the calculation of the viscous boundary layer (including the wake, interaction with shocks, and the treatment of high lift devices) and the application of vortex flows to the adoption of strakes was reviewed. The inclusion of shock coefficients and coordinate transformations increase transonic field calculation accuracy for inviscid flow, but shock equations remain extremely time consuming. Advances in boundary layer calculation include second order methods which allow for wall curvature, second order Reynolds stresses, and a pressure gradient normal to the wall. Navier-Stokes equation solving by time marching is successful for simple geometries. Analysis methods which include leading edge vortices are required in order to understand strake effects. BURGERS APPROXIMATION FOR TWO-DIMENSIONAL FLOW PAST AN ELLIPSE Progress Report, 26 May - 26 Nov. 1981

J. Mark Dorrepaal Feb. 1982 27 p refs

(Grant NAG1-197)

(NASA-CR-168552) Avail: NTIS HC A03/MF A01 CSCL 20D

A motivation is given for studying Burgers flow and a solution technique is outlined which works equally well for Oseen or Burgers flow past a circular cylinder. The separation behind the cylinder, the drag experienced by the cylinder, and asymptotic behavior far from the cylinder are described. It is shown that the predictions of Burgers flow near the cylinder provide a substantial improvement over those of Oseen flow. Finally, the equations of motion for Burgers flow past an ellipse are formulated and solved. A.R.H.

THERMAL RESISTANCE OF CONVECTIVELY COOLED PLATES WITH APPLIED HEAT FLUX AND INTERNAL HEAT GENERATION

Nellore Srinivasan Venkataraman, Humberto Pontes Cardoso, and Olavo Bueno deOliveiraFilho Dec. 1981 24 p refs Submitted for publication

(INPE-2291-PRE/066) Avail: NTIS HC A02/MF A01

The conductive heat transfer in a rectangular plate with internal heat generation, with one end convectively cooled and a part of the opposite end subjected to external heat flux, is considered. The remaining part of this end as well as the other two sides are thermally insulated. Both uniform and nonuniform internal heat generation are considered. For the case of uniform heat generation an analytical solution has been found, and for the nonuniform case a finite difference numerical solution is presented. The variation of the thermal resistance with Biot modulus, the plate geometry, the internal heat generation parameter and the type of profile of internal heat generation is discussed. Author

THERMAL RESISTANCE OF A CONVECTION COOLED FLAT PLATE WITH A NONUNIFORM APPLIED HEAT FLUX AND INTERNAL GENERATION OF CONSTANT HEAT [RESISTENCIA TERMICA DE UMA PLACA PLANA RESFRIADA POR CONVECCAO COM FLUXO DE CALOR APLICADO NAO-UNIFORME E GERACAO INTERNA DE CALOR CONSTANTE]

Nellore Srinivasan Venkataraman, Olavo Bueno DeOliveira Filho, and Humberto Pontes Cardoso Jun. 1981 27 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SPBC, Salvador, Brazil, 8-15 Jul. 1981

(INPE-2131-RPE/355) Avail: NTIS HC A03/MF A01

The two dimensional conductive heat transfer in a rectangular plate with constant internal heat generation and with two opposite sides insulated, the third subjected to convective cooling by a fluid at a constant temperature and a portion of the remaining end subjected to an arbitrary heat flux distribution is analyzed. This type of problem has applications in the design of solar collector plates, the mounting plates of electronic banks, in some heat exchangers, and in thermal control of satellites. It is observed that the nondimensional thermal resistance can be expressed as a function of the nondimensional plate thickness and contact width, the Biot number, and the ratio of the total internal heat generation to the total heat flux. As was expected, if the thermal resistance resulting from one-dimensional heat conduction is subtracted from the total thermal resistance, the resulting value will still be dependant on the internal heat generation. J.M.S.

SPECTRAL MODEL PREDICTIONS OF MEAN-SQUARE-SHEAR DISTORTION RATES Technical Report, 20 Nov. 1980 - 7 May 1981

Walt Grabowski and Fred C. Newman 7 May 1981 23 p refs

(Contracts N00014-81-C-0084; N00014-81-C-0075)

(AD-A108211; SAI-82-485-WA) Avail: NTIS HC A02/MF A01 CSCL 20/4

It is possible to use a simple shear spectral model to produce some estimates of the mean-square velocity difference over given values of delta z. The distortion of a fluid region (a wake cross section, say) of dimension L is clearly due to velocity differences over delta z equal to L and smaller. The behavior of velocity differences over delta z with a simple model for the shear spectral density function is explored. Author (GRA)

Current analytical studies regarding the laminar-to-turbulent boundary layer transition process, including relevant analysis of laminar separation, and analytical and experimental studies concerning parametric effects on transition pertinent to axial-flow turbomachine blade rows are reviewed. These include the effects of pressure gradient, freestream turbulence, surface roughness, heat transfer, and combined effects. Finally, the work of various authors who established data correlations for transition on axial-flow turbomachine blade rows is evaluated. Predictive equations and charts were presented as a reference guide for determining the transition region on blades. Additionally, equations for calculating transitional boundary layer growth are presented. Author (GRA)

HC A08/MF A01 CSCL 20/4

Pulsating flow of air in a straight smooth pipe was investigated experimentally. The period of forcing ranged from 0.5 sec to 5 sec which resulted in the change in the non-dimensional frequency parameter alpha = r sq root of w/nu of 4.5 to 15. The introduction of periodic surging had no effect on the time mean quantities. The present data was compared in detail with the theory of Uchida (1956) in the laminar flow regime. The time dependent components at the forcing frequency were presented by the radial distribution of amplitude and phase. An integral momentum equation in a time dependent flow requires a force triangle to be maintained at any instant. The triad of forces are: pressure, inertia and shear. All terms of the force balance equation were measured independently providing a good check of data. The measured turbulent characteristics of the flow, including the RMS values of the velocity fluctuations, Reynolds stress and short-time power spectra are dependent on the phase of the forced oscillations. The radial distribution of the phase angle of velocity is qualitatively different in laminar and turbulent flows. In order to explain this difference the concept of a relaxation time of the turbulent flow was employed. Transitional flow in a boundary layer is also briefly discussed. Author (GRA)

HC A04/MF A01 CSCL 20/4

The objective of this research effort is to construct a purely theoretical foundation for the phenomenon of turbulent heat transfer. In this first annual report, the current methodology of theoretical research is reexamined critically. The report outlines in three self-standing units (papers) the new theoretical viewpoint that turbulence is the result of inviscid flow buckling. This viewpoint leads to first examples of theoretical prediction of turbulence parameters, for instance, the transition to turbulence, the flapping motion of turbulent jets, the frequency of vortex shedding and the meandering and mixing mechanism of thermal plumes. A GENERAL COMPUTER PROGRAM FOR FLUID-FLOW, HEAT-TRANSFER AND CHEMICAL-REACTION PROCESSES
D. B. Spalding Sep. 1980 37 p refs Presented at Intern. FEM-Congr., Baden-Baden, West Germany, 17-18 Nov. 1980
(HTS/81/10) Avail: NTIS HC A03/MF A01

A code for parabolic, hyperbolic, or elliptical numerical integration is described. It consists of a series of closely linked computer codes and can be used to solve steady state problems or to simulate a transient process, e.g., a pipe break in a nuclear power plant. Finite domain equations are formulated in a fully implicit manner so that steady state problems can be solved expeditiously. The size of the time step in transient problems was determined by the speed of the physical events simulated. One, two, or three dimensions can be handled. Author (ESA)

HC A07/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 23,55

The velocity of the ram tube to make it accessible for production in pattern flows examining human circulation was investigated. A simplified theory of the function of the hydraulic ram was developed using the Navier-Stokes equation for a square rubbing component for one dimensional flows. The influence of the valve movement on the ram efficiency is evaluated. The difference between the significance of the influences on the ram model as opposed to the technical ram is discussed. AN INTEGRAL EQUATION FOR THE VELOCITY FIELD OF

IRROTATIONAL FLOWS AROUND BLUNT BODIES
Barbara Schmitt-vonSchubert Oct. 1981 28 p refs Transl. into ENGLISH from "Integralgleichung fuer das Geschwindigkeitsfeld drehungsfreier Stroemungen um stumpfe Koerper", Rept. DFVLR-FB-80-25 Goettingen, West Germany
(ESA-TT-702; DFVLR-FB-80-25) Avail: NTIS HC A01/MF A01; DFVLR, Cologne DM 7.30

An integral equation which characterizes the velocity of the stationary flow around blunt bodies is derived. The flow is assumed irrotational, i.e., only such discontinuity surfaces occur for which this assumption remains valid. The behavior of the integral equation at such a discontinuity surface is discussed. The solution of the equation is shown similar to the solution of a wall flow equation. Author (ESA)

REPORT ON THE EXPERIENCES WITH THE GAS COMPRESSION HEAT PUMP SYSTEM OF THE SCHOOL AND SPORTS CENTER AT ALTENKUNSTADT Final Report, Dec. 1980
Fritz Tscherter Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 109 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-175; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 23.10

Three years of operation of a 1200 kw natural gas boiler system supplemented by a 800 kw gas heat pump system are evaluated and the savings in primary energy are assessed. Setup, control system and measuring instrumentation are described. The proximity of a river allows an hybrid operation whereby 100% of the heat is produced by the gas powdered heat pump for any river temperature above 3 C whereas below that temperature the gas boiler takes over completely. Annual heat pump heating figures between 1.66 and 1.72 were obtained, thus yielding a saving in primary energy between 36% and 47%, in good agreement with the design values. The cost analysis shows that the savings thus achieved cover the operating costs specific to the heat pump. Author (ESA)

OPEN-CYCLE VAPOR COMPRESSION HEAT PUMP Annual Progress Report, 1980
Ravi Sakhuja and Frederick E. Becker 5 May 1981 54 p
(Contract GRI-5011-342-0094)
(PB82-110503; TE4224-243-81; GRI-80/0064) Avail: NTIS HC A04/MF A01 CSCL 13A

Recovery and upgrading of low-grade steam or waste heat sources offers a great potential of energy conservation. Thermo Electron is developing an open cycle vapor compression steam heat pump to meet this objective. The system utilizes excess low-pressure steam or that produced from an industrial excess heat source with a waste heat boiler and compresses this steam to the desired pressure level for process use. The compressor is driven by a prime mover such as a gas turbine, gas engine, etc. The prime mover exhaust heat also can be recovered to generate additional process steam. The fuel consumption of this system can be as low as 30 to 50 percent in comparison to a direct-fired boiler over the expected range of process conditions. Simple payback periods as low as one year can be achieved. GRA

APPLICATIONS OF MULTI-PINHOLE GAMMA CAMERA COLLIMATION TO TOMOGRAPHY AND IMAGE ENHANCEMENT Ph.D. Thesis
David Ronald Simpson 1981 148 p
Avail: Univ. Microfilms Order No. 8127692

Multi-pinhole gamma camera collimation was introduced in the field of emission tomography. This collimation process simultaneously produces several images covering a limited angular range, which may then be recombined to obtain tomographic slices of the object imaged. A possible method for improving the images obtained by this technique by combining two multi-pinhole views taken 90 deg apart was investigated. Collimators were designed and built both for tomography and imaging tablet disintegration, and computer programs were written to reconstruct the images by simple backprojection and by filtered backprojection. The use of multi-pinhole collimators to image the disintegration of tablets in vivo was clearly demonstrated. Phantom tests done in vitro were capable of imaging defects as small as 5 sq mm, while images made with real tablets both in vitro and in vivo readily showed the onset and progress of the tablet disintegration. Dissert. Abstr.

THE EFFECT OF ATMOSPHERIC TURBULENCE ON AIR TO GROUND PHOTOGRAPHY
J. G. Ballantyne 18 May 1981 31 p refs
(RAE-TR-81065; RAE-IT-175; BR80525) Copyright. Avail: Issuing Activity

The theory of optical effects of atmospheric turbulence is summarized and the derivation of an equation relating the modulation transfer function of an optical path through the atmosphere to a weighted integral of the structure constant of refractive index along that path is outlined. Methods of estimating the structure constant from meteorological parameters are discussed and FORTRAN subroutines for evaluating the integral and estimating the modulation transfer function of the path under any required conditions are given. High aperture optical systems are considered preferable because they permit shorter exposures, thereby reducing or eliminating turbulent image movement. Author (ESA)

SPATIAL ENERGY DISTRIBUTION Patent Application
Thomas J. Lash, inventor (to NASA) Filed 2 Oct. 1981 10 p
(NASA-Case-LAR-12631-1; US-Patent-Appl-SN-308008) Avail: NTIS HC A02/MF A01 CSCL 14B

A system is described in which an X-Y recorder (translator) is modified to automatically scan a detector in a plane perpendicular to the beam of a tunable diode laser to obtain a spatial energy distribution of the beam. The recording pen of a second X-Y recorder is moved in synchronism with the detector and records the output of the detector. Consequently, a recording is made by the second recorder that represents the energy distribution of the beam in the plane scanned by the detector. A step signal is applied to the translator and recorder to move the detector and the recording pen in the Y-direction and is also applied to the X-input of recorder to skew the recording to make it appear to be three-dimensional. SYSTEM FOR STABILIZATION AND POINTING OF A STRATOSPHERIC BALLOON-BORNE TELESCOPE [SISTEMA PARA ESTABILIZACAO E APONTAMENTO DE TELESCOPIO EMBARCADO EM BALAO AESTRATOSFERICO]

Paulo Donato Allemand Borges, Cesar Celeste Ghizoni, and Carlos de Oliveira Lino Jun. 1981 9 p refs In PORTUGUESE; ENGLISH abstract Presented at the 2nd Natl. Meeting on Automation, Salvador, Brazil, 8-15 de Jul. 1981
(INPE-2103-RPE/330) Avail: NTIS HC A02/MF A01

A control system for pointing and stabilization of an infrared radiometer to be flown in stratospheric balloon missions was developed and built. This system permitted the azimuth stabilization and orientation of the entire scientific platform, on which all missions subsystems were assembled, as well as the elevation of the longitudinal axis of the telescope alone. The classical control philosophy with linear and angular position and velocity sensors is used. The control reference was supplied by an on-board microcomputer, via telecommand. A flight in November 1980 produced a one degree accuracy in the elevation control loop and a quite acceptable stabilization in azimuth for the requirements of that mission. Author

APPLIED RESEARCH AND DEVELOPMENT OF FALLING-SPHERE DENSITOMETERS PAYLOADS OF IMPROVED DESIGN Final Report, Jan. 1979 - Aug. 1981

Donald H. Fryklund Aug. 1981 66 p
(Contract F19628-79-C-0058; AF Proj. 6690)
(AD-A108316; AC-267; AFGL-TR-81-0233) Avail: NTIS HC A04/MF A01 CSCL 14/2

Four complete falling-sphere densitometer systems were designed and launched, with generally satisfactory results, at three locations: New Mexico, Sweden, and Alaska. The task included the provision and launch responsibility for the nose cones and ejection systems for all densitometers and the provision and launch responsibility for two unique support units for the payloads flown in Sweden. Refinements were made to improve system accuracy in the calibration and data reduction techniques for the Z-axis channels of the sphere. The Z-axis amplifiers were modified to improve their performance. A wide-band accelerometer was designed and integrated into the sphere system to provide for a high resolution instrument to enable small-scale wind and turbulence studies of the high-altitude atmosphere. The sphere was reintegrated to provide for a more powerful transponder and a PCM-ranging system. A study was made to reassess the sphere configuration to reduce its gross weight. Design changes will reduce this weight by 1 lb. Additional volume was recovered for future expansion in the sphere instrumentation. GRA

ERROR PROCESSING TECHNIQUES FOR THE MODIFIED READ FACSIMILE CODE Final Report

Richard A. Schaphorst Washington National Communication System Sep. 1981 52 p refs
(Contract DCA100-80-C-0233)
(AD-A108608; NCS-TIB-81-9) Avail: NTIS HC A04/MF A01 CSCL 09/4

The purpose of this Technical Information Bulletin is to evaluate the relative effectiveness of four different 'error processing techniques' for the Modified READ code. The four different techniques which are investigated are listed below in order of increasing complexity of implementation: Print White (PW); Print Previous Line (PPL); Print Previous Line/White (PLW), and Normal Decode/Previous Line (NDPL). The analysis is performed by means of computer simulation. A total of 72 computer runs were performed at different combinations of CCITT test document, vertical resolution, K-factor and source of transmission errors. The performance of four candidate techniques is measured by both objective and subjective procedures. The quantitative analysis is accomplished using the Error Sensitivity Factor (ESF) which represents the average number of incorrect pels in the output document caused by a transmission error. The subjective analysis is based upon viewing actual error-contaminated images generated in the simulation process. The quantitative performance of the Print White technique was found to be significantly poorer than the other three. The ESP of the PW, under the conditions analyzed, was found to be 56.3, while the average of the other three is 46.1. The error performance of the PLW approach was found to be subjectively superior to the Print White technique and comparable to the Previous Line technique. The NDPL has superior legibility and shows promise for improved overall error performance. Author (GRA)

PRELIMINARY DESIGN OF A HYDRAULIC POWER SUPPLY FOR A LAMINAR JET ANGULAR RATE SENSOR

T. R. Small, W. O. Wilkinson, F. F. Mark, and R. A. Makofski Adelphi, Md. HDL Nov. 1981 45 p refs
(Contract N00024-78-C-5384; DA Proj. 1L1-62120-AH-25)
(AD-A108729; HDL-CR-80-384-2) Avail: NTIS HC A03/MF A01 CSCL 14/2

The preliminary design of a hydraulic power supply for a laminar jet angular rate sensor is described. The requirements upon which this design was based are that the power supply provide stable pressure and flow rates (of the order of 10 psi and 1 l min) over the military temperature range (-60 F to 180 F). Reliability, safety, small size, and low cost are also factors that were considered. State-of-the-art equipment and passive control are specified. Also presented are test plans for measuring the performance of the proposed power supply and a limited literature review of potential hydraulic fluids. Author (GRA)

A WATER VAPOR MONITOR USING DIFFERENTIAL INFRARED ABSORPTION

Darrel E. Burch and David S. Goodsell Sep. 1981 36 p refs
(Contract EPA-68-02-3238)
(PB82-114422; EPA-600/2-81-162) Avail: NTIS HC A03/MF A01 CSCL 14B

A water vapor monitor was developed with adequate sensitivity and versatility for a variety of applications. Two applications are the continuous monitoring of water in ambient air and the measuring of the mass of water desorbed from aerosol filters. The sample gas may be held static, or flow continuously through the 56 cc sample cell, temperature controlled at 45 C. Infrared energy from a tungsten-iodide bulb passes through a rotating filter wheel and the sample cell to a PbS detector. The infrared beam passes through the sample gas twice to produce a total optical path of 40 cm. The infrared beam passes alternately through two semicircular narrow bandpass filters. Absorption by the water vapor in the sample produces a 30-Hz modulation of the detector signal that is proportional to the water concentration. The maximum concentration that can be measured accurately is approximately 5%.

DEVELOPMENT OF A MULTIDETECTOR PETROLEUM OIL IN WATER MONITOR Final Report, May 1978 - Jan. 1981

Robert W. Melvold Sep. 1981 90 p refs
(Contract EPA-68-03-2648)
(PB82-105206; EPA-600/2-81-206) Avail: NTIS HC A05/MF A01 CSCL 14B

A prototype petroleum oil-in-water monitoring system that continuously measures oil (whether free, suspended, dissolved, or emulsified) in water carrying a variety of potential interfering substances was developed. An extensive desk-top survey of commercially available oil monitors was carried out. Three devices were selected for thorough laboratory evaluation: (1) Sigrist Fluorescence Monitor Model FLJ, (2) CE Invalco D.O.W. Monitor, and (3) Horiba OCMA-25 Oil Content Monitor. The construction of a flow loop and its operation, the installation of the selected detectors in the breadboard system, the development of a data retrieval system, the calibration methodology employed, the initial checkout of the detectors, and the extensive multidetector evaluation of each detector's performance for quantifying petroleum oil in the presence of impurities and other interferents are described.

SEMICONDUCTOR INJECTION LASERS WITH A CIRCULAR RESONATOR: A STUDY OF GaAs-(GaAl)As DIELECTRIC WAVEGUIDES AND THEIR INCORPORATION INTO A LASER RESONATOR Ph.D. Thesis
Andrew Shuh-Huei Liao 1981 195 p
Avail: Univ. Microfilms Order No. 8200184

A semiconductor injection laser with a circular resonator for integrated optics applications is studied. Electromagnetic wave propagation in dielectric rectangular waveguides is analyzed by means of an improved approximate analysis. The effect of the index difference and the aspect ratio on the modal configuration of a dielectric rectangular waveguide is examined. Propagation characteristics of both straight and curved GaAs-(GaAl)As high mesa waveguides are investigated. Field distribution, propagation constant and radiation losses of the guided modes are determined. Dissert. Abstr.

THEORETICAL STUDIES OF SOLAR-PUMPED LASERS Progress Report, 16 Jul. 1981 - 15 Jan. 1982
Wynford L. Harries Feb. 1982 29 p refs
(Grant NsG-1568)
(NASA-CR-168554; PTR-82-2) Avail: NTIS HC A03/MF A01 CSCL 20E

Solar-pumped lasers were investigated by comparing experimental results from pulse experiments with steady state calculations. The time varying behavior of an IBr laser is studied. The analysis is only approximate, but indicates that conditions occurring in a pulsed experiment are quite different from those at steady state. The possibility of steady-state lasing in an IBr laser is determined. The effects of high temperatures on the quenching and recombination rates are examined. Although uncertainties in the values of the rate coefficients make it difficult to draw firm conclusions, it seems steady state running may be possible at high temperatures. S.L.

INVESTIGATION OF POSSIBILITIES FOR SOLAR-POWERED HIGH-ENERGY LASERS IN SPACE
In NASA. Langley Research Center Space Laser Power Transmission System Studies Feb. 1982 p 45-56 (For primary document see N82-18578 09-36)
Avail: NTIS HC A10/MF A01 CSCL 20E

Solar pumped lasers were investigated. The literature was reviewed for possible solar laser candidates from optical pumping experiments. A baseline CO electric discharge laser system was shown to be technically feasible. The most promising direct solar pumped laser was identified to be CF3I. Using the 'STAG' solar laser concept and CF3I, it was found that such a system could be weight competitive with the baseline CO laser system. N.W.

UTILITY AND TECHNOLOGY FOR A SPACE CENTRAL POWER STATION
Paul F. Holloway and L. Bernard Garrett *In its* Space Laser Power Transmission System Studies Feb. 1982 p 85-122 refs Presented at the Second AIAA Conf. on Large Space Platforms, Feb. 1981 (For primary document see N82-18578 09-36)
Avail: NTIS HC A10/MF A01 CSCL 20E

The technological and economical impacts of a large central power station in Earth orbit on the performance and cost of future spacecraft and their orbital-transfer systems are examined. It is shown that beaming power to remote users cannot be cost-effective if the central power station uses the same power generation system that would be readily available for provision of on-board power. Laser transmitters/receivers to make central power stations feasible are considered. The cost-effectiveness of meeting Earth-orbiting spacecraft electrical demands from a central power station was analyzed, indicating that this application cannot justify the investment required for the central station. Key technology needs which must be met to enable a viable central power station in the future are identified. N.W.

INVESTIGATION OF A 460 nm XeF LASER Final Report
C. H. Fisher Jun. 1981 86 p refs
(Contract N00014-78-C-0343; NR Proj. 395-568)
(AD-A108132; MSNW-1136) Avail: NTIS HC A05/MF A01 CSCL 20/5

The rare gas halide lasers have been extensively developed into efficient, high energy lasers operating in the near ultraviolet region of the spectrum. Until recently, most of the development in XeF had concentrated on the B>X transition at 350 micrometers. There is an even longer wavelength transition in XeF, the C-A continuum band at 460 micrometers. This transition has had several advantages over the shorter wavelength transitions in existing XeF and KrF lasers, including tunability and optimum atmospheric and aquatic transmission. The purpose of this program was to demonstrate lasing on the C-A transition of XeF and to gather the kinetic data necessary to optimize the laser performance. Author (GRA)

HIGH TEMPERATURE IN ABSORPTION MEASUREMENTS Final Report, 15 Aug. 1980 - 30 Jun. 1981
Robert H. Krech and Evan R. Pugh Edwards AFB, Calif. Air Force Rocket Propulsion Lab. Sep. 1981 64 p refs
(Contract F04611-80-C-0042)
(AD-A108601; PSI-TR-279; AFRPL-TR-81-79) Avail: NTIS HC A04/MF A01 CSCL 20/5

The temperature dependence of the absorption coefficient of water vapor was measured to determine the feasibility of using water vapor as a molecular seed to couple 10.6 micrometer CO2 laser radiation into a propellant for use in a high performance laser heated rocket thruster. A series of shock tube experiments were performed to determine the temperature dependence of the absorption coefficient of water vapor at high temperatures on the P(16), P(18) and P(20) 10.6 micrometer CO2 laser transitions. Measurements were made behind both incident and reflected shock waves encompassing a temperature range from 600 K to 3700 K at pressures from 1 to 40 atmospheres in 2, 5, and 10 mole percent water vapor in argon gas mixtures. Within the spectral range (944 to 948 cm) covered, no significant variation in the absorption coefficient was observed as a function of laser wavelength, water concentration, total pressure, or collision partner. Observations suggest that the water lines are sufficiently broadened to act as a continuum absorber under conditions to be found in a laser-heated rocket thruster. The measured laser high temperature absorption coefficients are 50 percent lower than the values obtained from the Ludwig empirical curve fit to low resolution data. GRA

PULSED HETERODYNE CO2 LASER/SCANNER SYSTEM

G. B. Jacobs Sep. 1981 46 p

(Contract F19628-80-C-0184; AF Proj. 6670)

(AD-A108186; SCIENTIFIC-1; AFGL-TR-81-0262) Avail: NTIS HC A03/MF A01 CSCL 17/5

Ten micron heterodyne laser radar offers a new type of remote sensor that can add significantly to our characterization and understanding of the atmosphere. For example, accurate range resolved measurements of air velocity via the Doppler of aerosol backscatter to distances of tens of kilometers will yield a better understanding of wind shear. This report describes the design of an operational laser radar trailer facility to permit these measurements. This is a design evaluation report intended to aid the government in judging the capability of our design to meet the government's requirements. The system is to incorporate the high pulse repetition frequency, high power electron beam injection CO2 laser developed earlier by the General Electric Company. The system is to be assembled in a trailer to be supplied by the government and will permit hemispherical scanning with a laser beam of less than .002 degrees beamwidth. Author (GRA)

LASER HOLE BURNING SPECTROSCOPY: A HIGH RESOLUTION PROBE OF MOLECULAR ENVIRONMENTS Final Report, 1 Jun. 1979 - 1 Jun. 1981

R. M. Macfarlane and R. M. Shelby 1 Jun. 1981 57 p refs

(Contract F49620-79-C-0108; AF Proj. 2303)

(AD-A108549; AFOSR-81-0790TR) Avail: NTIS HC A04/MF A01 CSCL 20/5

Laser induced hole burning in optical absorption bands of low temperature solids was investigated mechanisms for population hole burning, the interactions with the environment which limit the hole widths and the use of hole burning for ultra high resolution spectroscopy were emphasized. Examples of hole burning in new classes of materials are presented. Hole recovery was used to determine nuclear spin lattice relaxation rates in praseodymium doped crystals. For allowed optical transitions (e.g., singlet states of zinc porphyrin, dibromoindigo and color centers in alkali halides). For longer lived optical levels in crystalline materials, e.g., those containing rare Earth ions, the hole widths are narrower and are limited by dynamical interactions with surrounding nuclei. In amorphous materials such as europium doped silicate glass, hole widths are much broader, limited by low frequency tunneling motions. Hole burning measurements were complemented by time domain coherent transient (photon echo, and optical free decay) measurements of homogeneous linewidths. E.A.K.

WAVELENGTH SCALING FOR REACTOR-SIZE LASER FUSION TARGETS Interim Report

J. H. Gardner and S. E. Bodner 10 Dec. 1981 16 p refs

(Contract DE-AI08-79DP)

(AD-A108547; NRL-MR-4623) Avail: NTIS HC A02/MF A01 CSCL 18/1

The symmetric implosion of pellet shells will require sideways thermal transport smoothing of any laser intensity nonuniformities. A scaling law shows a surprisingly strong laser wavelength dependence for this smoothing mechanism; it places a large premium on the use of longer wavelength near-infrared lasers. This smoothing requirement conflicts with the advantages of shorter laser wavelengths for controlling deleterious plasma instabilities. Author (GRA)

COMPETITION EFFECTS IN LASERS Final Report, 1 Oct. 1980 - 30 Sep. 1981

L. Mandel Nov. 1981 11 p refs

(Grant AF-AFOSR-0026-81; AF Proj. 2301)

(AD-A108658; AFOSR-81-0804TR) Avail: NTIS HC A02/MF A01 CSCL 20/5

This Final Report describes research. The first two-time photoelectric correlation measurements of a ring laser were completed during this period, which demonstrated the effect of mode competition in modifying the characteristics of a laser. Theoretical quantum treatments of a two-mode ring laser, and of a laser with coupled transitions were completed, and phase transition effects in a laser exhibiting optical bistability, and one with a saturable absorber, were investigated. The research resulted in four publications in the scientific literature, and 11 lectures describing various aspects of the research were presented at scientific meetings and research seminars. These are all listed in the report. GRA

STUDY OF LASER CREATED METAL VAPOUR PLASMAS Annual Technical Report, 1 Oct. 1980 - 30 Sep. 1981

R. M. Measures Sep. 1981 87 p refs

(Grant AF-AFOSR-0057-80; AF Proj. 2301)

(AD-A108588; AFOSR-81-0789TR) Avail: NTIS HC A05/MF A01 CSCL 20/5

Laser resonance saturation represents a powerful new form of interaction that can lead at high densities to extremely rapid and efficient coupling of laser energy into both gases and plasmas. A comprehensive experimental facility and a theoretical program for studying these interactions in alkali-vapors was developed. Preliminary calculations have suggested that laser resonance saturation could lead to extensive ground level burnout of certain kinds of atoms or ions and that this could lead to the creation of a ground level inversion in these species. This approach could lead to the development of short wavelength lasers of high quantum efficiency. Author (GRA)

INVESTIGATION OF COLD CATHODES FOR LONG LIFE CO SUB 2 WAVEGUIDE LASERS Annual Summary Report

U. Hochuli Nov. 1981 17 p

(Contract N00014-79-C-0312)

(AD-A108692) Avail: NTIS HC A02/MF A01 CSCL 20/5

Within a year's time the life of the 1.5W CO2 waveguide laser was extended from 1500 hours to over 8000 hours. After this period some loose, sputtered cathode material is still found in the laser. This situation can not be tolerated for lasers used in the field. Discharge tube observations indicate that other cathode materials exist that seem to produce sputtering products with better wall adhesion properties. Author (GRA)

FORMULATION OF NORMALIZED NON-LINEAR FREE ELECTRON LASER EQUATIONS Interim Report
C. M. Tang and P. Sprangle 9 Dec. 1981 43 p refs
(ARPA Order 3817)
(AD-A108358; NRL-MR-4670) Avail: NTIS HC A03/MF A01 CSCL 20/5

The general non-linear self-consistent equations describing the Free electron laser (FEL) in the steady state amplifying configuration is derived with the space charge effects and all the efficiency enhancement schemes: (1) a spatially varying wiggler amplitude and/or period and (2) a d.c. electric field E sub DC (z) = (-(del phi sub DC)/del z)e-carat sub z. All the efficiency enhancement schemes are shown to be somewhat equivalent. For a variable period magnetic wiggler, the FEL equations can be appropriately normalized to a three parameter set of coupled equations. All operating regimes are covered by these normalized equations. The condition for space charge to be unimportant is given. In the absence of the space charge effects, the three parameter set of equations reduces to a two parameter set. The inclusion of additional efficiency enhancement schemes increases the number of parameters to describe the FEL. Curves showing the efficiency, radiation amplitude and growth rate will be presented. Author (GRA)

PULSED AND CW SEMICONDUCTOR LASER RANGE FINDING FOR SPACE FLIGHT APPLICATIONS [GEPULSTE UND CW-HALBLEITERLASER-ENTFERNUNGSMESSER FUER RAUMFAHRTANWENDUNGEN]
S. Manhart, T. Halldorsson, G. Sepp, and D. Siemsen 1981 13 p ref Partly in GERMAN and ENGLISH Presented at Laser 81, June 1981
(MBB-UA-563-81-O) Avail: NTIS HC A02/MF A01

The application of a radar range equation and the operational possibilities of the semiconductor laser range finder in space flights was demonstrated. Pulse recordings and phase measurements were analyzed for performance and specific advantages and disadvantages on different mission tasks. It is disclosed that for the detection and macroscopic measurements of reflector targets a pulsed laser system with pulse time measurments, and for the precision range finding a modulated continuous wave laser with phase measurement are the preferred methods. A concept in which both measuring methods, together with a biaxial visibility scanning are integrated into units of measurement is presented. Transl. by E.A.K.

N82-18600# European Space Agency, Paris (France).
MEASUREMENTS OF LIDAR BACKSCATTERING FROM CLOUDS Thesis - Fachhoschule, Munich
Egmont Wolff Oct. 1981 75 p refs Transl. into ENGLISH of "Lidar - Rueckstreumessungen an Wolken", Rept. DFVLR-Mitt-80-12 DFVLR, Oberpfaffenhofen, West Germany, Jul. 1980 95 p
(ESA-TT-689; DVFLR-Mitt-80-12) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 17

The operating principles, main elements (laser and detectors) and theoretical characteristics of the system are described. On-line data acquisition facilities are discussed. Two telescopes are used simultaneously to receive the parallel and perpendicular components of the polarized cloud backscatter signatures. Details are given on calibrating the system and on how to distinguish between ice and water clouds from polarization measurements. Polarization and multiple scattering effects are discussed.

A COMPLETELY DEFORMABLE TIMOSHENKO BEAM TYPE SLIDER CRANK MECHANISM Ph.D. Thesis
Gabriel O. Amazigo 1981 177 p
Avail: Univ. Microfilms Order No. 8200456

The dynamic response of an elastic slider crank mechanism was investigated. The crank and connecting rod are assumed to deform axially and flexurally. The flexural vibrations include shear deformation and rotary inertia according to the theory of S. P. Timoshenko. External force was applied to the rigid slider which travels in presence of dynamic friction between two parallel, deformable and/or rigid, guides. R. D. Mindlin and L. E. Goodman's method for time dependent boundary conditions (forced vibrations) was applied at the fixed and pinned connections of the mechanism. All the pinned connections are assumed to be frictionless. One of the advantages of the procedure presented is that it can be applied to, and/or extended to, a more complex linkage.

RESEARCH IN TRIBOLOGY AND BEARINGS

Chris Stanton and Harry Chalis 1980 55 p

(PB82-106923; ISBN-0-901660-39-6) Avail: NTIS HC A04/MF A01 CSCL 13I

A cross section of recent and current research in tribology and bearings is reported. The results range from the discovery of basic principles, the essential foundations on which future development will be built, to the directly practical and usable processes and design information. The projects have been grouped, all aspects of tribology are interrelated while it is emphasized that materials and lubrication are vital in the design of bearings and vice versa are implicated. Design and development are implicated on materials, and materials and lubrication. GRA

MIXTURE MOTION IN AN ENGINE CYLINDER

H. Daneshyar and D. E. Fuller 1981 44 p refs

(PB82-121146; CUED/A-THERMO/TR-15-1981; ISSN-0309-6513) Avail: NTIS HC A03/MF A01 CSCL 21G

A hot-wire anemometer was used to measure the gas velocity in an engine model. The calibration law used gave excellent calibrations in wind tunnels when the wire temperature and the air density were varied. Analogue signals (pressure, anemometer output, trigger pulse) from the instrumentation of the engine model were recorded on magnetic tape. A series of computer programs were developed to sample the analogue signals from the tape and to calculate and plot the instantaneous velocities and their means and standard deviations over many engine cycles, the mean velocity and the turbulence intensity, over a period of a cycle, and their means and standard deviations over many cycles. GRA

EFFECTS OF WELD ECCENTRICITY ON LONGITUDINAL SHRINKAGE

M. P. Wong 1981 68 p refs

(PB82-121153; CUED/S-STRUCT/TR-89-1981; ISSN-0309-7447) Avail: NTIS HC A04/MF A01 CSCL 13E

The effects of weld eccentricity on longitudinal shrinkage are investigated. Tests on a total of 31 single-pass weld specimens were conducted in 5083 aluminum, with the aim of studying how shrinkage takes place in welded plates. The results were compared with the new theoretical work. The specimens were prepared with either in-plane or out-of-plane weld eccentricity, or both. GRA

SHRINKAGE EFFECTS IN BUTT WELDS IN 5083 ALUMINIUM

W. P. Wong 1981 54 p refs

(PB82-121138; CUED/D-STRUCT/TR-91-1981; ISSN-0309-7447) Avail: NTIS HC A04/MF A01 CSCL 13E

Experimental work carried out at Cambridge, for the A.M.T.E., on shrinkage effects in butt welds in 5083 aluminum are described in detail. Both unbacked and backed butt welds were investigated. Measurements were mainly conducted on longitudinal weld shrinkage. Simple formulae were obtained for calculating the tendon force in single and multipass butt welds. GRA

SHRINKAGE EFFECTS IN T-FILLET WELDS IN 5083 ALUMINUM

M. P. Wong 1981 46 p refs

(PB82-114570; CUED/D-STRUCT/TR-92-1981; ISSN-0309-7447) Avail: NTIS HC A03/MF A01 CSCL 13E

Experimental work on shrinkage effects in T-fillet welds in 5083 aluminum is described in detail. The validity of tendon force concept when applied to welded T-sections was investigated. A simple formula was developed to predict mean compressive residual stresses at the flange of a two-pass T-fillet joint. Reasons were suggested for the cause of randomness of stress gradient direction in the web (stiffener), as measured in stiffened panels. GRA

ULTRASONIC INPUT-OUTPUT FOR TRANSMITTING AND RECEIVING LONGITUDINAL TRANSDUCERS COUPLED TO SAME FACE OF ISOTROPIC ELASTIC PLATE Final Report

James H. Williams, Jr., Hira Karagulle, and Samson S. Lee Washington, D.C. NASA Feb. 1982 29 p refs

(Grant NsG-3210)

(NASA-CR-3506) Avail: NTIS HC A03/MF A01 CSCL 14D

The quantitative understanding of ultrasonic nondestructive evaluation parameters such as the stress wave factor were studied. Ultrasonic input/output characteristics for an isotropic elastic plate with transmitting and receiving longitudinal transducers coupled to the same face were analyzed. The asymptotic normal stress is calculated for an isotropic elastic half space subjected to a uniform harmonic normal stress applied to a circular region at the surface. The radiated stress waves are traced within the plate by considering wave reflections at the top and bottom faces. The output voltage amplitude of the receiving transducer is estimated by considering only longitudinal waves. Agreement is found between the output voltage wave packet amplitudes and times of arrival due to multiple reflections of the longitudinal waves. E.A.K.

ACOUSTIC MICROSCOPY FOR NONDESTRUCTIVE EVALUATION OF MATERIALS Annual Report, 1 Jul. 1980 - 30 Jun. 1981

C. F. Quate Jul. 1981 60 p refs

(Contract F49620-78-C-0098; ARPA Order 3569; AF Proj. 2306)

(AD-A108423; SU-GL-3295; AFOSR-81-0773TR) Avail: NTIS HC A04/MF A01 CSCL 20/1

This report covers the results of a research program on Acoustic Microscopy directed toward the study of integrated circuits and solid materials. This new type of microscopy permits one to examine microscopic features that are unaccessible in the optical microscope. Thus detail beneath metallization layers as well as the grain boundaries in polished samples can be examined without resorting to chemical etching. Adhesion of thin film is a field where acoustic microscopy will play an important role. Author (GRA)

(Contract ESA-2926/76/NL-HP)

(ESA-CR(P)-1470-Vol-1) Avail: NTIS HC A05/MF A01

The nature and composition of a variety of passivation overcoatings are reviewed including methods of deposition, postdeposition treatment, and properties, such as density and internal stress. The removal of overglazes is considered. Several etchant systems are discussed and etch rate data are presented. Etching mechanisms are explained. The Dry-Ox process is evaluated. This system, utilizing anhydrous hydrogen fluoride, seems the most suitable etching procedure available. Aluminum damage, occurring during device processing, in use, or caused by passivation layer removal, is also discussed along with electrochemical and chemical etching of silicon and of metals. A method for chemical etching analysis of single integrated circuit devices is outlined and techniques for the microscopic examination of junctions are listed. Handling and safety aspects of hydrofluoric acid based etchants are considered. Author (ESA)

N82-18619# Middlesex Polytechnique, Enfield (England). Microelectronics Centre.

THE APPLICATION OF CHEMICAL ETCHING TO THE FAILURE ANALYSIS OF SEMICONDUCTOR DEVICES (EXPERIMENTAL). VOLUME 2: PHASE 2 REPORT

G. P. Shorthouse and J. B. Butcher Paris ESA Jan. 1979 51 p refs 2 Vol.

(Contract ESA-2926/76/NL-HP)

(ESA-CR(P)-1470-Vol-2) Avail: NTIS HC A04/MF A01

The development of an etchant or series of etchants that can be used in the failure analysis of semiconductor devices in order to remove passivating overglazes without causing damage to underlying metal or thermal oxide layers was studied. Various GaAs LED's were decapsulted, the chips removed, and sectioned. The exposed junctions were delineated with dilute nitric acid/iron. Silicon devices were also decapsulated. The nitride passivation layer was removed using and etchant specially formulated to prevent any damage occurring to the underlying metallization. The devices were operated after the nitride removal and voltage contrast scanning electron micrographs of them were produced. The metal layers were removed in a variety of etchants; no satisfactory way was found to remove aluminum from titanium. Author (ESA)

THE RESPONSE OF SOLIDS TO ELASTIC/PLASTIC INDENTATION TO ADHESION MEASUREMENTS Ph.D. Thesis
Shu-Sheng Chiang 1981 143 p
Avail: Univ. Microfilms Order No. 8200053

Indentation plasticity and indentation fracture are analyzed. The analysis permits relations to established between material properties (notably hardness, yield strength and elastic modulus) and the magnitudes of the indentation and plastic zone. The predictions demonstrated are fully consistent with observations performed on a wide range of materials. The indentation stress fields are also adapted to generate predictions of indentation fracture thresholds for the three dominant crack types: radial, median and lateral cracks. The predictions are generally consistent with experimental observations. The indentation method was applied to determine the adhesion of interfaces between thin films and substrates. This method provides a quantitative measure of the interface fracture resistance and has the advantage of simplicity and reproducibility. The method was demonstrated for a range of ZnO/Si systems and the adhesion was correlated with acoustic properties. Dissert. Abstr.

TIME DOMAIN VIBRATION TESTING TECHNIQUES IN STOCHASTIC ENVIRONMENT: MODEL REFERENCE ADAPTIVE SYSTEM APPROACH Ph.D. Thesis
Saad Abdel-Rahman Zaghlool 1981 108 p
Avail: Univ. Microfilms Order No. 8200316

Digital schemes for the implementation of time domain vibration testing techniques which are capable of coping with the stochastic nature of their data were studied. The schemes may either employ one shot, accumulative or recursive solution strategies and they appear to have high noise rejection performance and yield consistent and accurate results. Families of recursive algorithms which have fast rate of convergence and are based upon an integral adaption mechanism with constant of decreasing gain and may, or may not, include proporational adaption mechanism are emphasized. Tested recursive algorithms are: series-parallel are emphasized. Tested recursive algorithms are: series-parallel instrumental variable parallel modified parallel extended parallel, extended least square, combined series-parallel/parallel and autoregressive moving average algorithm. The analysis procedure is presented in a unified approach, and makes use of sampled time data of a structure performing free or forced vibration with only finite number of modes excited. Dissert. Abstr.

STATIC AND DYNAMIC ANALYSIS OF AXIALLY LOADED WIRE ROPES Ph.D. Thesis
Gary James Butson 1981 107 p
Avail: Univ. Microfilms Order No. 8127559

The static and dynamic behavior of axially loaded wire rope were investigated. The longitudinal, torsional and transverse displacements are determined for a rope which is initially straight in the reference configuration and loaded by an axial force and twisting moment. The static response of wire rope is analyzed using a recently developed technique in which the individual wires in a rope are examined. The effect of friction between adjacent wires on the nonlinear response is determined for the simplest wire rope geometry. The dynamic behavior of wire rope is analyzed for small displacements about the static equilibrium position. Solutions for some initial value problems for suspended wire ropes are determined by means of a Laplace transform with a numerical inversion technique. Solutions for the natural modes of vibration of taut rope are found by an eigenvalue approach. Dissert. Abstr.

AN INVESTIGATION OF SHIP PROPELLER FATIGUE Ph.D. Thesis
Hendrik Pieter Egbert Helle [1982] 211 p refs
Avail: NTIS HC A10/MF A01

Fatigue is a major failure cause in controllable pitch propellers, and practically the only cause in fixed pitch monobloc propellers. Two different types of causes are responsible for fatigue failure. Incidental causes are usually due to misuse or improper repairs, for instances, welding in critical areas or insufficiently annealed weldments. A systematic failure due to inherent weakness occurs when a number of aggravating fatigue factors coincide, such as an unusually high dynamic blade load and an exceptionally large undetected casting defect in a critical area plus one or two unfavourable production factors (low materials strength, high residual stresses). The fatigue failure risk of a propeller that enters operation, is determined therefore by its design stress and the quality control procedure it has been subjected to. S.L.

(Contract DAAK30-78-C-0096)
(AD-A108685; U-of-Iowa-50; TACOM-TR-12588) Avail: NTIS HC A04/MF A01 CSCL 20/11

A method for formulating and automatically integrating the equations of motion of quite general constrained dynamic systems is presented. Design sensitivity analysis is also carried out using a state space method that has been used extensively in structural design optimization. Both dynamic analysis and design sensitivity analysis and optimization are shown to be well-suited to application of efficient sparse matrix computational methods. Numerical integration is carried out using a stiff numerical integration method that treats mixed systems of differential and algebraic equations. A computer code that implements the method of planar systems is outlined and a numerical example is treated. The dynamic response of a classical slider-crank is analyzed and its design is optimized. DESIGN SENSITIVITY ANALYSIS AND OPTIMIZATION OF CONSTRAINED DYNAMIC SYSTEMS Interim Report, period ending Jun. 1979
N. C. Barman, Edward J. Haug, and Ronald R. Beck (Missouri Univ. -Rolla) Warren, Mich. Army Tank Automotive Command 16 Jun. 1981 180 p refs
(Contract DAAK30-78-C-0096)
(AD-A108684; U-of-Iowa-56; TACOM-TR-12587) Avail: NTIS HC A09/MF A01 CSCL 20/11

In this report, the technical objective is the derivation of a systematic and unified theory and organization of a corresponding general computer program for the design of constrained dynamic systems by judicious selection of the most suitable methods from the following branches of mathematics and mechanics: (a) Optimization Methods, (b) Rigid Body Mechanics, (c) Numerical Integration Methods, and (d) Matrix Manipulation Methods. Accordingly, a method of formulating and automatically integrating the equations of motion and design sensitivity adjoint equations for general constrained dynamic systems is presented. Design sensitivity analysis is carried out using a state-space method that has previously been used for design optimization of linear structural systems. Application of efficient sparse matrix computational methods is shown to be suitable for both dynamic and design sensitivity analyses and for interactive strained system is treated with three degrees of freedom. Algebraic equations prescribing constraints between various bodies are then written and a Lagrangian formulation is used to write the dynamical equations of motion for each body of the system. A stiff predictor-corrector numerical integration (GEAR) algorithm is used for numerical integration of mixed systems of nonlinear differential equations of motion and algebraic equations of constraint (together with spring-damper relations and other user-supplied equations). GENERALIZED COORDINATE PARTITIONING IN DYNAMIC ANALYSIS OF MECHANICAL SYSTEMS Final Report, period ending Dec. 1980
Roger A. Wehage, Edward J. Haug, and Ronald R. Beck (Missouri Univ. -Rolla) Warren, Mich. Army Tank-Automotive Command 16 Jun. 1981 197 p refs
(Contract DAAK30-78-C-0096; DAAG29-79-C-0221)
(AD-A108683; U-of-Iowa-75; TACOM-TR-12590) Avail: NTIS HC A09/MF A01 CSCL 20/11

A computer-based method for formulation and efficient solution of nonlinear, constrained differential equations of motion is developed for planar mechanical systems. Nonlinear holonomic constraint equations and differential equations of motion are written in terms of a maximal set of Cartesian generalized coordinates, to facilitate the general formulation of constraints and forcing functions. A Gaussian elimination algorithm with full pivoting decomposes the constraint Jacobian matrix, identifies dependent variables, and constructs an influence coefficient matrix relating variations in dependent and independent variables. This information is employed to numerically construct a reduced system of differential equations whose solution yields the total system dynamic response. A numerical integration algorithm with positive-error control, employing a predictor-corrector algorithm with variable order and step-size, is developed that integrates for only the independent variables, yet effectively determines dependent variables. A general method is developed for dynamic analysis of systems with impulsive forces, impact, discontinuous constraints, and discontinuous velocities. This class of systems includes discontinuous kinematic and geometric constraints that characterize backlash and impact within systems. GRA

KINEMATIC ANALYSIS OF MECHANICAL SYSTEMS Interim Report, period ending Dec. 1979
Rajiv Rampalli, Edward J. Haug, and Ronald R. Beck (Missouri Univ. - Rolla) Warren, Mich. Army Tank-Automotive Command 16 Jun. 1981 68 p refs
(Contract DAAK30-78-C-0096)
(AD-A108682; U-of-Iowa-60; TACOM-TR-12589) Avail: NTIS HC A04/MF A01 CSCL 20/11

It is intended in this report to develop a method of kinematically analyzing mechanical systems. A computer code that automatically generates a set of nonlinear equations describing the system and solves them, is developed. To demonstrate the accuracy and effectiveness of the method to be developed herein, five sample problems have been solved. While all the sample problems solved are closed-loop mechanical systems, the method described here need not be confined to closed loop mechanical systems or to mechanical systems at all. In fact, the method is applicable to any system whose motion is to be described, provided adequate constraints can be incorporated into the code by the user. Examples of such systems are electro-mechanical systems with relays, switches, etc. Given the topology of a system, the necessary inputs, the method is capable of computing velocities, positions, accelerations and constraint forces on the system. GRA

FATIGUE MICROCRACK BEHAVIOR UNDER THE INFLUENCE OF SURFACE RESIDUAL STRESSES Interim Report 1 Aug. 1980 - 31 Aug. 1981
John E. Hack and Gerald R. Leverant 30 Oct. 1981 77 p refs
(Contract N00014-78-C-0674)
(AD-A108691) Avail: NTIS HC A05/MF A01 CSCL 20/11

Direct observations of the surface crack opening displacement (SCOD) of surface microcracks (2c to approximately 400 microns) have been made on samples of 4140 and HY-130 steels under both cyclic and static loading conditions. Preliminary observations indicate that small cracks which reside entirely within the zone of shot-peen-induced compressive residual stress remain completely closed, even at applied loads approaching the bulk yield stress in HY-130. Results of SCOD measurements on HY-130 specimens which were cycled in an aqueous 3.5% NaCl solution show a large reduction in SCOD (effective delta K) due to a wedging open of the crack by oxides on the crack faces. As far as we know, the results of these near-threshold, low R-ratio tests represent the first direct observations of oxide wedging effects in microcracks and are consistent with independent data for large crack behavior. Predictions using the analytical approach developed earlier in this program give excellent correlation with experimental observations in 4140 steel in the absence of surface residual stresses. Similar analyses are currently being conducted for HY-130. In addition, a boundary-integral program for the direct calculation of crack face displacements is being used to determine complete crack opening profiles in the presence of a surface residual stress gradient. Author (GRA)

MODELING TECHNIQUES FOR ANALYSIS OF STIFFENED SHELL STRUCTURES, USING COMPUTER PROGRAM ADINA Final Report

Thomas A. Giacofci Nov. 1981 29 p refs
(SF43400001)
(AD-A108728; DTNSRDC-81/070) Avail: NTIS HC A03/MF A01 CSCL 13/3

The beam element available in computer program ADINA is inadequate for transient analysis of eccentrically stiffened shell structures, particularly when the lateral stability of the stiffener is of concern. As an alternative to modeling shell stiffeners with numerous continuum or transition elements, a stiffener modeling technique based on the multipoint constraint option in ADINA is presented. This technique leads to significant reductions in the number of elements and solution degrees of freedom needed for accurate stiffener modeling, yet allows inclusion in the analysis of effects of out-of-plane web distortion, longitudinal warping, and torsion. Stiffeners having various cross sectional geometries and boundary conditions were modeled, and predicted response correlates well with experimental data. The approach is of practical significance for large stiffened shell problems, especially nonlinear analysis. Author (GRA)

EXPLICIT SOLUTION OF THE INVERSE PROBLEM FOR A VIBRATING STRING

Victor Barcilon Nov. 1981 24 p refs
(Contract N00014-76-C-0034; NR Proj. 041-476)
(AD-A108133) Avail: NTIS HC A02/MF A01 CSCL 20/11

The problem of reconstructing the density rho(x) of a vibrating string of length L from the knowledge of two spectra (lambda n)1 to infinity and (microns n) 1 to infinity is considered. The method of construction relies (I) on a formula for rho at an arbitrary point x=l in terms of the spectra (lambda n (l)) 1 to infinity and (microns n (l)) 1 to infinity associated with the natural frequencies of vibration of the portion (l, L) of the original string and (II) on a set of first order differential equations for (lambda n(l))1 to infinity and (micron n (l)) 1 to infinity. The density is deduced by integrating these equations of the spectra and substituting in the above mentioned formula. GRA

DEMONSTRATION OF CRACK GROWTH BY DELAYED HYDROGEN CRACKING IN THE ROLLED JOINTS OF Zr-2.5% Nb PRESSURE TUBES

C. E. Ells and J. H. vanderKuur Mar. 1980 26 p refs In ENGLISH; FRENCH summary
(AECL-6853) Avail: NTIS (US sales only) HC A03/MF A01

Delayed hydrogen cracking in cold-worked Zr-2.5 wt% Nb pressure tubes was examined in rolled-joint assemblies in tests closely simulating the power reactor conditions. The experiments were designed to demonstrate that the tube failures in Pickering were due to delayed hydrogen cracking. Most features of the failures in Pickering were reproduced, and the growth of artificial defects occurred at stress intensity factors and crack velocities quite consistent with both laboratory experiments on small specimens and the experience at Pickering. ELASTIC STRESSES IN U-SHAPED BELLOWS

P. Janzen May 1980 48 p refs
(AECL-6476) Avail: NTIS (US Sales Only)HC A03/MF A01; DOE Depository Libraries

Relations describing the meridional and circumferential elastic stress levels at the root and crown due to external pressure and axial deflection of U-shaped bellows are presented. The derivation is based on a statistical analysis of theoretical data obtained from a finite element analysis of selected bellows configurations. The mathematical formulations and various graphical representations are proposed as aids to bellows design and analysis. DOE

X-RAY MEASUREMENT OF RESIDUAL STRESS IN METALS AT CHALK RIVER NUCLEAR LABORATORIES

J. E. Winegar Jun. 1980 28 p refs
(AECL-6961) Avail: NTIS (US Sales Only)HC A03/MF A01; DOE Depository Libraries

X-ray diffraction was used at CRNL to measure residual stress in metals. The basic principles of stress measurement and factors affecting accuracy of measurement are reviewed. The technique and equipment described were developed at CRNL to give reliable measurements. Accuracy of measurement is achieved by using fixed-count step-scanning and by computer analysis of intensity data using a cubic spline curve smoothing routine. Specific reference is made to the measurement of residual stress in Inconel-600 and Incoloy-800 boiler tubing. Because it measures stress in thin surface layers, the X-ray method can also be used to measure the depth profile of stresses. As there are no standardized procedures for measuring residual stress, this report will be useful both to those unfamiliar with the measurement of residual stress and to those already making such measurements in other laboratories. METHODOLOGY OF UNIAXIAL TRANSIENT VIBRATION TEST FOR SATELLITES Final Report

B. Boissin, A. Girard, and J.-F. Imbert Paris ESA 10 Jun. 1981 20 p refs
(Contract ESTEC-4160/79/NL-AK)
(CNES-81/CT/PRT/SST/SM/194; ESA-CR(P)-1474) Avail: NTIS HC A02/MF A01

Realistic data for thrust transient, launch vehicle, and satellite characteristics are defined. Dynamic response analysis is performed based on a survey of current methods. For most of the low frequency dynamic flight environment of a satellite, transient testing minimizes the risk of under or overtesting inherent to conventional sine testing. As feasibility of such tests on uniaxial electrodynamic shakers was recently proved, the problem is now the dependance of the test specification on possible variations of launch vehicle and satellite dynamic characteristics. Possible variations of parameters are discussed and a sensitivity analysis is performed. It is found that frequency variations have the greatest influence and must be considered simultaneously. A numerical procedure is developed to compute a worst shock spectrum envelope. Alternatives for transient testing are recommended, including an improved shock synthesis technique, compared to sine testing. Author (ESA)

NONLINEAR ELASTIC BEAMS, FRAMES AND STRUCTURAL ANALYSIS [OLINJAERT ELASTISKA BALKAR OCH RAMAR MED ANALYTISKT BESKRIVNA ELEMENTSAMBAND]

Kjell Mattiasson and Lennart Aagaardh 1 Apr. 1978 60 p refs In SWEDISH
(CTH-R-31/1978; ISBN-91-540-2983-X) Avail: NTIS HC A04/MF A01

A rapid calculation method for beams and frames undergoing large deformations, when the relations between force and deformation are nonlinear, but reversible, is discussed. A computer program is described. The use of this method, based on nonlinear beam theory, is subject to the hypotheses: (1) displacements and instability factors, such as buckling, are not accounted for, and (2) the structure is considered to be flat and made of elements assembled together in nodes where the deformations are measured. The method is compared with numerical techniques. The method can be used for the calculation of beams, frames and arches made of steel, aluminum alloys and other strain-hardened materials. RESPONSE OF REINFORCED CONCRETE PLATE-COLUMN CONNECTIONS TO DYNAMIC AND STATIC HORIZONTAL LOADS. APPENDICES E TO H

Denby G. Morrison and Mete A. Sozen Apr. 1981 330 p refs
(Grant NSF PFR-78-16318)
(PB82-101544; Structural-Res-Ser-490-App-E-H; UILU-ENG-8-1-2004-App-E-H; NSF/CEE-81025) Avail: NTIS HC A15/MF A01 CSCL 13B

The response of interior reinforced concrete plate column connections was studied. Variables included reinforcement ratio and the amount of superimposed vertical load. The eight specimens had certain common characteristics. The reinforcement layout in the slab was isotropic. Static tests provide information on the influence of the change in reinforcement ratio and the amount of superimposed vertical load on the response to horizontal loading. An analysis model (the grid model) was developed to interpret the results from the statically tested specimens. The specimens are dynamic tests to obtain data on the response of the specimens, the observed hysteresis, and calculated damping. GRA

EARTHQUAKE RESPONSE OF SEA-BASED STORAGE TANKS BY A HYBRID ELEMENT METHOD-THEORY AND COMPUTER ANALYSIS

Shih-Chi Lee and D. R. Ko Mar. 1981 214 p refs
(Grants NSF PFR-78-09886; NSF PFR-79-19949)
(PB82-104993; DT-7814-2; NSF/CEE-81028) Avail: NTIS HC A10/MF A01 CSCL 13J

An effective method for the linear analysis of dynamic response of submerged underwater oil storage tanks to loadings of earthquake excitations is presented. The tank is axisymmetric in shape and has a flexible wall/roof. A general hybrid-finite element solution procedure was formulated. Contribution from the hydrodynamic interaction to the coupled motion is obtained by solving the Laplace equation with the appropriate boundary conditions, which includes a match to the exterior farfield pressure representation to simplify the computational process. The effects of fluids surrounding and inside the tank are studied. It is demonstrated that these effects are significant to the tank earthquake response analysis. GRA

INELASTIC BEAM BUCKLING EXPERIMENTS

P. F. Dux and S. Kitipornchai May 1981 44 p refs
(PB82-103292; RR-CE24) Avail: NTIS HC A03/MF A01 CSCL 20K

A series of experiments on the buckling of simply supported laterally continuous I beams in the inelastic range are described. Nine beams were tested in three groups of three, each group having a different predominant moment gradient. Points of load application were prevented from moving laterally and twisting. Measurements of geometrical and material imperfections are included in the report. Results of a number of subsidiary experiments such as plastic moment and stub column tests are also presented. The results add to the small amount of test data presently available on such beams and provide a comparison with theoretical predictions. In particular, support is shown for the theoretical curves of Nethercot and Trahair and for the current trend to multiple design curves based on moment gradient. GRA

LOWER BOUND EQUILIBRIUM DESIGN OF SLABS

Reginald G. Smith and M. I. Struct Jan. 1981 46 p refs
(PB82-105263; R-383) Avail: NTIS HC A03/MF A01 CSCL 20K

Collapse moment fields are computed using a 'zero-torsion' orthogonal elastic beam grillage with a flexibility approach. The method is extended to enable slabs of nonuniform thickness and the influence of attached walls and columns to be taken into account. This is achieved by using a stiffness method to evaluate the flexibility coefficients for a beam strip with rotational and linear spring constraints. The simultaneous equations for the patch loading distribution are easily composed by a matrix algorithm and the original difficulty of 'free edges' is catered for by the concept of hypothetical vertical springs of small stiffness. GRA

DISTORTIONAL BUCKLING OF THIN-WEB BEAM COLUMNS

Mark A. Bradford and Nicholas S. Trahair Nov. 1980 60 p refs
(PB82-105271; R-380) Avail: NTIS HC A04/MF A01 CSCL 20K

An approximate finite element method of analysis is developed for the distortional buckling of beam columns of general cross section. The member consists of a flexible web, to which is connected two rigid flange assemblies of arbitrary shape which remain undistorted during buckling. The method permits an economic computer analysis to be made of elastic distortional buckling of members under various conditions of loading, and support and restraint. The method is also used to demonstrate the effects of web distortion on the elastic buckling of lipped channel beams under moment gradient. GRA

DYNAMIC STRUCTURAL ANALYSIS BY ANALOG SIMULATION M.S. Thesis
Leonard M. Napolitano, Jr. Jun. 1981 100 p refs
(PB82-110677; R81-18) Avail: NTIS HC A05/MF A01 CSCL 20K

The derivation of a topologically equivalent electrical analog for a given structure is presented and its use in the analysis of structural dynamics is explored. Starting from simple structural and electrical elements, the models become more complex with the simulation of material and geometric nonlinearities. Two- and three-dimensional truss elements as well as an elemental beam model are developed. The modeling of structural damping and the construction of analogous tuned mass dampers for experimental simulation testing are presented. A trial simulation was run using a newly developed analog computer called a Parity Simulator with excellent results. The advantages of real time simulation as compared to time step digital computerbased simulation as well as future developments in real time simulation are discussed. GRA

ANALYSIS OF UV PROTECTION REQUIREMENTS AND TESTING OF CANDIDATE ATTENUATORS FOR THE HALOE OPTICAL INSTRUMENT
John E. Nealy, William K. Goad, and D. Michele Heath Dec. 1981 29 p refs
(NASA-TM-83247) Avail: NTIS HC A03/MF A01 CSCL 14B

Results of calculations are presented which simulate photolytic processes occurring in HALOE gas calibration cells exposed to extra-terrestrial solar ultraviolet photons. These calculations indicate that significant photolysis takes place in two of the sapphire-enclosed cells over the exposure periods of the proposed mission. A subsequent laboratory investigation is also described in which a high-voltage discharge hydrogen light source is used in conjunction with a vacuum ultraviolet spectrograph. The UV emission from this lamp was used to expose two candidate UV attenuators (ZnSe and coated Ge) to ascertain their suitability as UV filters while maintaining original infrared optical properties. Both materials were found to be effectively opaque to vacuum UV radiaton and suffered no adverse effects regarding their infrared transmissivity. Author

USAGE AND LIMITATIONS OF CHARACTERISTIC VECTOR ANALYSIS OF REMOTE SENSING MULTISPECTRAL DATA FOR THE IDENTIFICATION AND QUANTIFICATION OF WATER QUALITY PARAMETERS Ph.D. Thesis
Theodore A. Talay 1981 394 p
Avail: Univ. Microfilms Order No. 8128308

Characteristic vector analysis is investigated to determine how it resolves total radiance signals measured by a remote sensor into eigenvectors and associated scalar coefficients and their relationships to the identification and quantification of the in situ water constituents. Technique operation is checked against a progression of hypothetical test cases and a limited number of laboratory data sets. Under ideal conditions, characteristic vector analysis has the potential of identifying and quantifying individual constituents in water, even when in mixtures, with a minimum of surface truth data. Exact constituent identification, using characteristic vectors, and quantification, by scaling a scalar coefficients, is possible when the study constituents have a linear radiance concentration relationship, superimpose linearly in mixtures, and the measured radiance spectra are devoid of noise and atmospheric effects. As these conditions are relaxed, technique limitations and inexact solutions are encountered. Dissert. Abstr.

AUTOMATIC RELOCATION OF GROUND CONTROL POINTS IN LANDSAT IMAGERY

A. H. Benny 5 Jun. 1981 37 p refs
(RAE-TR-81071; RAE-Space-598; BR80598) Copyright. Avail: Issuing Activity

A computer program which relocates ground control points (GCP), used in the geometric transformation of satellite pictures is discussed. The GCP's are first located manually on the image and a map. A transformation matrix enables image locations to be converted to map references. For subsequent images, the identity of a first GCP and an indication (not necessarily precise) of its position in the new image enable a spiral search to locate that GCP and then all the others. Accuracy of + or - 0.4 pixel is obtained for LANDSAT pictures. For similar seasons, proportion relocated approaches 100%. In worst cases (6 months difference between images, with snow in the second) 60% is achieved.

AUTOMATED LONGWALL GUIDANCE AND CONTROL VERTICAL CONTROL SUBSYSTEM, VOLUME 1 Final Report

W. Ronald Griffiths, Martin Smirlock, James Aplin, Roger B. Fish, and David Fish 31 Jan. 1982 161 p 2 Vol.
(Contract NAS8-33591)
(NASA-CR-161969; NAS7946-Vol-1) Avail: NTIS HC A08/MF A01 CSCL 08I

A design, fabrication, and implementation of a horizon control of a longwall shearer was performed. This equipment was tested and demonstrated aboveground. This hardware was also installed on a longwall face. The feasibility of providing horizon control for a shearer was demonstrated aboveground. The feasibility of retrofitting the necessary sensors in a survivable manner was demonstrated underground. Subsequent field tests of a specific component, the natural background sensor, at a western location demonstrated the particular usefulness of this device on a wider application basis.

SPECTRAL ALBEDOS OF MIDLATITUDE SNOWPACKS

Bhaskar Choudhury Nov. 1981 41 p refs Submitted for publication
(NASA-TM-83858) Avail: NTIS HC A03/MF A01 CSCL 08L

Spectral albedos of impure-nonhomogeneous snowpacks, typical of midlatitudes, from 400 to 2200 nm were modeled through a numerical solution of the radiative transfer equation in the two-stream approximation. Discrete depth-dependent values of density, grain size and impurity concentration were used to characterize the snowpacks. The model is for diffuse incident radiation, and the numerical method is based on doubling and invariant imbedding. The effect of soot impurities on snowpack albedos is illustrated when a snowpack is several centimeters deep and soot reduces the albedos at visible wavelengths, however, when a snowpack is only a few centimeters deep, soot may increase the albedos at visible wavelengths. By adjusting soot content and snow grain size, good quantitative agreement with some observations at the Cascade Mountains (Washington) and at Point Barrow (Alaska) are obtained; however, the model grain sizes are found to be fifty to four hundred percent larger than the measured values. For satellite snowcover observations, a model for effective albedo of partially snow-covered areas was developed and compared with some NOAA-2 observations of the southeastern United States.

GROUND-TRUTH OBSERVATIONS OF ICE-COVERED NORTH SLOPE LAKES IMAGED BY RADAR

W. F. Weeks Oct. 1981 24 p refs Prepared in cooperation with CRREL, Hanover, N.H.
(NASA-TM-84127; AD-A108342; CRREL-81-19) Avail: NTIS HC A02/MF A01 CSCL 08/8

Field observations support the interpretation that differences in the strength of radar returns from the ice covers of lakes on the North Slope of Alaska can be used to determine where the

lake is frozen completely to the bottom. An ice/frozen soil interface is indicated by a week return and an ice/water interface by a strong return. The immediate value of this result is that SLAR (side-looking airborne radar) imagery can now be used to prepare maps of large areas of the North Slope showing where the lakes are shallower or deeper than 1.7m (the approximate draft of the lake ice at the time of the SLAR flights). The bathymetry of these shallow lakes is largely unknown and is not obvious from their sizes or outlines. Such information could be very useful, for example in finding suitable year-round water supplies.

DEFENSE MAPPING AGENCY DIGITAL DATA BASE EVOLUTION

Francis M. Mirkay Nov. 1981 20 p
(AD-A108327) Avail: NTIS HC A02/MF A01 CSCL 08/2

The Defense Mapping Agency (DMA) has massive amounts of MC&G digital data holdings resulting from programs to support DoD advanced weapons systems and automated map and chart production. The digital data is used to support the DoD and NATO countries as well as internal DMA production. DMA requires a digital data base to maintain, store, retrieve, compare, and report on this MC&G digital data. This paper addresses current DMA efforts that will evolve into an on line interactive, distributed, networked data base system and its associated environment for data handled by HQ DMA and the DMA Production Centers.

ICFITG: A PROGRAM FOR INTERACTIVE CONTOURING FROM AN IRREGULAR TRIANGULAR GRID

Robert F. Brown and Harold Moellering (Ohio State Univ.) Dec. 1981 17 p refs
(AD-A108515) Avail: NTIS HC A02/MF A01 CSCL 08/2

The computer program Interactive Contouring from an Irregular Triangular Grid (ICFITG) allows the program user to make judgements during the preparation or modification of an isarithmic map. This is accomplished interactively through the use of virtual images and devices, character commands and responses, and audio signals such that the cartographer can make decisions that affect the outcome of the final map while the program is executing. It is interactive computer graphics that form the link between the speed and repetitive processing power of the computer and the decision making power of the cartographer. The computer program ICFITG incorporates a contouring algorithm which is based on the formation of an irregular triangular grid. The use of such an algorithm ensures that the original control points lie on the surface and allows provisions to be included that give respect to surface characteristics such as breaklines. Based on research conducted at the Ohio State University, the combination of an irregular triangular grid contouring algorithm and interactive computer graphics results in a fast, flexible and easy to use computer contouring program.

APPLICATIONS OF THE DoD WORLD GEODETIC SYSTEM: THE 1972 CHARTING BY THE USE OF A SEMIAUTOMATED SYSTEM Final Technical Report

Donald Wirak 26 Jan. 1981 13 p refs Presented at the Technol. Exchange Week, Computer Appl. Session, Balboa, Panama, Jan. 1982
(AD-A108326) Avail: NTIS HC A02/MF A01 CSCL 08/5

DMA has a semi-automated system that is used to evaluate the horizontal datum of maps and charts for geodetic accuracy. Geodetic control descriptions in the DMAHTC library of holdings are used to make this evaluation. The computer system gives geodetic shifts to source maps, surveys, and charts. The chart is compiled from a panel base with the WGS-72 shifts applied. The final color proof of the chart is evaluated and checked to see if it is on the WGS-72 datum. Several charts will be exhibited and explained from a cartographic point of view as to how they were placed on WGS-72 datum. The exhibited charts are new charts of the Panama Canal and the Pacific coast of Panama. Examples of how the program was used to improve the geodetic accuracy of the charts on the last stage of compilation will be exhibited.

EXAMINATION OF THE OPERATIONAL PROSPECTS FOR REMOTE SENSING Final Report [EXAMEN DES PERSPECTIVES OPERATIONNELLES DE LA TELEDETECTION]

Eleonora Ambrosetti Paris ESA Dec. 1980 305 p refs In FRENCH
(Contract ESA-4080/79/F-FC(SC))
(ESA-CR(P)-1476) Avail: NTIS HC A14/MF A01

European remote sensing activities are reviewed while development and utilization trends are identified. Existing and planned satellite systems are described. Remote sensing applications are listed by country in the European Economic Community. Cartography, geology, agriculture, silviculture, and land and water resources management are mentioned among other user disciplines. Applications are summarized in three categories: terrestrial, maritime, and coastal. Although maritime and coastal uses of remote sensing data are less well developed than terrestrial applications, economic, social and political benefits which can be accrued by Europe are sure to provide a strong incentive to continuing development. MEASUREMENT OF RIVER SEDIMENTS

1981 69 p refs
(WMO-561; OHR-16; ISBN-92-63-10561-8) Avail: NTIS MF A01; print copy available at WMO, Geneva

Samples and remote sensing techniques for measuring sediment discharge in alluvial rivers are reviewed, noting that the simplest as well as sophisticated methods are not mutually exclusive. It is demonstrated that, in many cases, the optimum means for systematic sediment measurement is a combination of traditional and advanced methods and instruments. Areas where further improvement is needed, e.g., automation and telemetering as well as the international standardization of water pollution aspects of sediment monitoring, are indicated. FLASH FLOOD FORECASTING

A. J. Hall 1981 49 p refs
(WMO-577; OHR-18; ISBN-92-63-10577-4) Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 6

The problem of flash floods is reviewed and basic flash flood forecasting techniques, warning systems, and non-real time solutions to flash flooding are discussed. Data sources for flash flood forecasting are identified, including radar, satellites and quantitative precipitation forecasting. Flash flood forecasting can be based on meteorological, hydrological, meteorological-hydrological or dam break techniques. The design and establishment of flash flood warning systems, ranging from simple networks and procedures to sophisticated computerized automatic systems are described. The success of a flash flood warning system is measured by public response to warnings, the saving of life, and reduction of damage to property. Community involvement is evaluated, indicating the complex interactions among agencies, information dissemination subsystems and the public. Flood plain zoning, and basin management and the construction of engineering works are considered. The limitations and advantages of flood damage reduction measures are also analyzed. Author (ESA)

OBSERVATIONS WITH AN IMAGING 35 GHz RADIOMETER OF TERRAIN IN MALMSLATETT, JULY 1980

Gunnar Stenstroem and Ain Sume Oct. 1981 39 p refs
Original contains color illustrations
(FOA-C-30240-E1/E3) Avail: NTIS HC A03/MF A01

Microwave emission of militarily important terrain was studied, using Dicke radiometer measurements around an air traffic control tower. The radiometer has a 60 cm parabolic Cassegrain antenna, controlled through a desk top computer, which also manages the data sampling and recording. The radiometric images were color-coded and presented on-line on a TV monitor. A selected part of the scenery was monitored once every hour in order to examine time variations of the observed antenna temperature and their correlation with day-to-night and meteorological changes. The significance of reflected, cold sky radiation in smooth surfaces (metals, plastics, roads) is demonstrated, resulting in a contrast with the less reflective surroundings. Author (ESA)

USE OF FLOW-DURATION CURVES TO EVALUATE EFFECTS OF URBANIZATION ON STREAMFLOW PATTERNS ON LONG ISLAND, NEW YORK Final Water-Resources Investigations

Keith R. Prince 1981 25 p refs Prepared in cooperation with Nassau County Dept. of Public Work, N.Y. and Suffolk County Dept. of Health Services, N.Y.
(PB82-114307; USGS/WRD/WRI/81-083;
USGS/WRI-80-114) Avail: NTIS HC A02/MF A01 CSCL 08H

The change of streamflow patterns on Long Island over the last three decades in response to eastward population growth and urbanization was examined. Flow duration curves for nine streams in Nassau and Suffolk Counties indicate that, during this time, streams in urbanized areas increased peak flows and decrease base flows, whereas streams in sparsely populated areas show little or no change. The increase in peak flows reflects the greater volume of storm runoff from impermeable surfaces such as roads, parking lots, and roofs. It is found that the decrease in base flows is a result of the lowering of ground water levels, principally by sanitary sewerage and extensive pumping for public water supply. GRA

SOIL PHYSICAL PROCESSES OF GROUNDWATER RECHARGE THROUGH INDIAN BLACK COTTON SOILS

M. G. Hodnett and J. P. Bell Apr. 1981 40 p refs
(PB82-112137; Rept-77) Avail: NTIS HC A03/MF A01 CSCL 08H

Soil physical studies were carried out in the black cotton soil areas of the Betwa Basin, Central India, to assess their role in partitioning monsoon rainfall into runoff and groundwater recharge. The regional and annual variations of soil moisture were studied first, followed by studies of the soil water flow mechanisms at representative sites. The studies suggested that significant recharge is possible only in the shallow soil areas, where structured clay/silts directly overlie the weathered basalt surface aquifer. GRA

GROUND-WATER RESOURCES OF THE WHITE RIVER BASIN, MADISON COUNTY, INDIANA Final Water-Resources Investigations

Wayne W. Lapham Jun. 1981 122 p refs Prepared in cooperation with Indiana State Dept. of Natural Resources
(PB82-109844; USGS/WRD/WRI/81-084; USGS/WRI-81-35)
Avail: NTIS HC A06/MF A01 CSCL 08H

The ground-water resources of the White River basin in and near Madison County, Indiana were investigated by mapping the aquifers, estimating their hydraulic properties, determining the distribution of potentiometric head in the aquifers, and estimating some of the components of the ground-water budget from data collected in the field. This information was used to construct and calibrate a five-layer, digital ground-water flow model. The model, constructed and calibrated to ground-water level and seepage data collected during the study, simulates conditions for the autumn of 1976. The model was used to provide estimates of ground-water potential in terms of yield, drawdown, and depletion in streamflow. GRA

AN OBSERVATION-WELL NETWORK CONCEPT AS APPLIED TO NORTH CAROLINA Final Water Resource Investigation, 1977 - 1979

M. D. Winner, Jr. Mar. 1981 68 p refs Prepared in cooperation with North Carolina Dept. of Natural Resources and Community Development
(PB82-106089; USGS/WRD/WRI/81-082; USGS-WRI-81-13)
Avail: NTIS HC A04/MF A01 CSCL 08H

A statewide observation well program for North Carolina based on four networks of observation wells with different objectives was proposed. These networks are referred to as (1) climatic effects network; (2) terrain effects network; (3) local effects network, and (4) area effects network. The characteristics of each network are related to natural and manmade stresses in aquifers, and the areas and hydrogeologic units in North Carolina where these networks are needed are identified. A STRESS FUNCTION FOR EVALUATING STRATEGIES FOR WATER QUALITY MANAGEMENT Final Report, Sep. 1977 - Mar. 1980

Warren U. Brigham and Donald L. Hey (Hey, Donald L. and Associates) Sep. 1981 104 p refs
(Grant EPA-R-805614)
(PB82-109828; EPA-600/2-81-217) Avail: NTIS HC A06/MF A01 CSCL 08H

The relationship between biological communities and the physical and chemical conditions in the aquatic environment was investigated. Seasonal patterns and the duration and probability of occurrence of chemical conditions and physical events were established via computer modelling. An instantaneous measure of stress was calculated by summing the decimal fractions of the 96-hr lethal concentrations (for bluegills) of each of 21 separate toxicants. Stress functions were computed for several locations in a test watershed in northeastern Illinois. GRA

A LAND USE ANALYSIS OF EXISTING AND POTENTIAL COAL SURFACE MINING AREAS IN THE OHIO RIVER BASIN ENERGY STUDY REGION

Daniel E. Willard, Michael A. Ewert, Mary Ellen Hogan, and Jeffrey D. Martin Apr. 1981 136 p refs
(Contract EPA-R-805588)
(PB82-105172; EPA-600/7-81-068) Avail: NTIS HC A07/MF A01 CSCL 08I

The land use changes resulting from the surface mining of coal in the Ohio River Basin, which depend on the distribution of the coal, the economic attractiveness of the coal demand, rigor and effectiveness of regulatory mechanisms, and the resilience of the existing ecosystems are reported. The three levels of coal demand assumed are taken from ORBES scenarios.

The study analyzes existing industrial and governmental data on distribution, availability, and extraction of strippable coal. The history of reclamation enforcement and compliance is examined, and several potential land use results of the Federal Surface Mining Control and Reclamation Act of 1977 are analyzed. All of these factors are compared to existing patterns of topography, agriculture, and forestry. GRA

COAL MINE SITING FOR THE OHIO RIVER BASIN ENERGY STUDY
Donald A. Blome Sep. 1981 180 p refs
(Grant EPA-R-805590)
(PB82-108119; EPA-600/7-81-116) Avail: NTIS HC A09/MF A01 CSCL 08I

In part 1, an overview of the ORBES region coal industry is presented. (The region consists of all of Kentucky, most of West Virginia, and substantial portions of Illinois, Indiana, Ohio, and Pennsylvania). Topics include coal production, mine types, reserves, selected coal properties, coal markets, employment, working conditions, wages, and quality of life. In part 2, the procedures for siting coal mines under the ORBES energy development scenarios are set forth. The coal mine siting analysis projects at the county level the number and type of new coal mines that would be opened in the ORBES region through the year 2000 under various scenario conditions and constraints. Among these conditions and constraints are the locational siting pattern of additional power plants in each scenario, the total coal production specified for the year 2000 by the ORBES energy demand model, and the sources of high and low sulfur coal, by mine type, specified by the ORBES coal supply analysis. GRA

SOLAR ENERGY CONTROL SYSTEM Patent

James R. Currie, inventor (to NASA) Issued 8 Dec. 1981 9 p Filed 20 Nov. 1979 Supersedes N80-17544 (18 - 08, p 1023)
(NASA-Case-MFS-25287-1; US-Patent-4,304,219;
US-Patent-Appl-SN-098570; US-Patent-Class-126-422;
US-Patent-Class-126-429; US-Patent-Class-126-430) Avail: US Patent and Trademark Office CSCL 10A

A solar energy control system for a hot air type solar energy heating system wherein thermocouples are arranged to sense the temperature of a solar collector, a space to be heated, and a top and bottom of a heat storage unit is disclosed. Pertinent thermocouples are differentially connected together, and these are employed to effect the operation of dampers, a fan, and an auxiliary heat source. In accomplishing this, the differential outputs from the thermocouples are amplified by a single amplifier by multiplexing techniques. Additionally, the amplifier is corrected as to offset by including as one multiplex channel a common reference signal.

DEVELOPMENT OF THIN WRAPAROUND JUNCTION SILICON SOLAR CELLS Final Report, Sep. 1980 - Nov. 1981
F. Ho and P. A. Iles Nov. 1981 43 p refs
(Contract NAS3-22228)
(NASA-CR-165570) Avail: NTIS HC A03/MF A01 CSCL 10A

The state of the art technologies was applied to fabricate 50 micro thick 2x4 cm, coplanar back contact (CBC) solar cells with AMO efficiency above 12%. A requirement was that the cells have low solar absorptance. A wraparound junction (WAJ) with wraparound metallization was chosen. This WAJ approach avoided the need for very complex fixturing, especially during rotation of the cells for providing adequate contacts over dielectric edge layers. The contact adhesion to silicon was considered better than to an insulator. It is indicated that shunt resistance caused by poor WAJ diode quality, and series resistance from the WAJ contact, give good cell performance. The cells developed reached 14 percent AMO efficiency (at 25 C), with solar absorptance values of 0.73. Space/cell environmental tests were performed on these cells and the thin CSC cells performed well. The optimized design configuration and process sequence were used to make 50 deliverable CBC cells. These cells were all above 12 percent efficiency and had an average efficiency of -13 percent. Results of environmental tests (humidity-temperature, thermal shock, and contact adherence) are also given. E.A.K.

LOW NO SUBx HEAVY FUEL COMBUSTOR CONCEPT PROGRAM. PHASE 1A: COAL GAS ADDENDUM Final Report, 29 Jun. - Oct. 1981
Thomas Rosfjord and Richard Sederquist Jan. 1982 43 p refs
(Contract DEN3-149; DE-AI01-77ET-13111)
(NASA-CR-165577; DOE/NASA/0149-2; GTR-3932) Avail: NTIS HC A03/MF A01 CSCL 10B

The performance and emissions from a rich-lean combustor fired on simulated coal gas fuels were investigated using a 12.7-cm diameter axially-staged burner originally designed for operation with high heating value liquid fuels. A simple, tubular fuel injector was substituted for the liquid fuel nozzle; no other combustor modifications were made. Four test fuels were studied including three chemically bound nitrogen-free gas mixtures with higher heating values of 88, 227, and 308 kj/mol (103, 258 and 349 Btu/scf), and a 227 kj/mol (258 Btu/scf) heating value doped with ammonia to produce a fuel nitrogen content of 0.5% (wt). Stable, ultra-low nitrogen oxide, smoke-free combustion was attained for the nitrogen-free fuels. Results with the doped fuel indicated that less than 5% conversion of NH3 to nitrogen oxide levels below Environmental Protection Agency limits could be achieved. In some instances, excessive CO levels were encountered. It is shown that use of a burner design employing a less fuel-rich primary zone than that found optimum for liquid fuels would yield more acceptable CO emissions. A.R.H.

N82-18691*# National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.
EXPERIMENTAL STUDY OF AN INTEGRAL CATALYTIC COMBUSTOR: HEAT EXCHANGER FOR STIRLING ENGINES
Daniel L. Bulzan 1982 20 p refs Presented at the 1982 Intern. Congr. and Exposition, Detroit, 22-26 Feb. 1982; sponsored by SAE
(Contract DE-AI01-77CS-51040)
(NASA-TM-82783; DOE/NASA/51040-36) Avail: NTIS HC A02/MF A01 CSCL 10A

The feasibility of using catalytic combustion with heat removal for the Stirling engine to reduce exhaust emissions and also improve heat transfer to the working fluid was studied using spaced parallel plates. An internally air-cooled heat exchanger was placed between two noble metal catalytic plates. A preheated fuel-air mixture passed between the plates and reacted on the surface of the catalyzed plates. Heat was removed from the catalytic surface by radiation and convection to the aircooled heat exchangers to control temperature and minimize thermal nitrogen oxide emissions. Test conditions were inlet combustion air temperatures from 850 to 900 K, inlet velocities of about 10 m/s, equivalence ratios from 0.5 to 0.9, and pressures from 1.3x10 to the 5th power to 2.0x10 to the 5th power Pa. Propane fuel was used for all testing. Combustion efficiencies greater than 99.5 percent were measured. Nitrogen oxide emissions ranged from 1.7 to 3.3 g NO2/kg fuel. The results demonstrate the feasibility of the concept and indicate that further investigation of the concept is warranted. A.R.H.

N82-18692*# Lincoln Lab., Mass. Inst. of Tech., Lexington.
GaAs SHALLOW-HOMOJUNCTION SOLAR CELLS Final Report
John C. C. Fan 30 Jun. 1981 52 p refs
(NASA Order C-46566-D)
(NASA-CR-165579) Avail: NTIS HC A04/MF A01 CSCL 10A

The feasibility of fabricating space resistant, high efficiency, light weight, low cost GaAs shallow homojunction solar cells for space application is investigated. The material preparation of ultrathin GaAs single crystal layers, and the fabrication of efficient GaAs solar cells on bulk GaAs substrates are discussed.

Considerable progress was made in both areas, and conversion efficiency about 16% AMO was obtained using anodic oxide as a single layer antireflection coating. A computer design shows that even better cells can be obtained with double layer antireflection coating. Ultrathin, high efficiency solar cells were obtained from GaAs films prepared by the CLEFT process, with conversion efficiency as high as 17% at AMI from a 10 micrometers thick GaAs film. A organometallic CVD was designed and constructed. B.W.

DESIGN, EVALUATION, AND FABRICATION OF LOW-COST COMPOSITE BLADES FOR INTERMEDIATE-SIZE WIND TURBINES Final Report

Oscar Weingart Sep. 1981 210 p refs
(Contracts DEN3-100; DE-AI01-79ET-20320)
(NASA-CR-165342; DOE/NASA/0100-1; SCI-81520) Avail: NTIS HC A10/MF A01 CSCL 10A

Low cost approaches for production of 60 ft long glass fiber/resin composite rotor blades for the MOD-OA wind turbine were identified and evaluated. The most cost-effective configuration was selected for detailed design. Subelement and subscale specimens were fabricated for testing to confirm physical and mechanical properties of the composite blade materials, to develop and evaluate blade fabrication techniques and processes, and to confirm the structural adequacy of the root end joint. Full-scale blade tooling was constructed and a partial blade for tool and process tryout was built. Then two full scale blades were fabricated and delivered to NASA-LeRC for installation on a MOD-OA wind turbine at Clayton, New Mexico for operational testing. Each blade was 60 ft. long with 4.5 ft. chord at root end and 2575 lbs weight including metal hub adapter. The selected blade configuration was a three cell design constructed using a resin impregnated glass fiber tape winding process that allows rapid wrapping of primarily axially oriented fibers onto a tapered mandrel, with tapered wall thickness. The ring winder/transverse filament tape process combination was used for the first time on this program to produce entire rotor blade structures. This approach permitted the complete blade to be wound on stationary mandrels, an improvement which alleviated some of the tooling and process problems encountered on previous composite blade programs. ASSESSMENT OF STEAM-INJECTED GAS TURBINE SYSTEMS AND THEIR POTENTIAL APPLICATION

Robert J. Stochl Feb. 1982 21 p refs
(NASA-TM-82735; E-1047) Avail: NTIS HC A02/MF A01 CSCL 10B

Results were arrived at by utilizing and expanding on information presented in the literature. The results were analyzed and compared with those for simple gas turbine and combined cycles for both utility power generation and industrial cogeneration applications. The efficiency and specific power of simple gas turbine cycles can be increased as much as 30 and 50 percent, respectively, by the injection of steam into the combustor. Steam-injected gas turbines appear to be economically competitive with both simple gas turbine and combined cycles for small, clean-fuel-fired utility power generation and industrial cogeneration applications. For large powerplants with integrated coal gasifiers, the economic advantages appear to be marginal. T.M.

N82-18695*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.

THERMODYNAMIC LIMITS FOR SOLAR ENERGY CONVERSION BY A QUANTUM-THERMAL HYBRID SYSTEM

C. E. Byvik, A. M. Buoncristiani, and B. T. Smith Nov. 1981 20 p refs Prepared in cooperation with Christopher Newport Coll.
(NASA-TM-83229) Avail: NTIS HC A02/MF A01 CSCL 10A

The limits are presented fo air mass 1.5 conditions. A maximum conversion efficiency of 74 percent is thermodynamically achievable for the quantum device operating at 3500 K and the heat engine in contact with a reservoir at 0 K. The efficiency drops to 56 percent for a cold reservoir at approximately room temperature conditions. Hybrid system efficiencies exceed 50 percent over receiver temperatures ranging from 1400 K to 4000 K, suggesting little benefit is gained in operating the system above 1400 K. The results are applied to a system consisting of a photovoltaic solar cell in series with a heat engine. T.M.

These systems have in common two important but not independent features: they can produce a storable fuel, and they are sensitive only to radiant energy with a characteristic absorption spectrum. General analyses of the conversion efficiencies were made using the operational characteristics of each particular system. An efficiency analysis of a generalized system consisting of a blackbody source, a radiant energy converter having a threshold energy and operating temperature, and a reservoir is reported. This analysis is based upon the first and second laws of thermodynamics, and leads to a determination of the limiting or ultimate efficiency for an energy conversion system having a characteristic threshold. THERMODYNAMIC LIMITS TO THE EFFICIENCY OF SOLAR ENERGY CONVERSION BY QUANTUM DEVICES

A. M. Buoncristiani, C. E. Byvik, and B. T. Smith (Christopher Newport College, Va.) Nov. 1981 14 p refs
(NASA-TM-83228) Avail: NTIS HC A02/MF A01 CSCL 10A

The second law of thermodynamics imposes a strict limitation to the energy converted from direct solar radiation to useful work by a quantum device. This limitation requires that the amount of energy converted to useful work (energy in any form other than heat) can be no greater than the change in free energy of the radiation fields. Futhermore, in any real energy conversion device, not all of this available free energy in the radiation field can be converted to work because of basic limitations inherent in the device itself. A thermodynamic analysis of solar energy conversion by a completely general prototypical quantum device is presented. This device is completely described by two parameters, its operating temperature T sub R and the energy threshold of its absorption spectrum. An expression for the maximum thermodynamic efficiency of a quantum solar converter was derived in terms of these two parameters and the incident radiation spectrum. Efficiency curves for assumed solar spectral irradiance corresponding to air mass zero and air mass 1.5 are presented. T.M.

MARKET ASSESSMENT OF PHOTOVOLTAIC POWER SYSTEMS FOR AGRICULTURAL APPLICATIONS IN NIGERIA Final Report

David Staples, Henry Steingrass, and James Nolfi (ARD, Inc., Burlington, Vt.) Oct. 1981 115 p refs
(Contracts DEN3-180; DE-AI01-79ET-20485)
(NASA-CR-165511; DOE/NASA/0180-4; C4100-50) Avail: NTIS HC A06/MF A01 CSCL 10A

The market potential for stand-alone photovoltaic systems in agriculture was studied. Information is presented on technical and economically feasible applications, and assessments of the business, government and financial climate for photovoltaic sales. It is concluded that the market for stand-alone systems will be large because of the availability of captial and the high premium placed on high reliability, low maintence power systems. Various specific applications are described, mostly related to agriculture. R.J.F.

I-V CHARACTERIZATION OF SOLAR CELLS [CARACTERIZ-

ACAO I-V DE CELULAS SOLARES]
Nelson Veissid, R. Ranvaud, and F. J. Fonseca Jun. 1981 12 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador, Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2141-RPE/363) Avail: NTIS HC A02/MF A01

Equivalent circuits were analysed and then I-V characteristics obtained from different solar cells were compared with those from the circuits. The measures were obtained under natural conditions and under artificial conditions (solar simulator made of easily obtained light sources and several filters). The identification of components in the equivalent circuit, together with the theory of photovoltaic conversion, is very important in the optimization of the cell design. A numeric method for determination of the series resistance is proposed. T.M.

ENERGY POLICIES FOR RESILIENCE AND NATIONAL SECURITY Final Report
Amory B. Lovins and L. Hunter Lovins Oct. 1981 322 p refs
(Contract DCPA01-79-C-0317)
(AD-A108263) Avail: NTIS HC A14/MF A01 CSCL 15/3

The vulnerabilities of the U.S. energy system to accidental or deliberate disruptions are analyzed generically and specifically and shown to be disturbingly large. Since they arise from reliance on highly centralized technologies, increasing such reliance is likely to increase national energy vulnerability. A more efficient, diverse, dispersed, renewable energy system is shown to be inherently more resilient, to make major failures impossible, and to be compatible with consistent adherence to free-market principles. FEASIBILITY STUDY ON ENERGY RECOVERY AND COGENERATION FROM AN EXISTING MUNICIPAL INCINERATOR, PHASE 1 Final Report
Jul. 1981 458 p refs
(Contract DE-FG01-79CS-20232)
(DE82-001143; DOE/CS-20232/1) Avail: NTIS HC A20/MF A01

A feasibility study of recovering and converting incinerator waste heat energy into steam and electricity for use in the facility with excess electricity being sold to the local utility was made. Energy recovery would be accomplished by retrofitting each furnace with a waste heat boiler and producing steam for heating and for driving steam turbine electric generators. Preliminary designs economic analyses, and financial plans were prepared. The quantity of municipal refuse was identified and the electric revenues needed for project justification were calculated. For the purpose of obtaining accurate design data, field tests were carried out on the actual refuse and combustion process. DOE

MONITORING OF THERMAL STRATIFICATION OF THE STORAGE TANK OF THE MABEL LEE HALL SOLAR-HOT-WATER FACILITY Final Technical Report, 15 Oct. 1979 - 30 Nov. 1980
E. E. Anderson May 1981 37 p refs
(Contract DE-AC02-79CS-30247)
(DE82-002110; DOE/CS-30247/1) Avail: NTIS HC A03/MF A01

Measurements of temperatures and heat inputs for a large liquid solar storage unit were obtained with sufficient spatial and temporal resolution to permit verification of numerical models. Fourteen tests were conducted on the Mabel Lee Hall solar facility. During each two-day test, forty temperatures and three heat inputs were measured every 15 minutes. All the data were reported to DOE and are available for confirmation of numerical models of liquid solar storage units. Examination of the results of five of the tests including charging, discharging and simultaneous charge-discharge operational modes indicate that stratification was maintaind in the tank. The data also show that several natural circulation modes develop depending upon the manner in which the system was operated. DOE

CALCULATION OF THERMODYNAMIC EQUILIBRIA IN THE CARBONATE FUEL CELL. VOLUME 1. TASK 1: BINARY TERNARY AND QUARTERNARY PHASE DIAGRAMS CONTAINING Li(+), Na(+), K(+), CO3(=), SO3(=) AND OH(-) Final Report
A. D. Pelton, C. W. Bale, P. L. Lin, M. L. Saboungi, and M. Blander 31 Aug. 1981 182 p refs Prepared in cooperation with Argonne National Lab. 2 Vol.
(Contract DE-AC02-79ET-15416)
(DE82-000690; DOE/ET-15416/2-Vol-1) Avail: NTIS HC A09/MF A01

All available phase diagram and thermodynamic data on the eighteen binary systems containing Li(), Na(), K(), SO4(2+), and OH(+) have been collected and critically assessed. A set of self consistent thermodynamic parameters describing the free energies of all known compounds, solid solutions, and liquid solutions in the binary systems has been formulated. The phase diagrams have been calculated, and estimated error limits of all diagrams are given. Fourteen ternary phase diagrams containing Li(), Na(), K(), SO4(2+), CO3(2+) and OH(+) have been calculated from the assessed data for their binary subsystems with the aid of the Conformal Ionic Solution Theory. Comparison with experimental data is made where experimental diagrams are available and small ternary parameters are added where necessary. All calculated ternary phase diagrams are presented as polythermal projections of liquidus surfaces, and estimated error limits are given for each system. DOE

(Contract DE-AC02-79ET-15416)
(DE82-000689; DOE/ET-15416/2-Vol-2) Avail: NTIS HC A04/MF A01

A complete thermodynamic analysis has been performed upon eleven selected fuel feeds obtained after various pretreatment processes. The equilibrium partial pressures of some 34 gaseous species have been computed for each of the fuels at the anode inlet and outlet (75% hydrogen utilization). The complex gaseous equilibria of the fuels have been graphically represented with the aid of Gibbs ternary C-H-O composition triangles. The influence of temperature and pressure upon carbon deposition in the anode compartment has been determined and graphically presented. The effect of water addition upon carbon formation and upon free hydrogen production has been evaluated. The influence of sulfur impurities upon the gaseous equilibria in both electrode compartments and upon the chemical stability of the Ni/NiO electrodes has been assessed. DOE

HIGH-TEMPERATURE, SOLID-OXIDE-ELECTROLYTE FUEL-CELL POWER-GENERATING SYSTEM Quarterly Report, 1 Dec. 1980 - 28 Feb. 1981

22 Mar. 1981 60 p refs
(Contract DE-AC02-80ET-1709)
(DE82-002095; DOE/ET-17089/T2) Avail: NTIS HC A04/MF A01

Porous support tube work was directed at reducing the firing temperature, where electrically heated furnaces that enable better zone temperature control can be utilized. Work on the air electrode for the FEA cell design concentrated on modifying the lanthanum manganite, to enhance its conductivity while matching its thermal expansion to that of the other fuel cell components. The thermal expansion and electrical resistivity of LaO 5CaO 5MnO3 were determined. An initial FBA cell was fabricated. Although its performance was below that of the cells in the series cell stack arrangement, it did prove that fabrication of all fuel cell components (including the interconnection) can be accomplished in this cell design. Analytical measurements on an actual HTSOE cell stack resulted in the use of the differential resistance ((RADIAL)V/(RADICAL)I) to isolate voltage losses under operating conditions, envisaged for the HTSOE fuel cell generator. CYCLE: A GENERAL COMPUTER CODE FOR THERMODYNAMIC CYCLE COMPUTATIONS. STUDIES OF COGENERATION IN DISTRICT HEATING SYSTEMS

J. A. Miedema Sep. 1981 272 p refs
(WTHD-135) Avail: NTIS HC A12/MF A01

Computer programs which determine the energy consumption of heat power units, calculate the energy consumed by large scale district heating systems, compute the energy consumption per unit heat (f factor), and estimate the effect of dual purpose units on energy production/consumption of a regional scale power network were developed. District heating systems were assessed, using the programs. Systems with steam and gas units have lowest f factors. Regional power production efficiency is influenced by dual purpose units. The influence must be calculated for each case separately. Accurate computation of the f factor is urged since it is directly linked to the benefits/cost ratio. Author (ESA)

INDOOR CLIMATE, OUTDOOR CLIMATE, AND ENERGY CONSUMPTION. AN APPROACH TO THE CALCULATION OF THE EFFECT OF THE OUTDOOR AND INDOOR CLIMATE ON THE ENERGY CONSUMPTION IN BUILDINGS, BASED ON METHODS OF STATISTICAL ANALYSIS

A. H. C. vanPaassen Oct. 1981 123 p refs
(WTHD-137) Avail: NTIS HC A06/MF A01

Mathematical models of the thermal system were developed, including the thermal behavior of the building, the outdoor climate and the heating, ventilation and air conditioning (HVAC) system. The thermal behavior of the building is characterized by the response factor method. A stochastic model describes outdoor climate characteristics. A short reference year, consisting of data from 16 days/season, is used as a standard input data set for hour by hour simulations of thermal systems associated with the building. Yearly energy consumption is determined by combining a probability matrix, based on the statistical properties of the weather, with an energy matrix, found by calculating the energy consumption of the HVAC system for all possible combinations of the temperature and humidity of the outdoor air and the load of the building. Results agree closely with measured values and computing time is greatly reduced. Author (ESA)

RAILWAY TRANSPORT OF LOW TEMPERATURE HEAT FROM LARGE POWER STATIONS BY MEANS OF ALTERNATIVE HEAT CARRIERS AND WATER Final Report

Gerardus Luchtman and Theo Bracke Bonn Bundesministerium fuer Forschung und Technology Nov. 1981 165 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-145; ISSN-0340-7608) Avail: NTIS HC A08/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 32,60

The feasibility of railway transport of liquid and solid heat carriers in tank cars so as to replace pipeline transport of small to medium large heat loads was investigated. The typical characteristics of railway transport were analyzed and all essential technical and economical variables were integrated in a transport model. Over 1000 complex chemical compounds were evaluated for their suitability as heat carriers. Of these, three ammonia compounds are considered as promising. Considering, however, that complicated and expensive facilities are needed for heat transfer to and from ammonia, water is identified as the better choice. Results, based on 1975 transport prices, show that railway heat transport becomes competitive for heat loads above 50 to 100 MW and transport distances over 20 km. Author (ESA)

MODEL OF SEASONAL HEAT STORAGE Final Report

Wilhelm Adae and Dieter Striebel Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 237 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-176; ISSN-0340-7608) Avail: NTIS HC A11/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 40,30

A model of the thermal behavior of large flat seasonal storage reservoirs which includes all parameters influencing the temperature distribution was developed and compared with experiment in order to provide a comprehensive basis for the dimensioning and design of displacement storage reservoirs. Heat transfer by conduction and by various convective flows at the side walls and the fluid surface were included in a numerical one-dimensional model of the stagnant reservoir and the results were compared with measured temperature distributions. The influence of charging and decharging on the stability of the thermocline was investigated by visualization of the flow and mixing processes and by temperature measurements. Model calculations of the mixing losses indicate that the mixing is nearly compensated by conduction when the reservoir charging time exceeds 1000 hr approximately. Author (ESA)

CONSTRUCTION AND OPERATION OF A ONE TON PER HOUR PILOT PLANT FOR THE VEW COAL CONVERSION PROCESS Final Report, Feb. 1981

Juergen Poller Bonn Bundesministerium fuer Forschung und Technology Nov. 1981 57 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-177; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 12,20

The pilot plant is based on airblown partial gasification in an entrained reactor. Results show that at temperatures of about 1450 C, 55% to 65% of the feed coal, and 70% to 80%

of the sulfur can be converted into product gas. The quality of the low BTU gas is sufficient for application in the combined gas-stream turbine process. Extensive knowledge is also gained concerning gas accompanying pollutants and the behavior of different brickwork materials in the reactor environment. The acquired data allows proper dimensioning of a prototype plant.

A 100 kWe SOLAR THERMAL POWER PLANT IN KUWAIT, PHASE 1 Final Report, Jun. 1980

Guenther Schmidt, Peter Schmid, Dietmar Wolf, and Helmut Zewen Bonn Bundesministerium fuer Forschung und Technology Oct. 1981 47 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-178; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10,10

The assembly and test program of the main system components of the solar thermal power station are described. The installation is of the solar farm type and uses highly concentrating rotational symmetric paraboloid mirrors to achieve high efficiencies and Rankine cycle operating temperatures as high as 350 C. The working medium is toluene. Performance tests show proper functioning of the tracking system of the collectors, of the coneshaped absorbers and of the energy conversion system, including all control loops. Author (ESA)

N82-18714# Maschinenfabrik Augsburg-Nuernberg A.G., Munich (West Germany).

CONSTRUCTION AND TESTING OF A TEST STAND FOR SOLAR CELLS AND CONCENTRATING COLLECTORS Final Report, Apr. 1980

Heinz Pfeiffer Bonn Bundesministerium fuer Forschung und Technology Nov. 1981 131 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-179; ISSN-0340-7608) Avail: NTIS HC A07/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 27,70

A hibrid system consisting of photovoltaic cells and parabolic concentrators was built and tested in order to study the possible cost reduction of photovoltaic systems by concentration of sunlight. The test stand comprises four parabolic tracking reflectors, a cooling circuit, electrical and thermodynamical instrumentation and an electrical water pump as a load. The solar cells are mounted in the focal line of the collectors on a cooling channel designed for optimal heat transfer and their uniform illumination is carefully adjusted. The photovoltaic generator delivers electrical energy with 9.3% efficiency at 25 C. In the hybrid regime the thermal efficiency attains 45% at a temperature of 90 C, and the electrical efficiency 6%. Author (ESA)

DEVELOPMENT OF SELECTIVE SOLAR ABSORBERS ON THE BASIS OF ALUMINUM ROLL-BOND HEAT EXCHANGERS Final Report, Jun. 1980

Manfred Moeller Bonn Bundesministerium fuer Forschung und Technology Nov. 1981 44 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-183; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9,25

A deposition technique comparable to two-stage anodizing and especially suited for solar absorber panels, using roll-bond Al 99.5 and AlMnZr alloys as a substrate, was developed. The coating is of the nickel structure filter type and provides average solar absorptivity values of 94% and thermal emission values of 14%. The setup of a production plant capable of coating surfaces up to 2 sq m is described as well as the development of corrosion resistent hermetically sealed collectors. By means of an appropriate surface treatment the same corrosion resistance was achieved for absorbers mounted in ventilated collectors. Author (ESA)

N82-18716# Metallgesellschaft, A.G., Frankfurt am Main (West Germany). Metall-Lab.

AIRTIGHT COLLECTOR CASINGS Final Report

Manfred Moeller Bonn Bundesministerium fuer Forschung und Technology Oct. 1981 71 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-184; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 15,20

The gas space between absorber and cover plates is hermetically sealed by means of a permanent elastic seal of the polysulfide or polyisobutylene type. The absorber-glass bond fits into a special frame to be manufactured and mounted industrially for easy assembly with titanium-zinc roof structures. The latter is made of prefabricated parts that can easily be joined by soldering. Adequate protection against penetration of rain, water, snow, and dust is provided for. The flat roof mounting is so designed that no boring through the cover is needed for fixing. Test results show high efficiency and long service life.

DEVELOPMENT OF SELECTIVE SOLAR ABSORBERS ON THE BASIS OF ALUMINUM ROLL-BOND HEAT EXCHANGERS Final Report, Dec. 1979

Werner Scherber and Bernhard Schroeder Bonn Bundesministerium fuer Forschung und Technology Oct. 1981 105 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-186; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 22,30

A deposition technique for selective coatings akin to two-stage anodizing and especially suited for aluminum solar absorber panels was developed. The coating consists of tiny, velvet-like arranged nickel whiskers and provides a solar absorptivity as high as 94% and a low thermal emissivity of 12% to 17%. The coating technique, the production setup, and the test program are described. The coating proves to be resistent to humidity cycle testing and may be used in ordinary ventilated collectors. After production in a pilot production plant of about 10,000 roll-band panels with outstanding optical quality, homogeneity and long-term stability, a series production plant with a 7 m bath length was started. DEVELOPMENT AND TESTS OF EXPERIMENTAL SOLAR GENERATORS FOR CONCENTRATING SYSTEMS Final Report, Mar. 1981

Hans Gochermann and Hubert Muehle Bonn Bundesministerium fuer Forschung und Technology Oct. 1981 34 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-193; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7,20

Terrestrial photovoltaic generators were developed for integration into a hybrid system designed to demonstrate cost reduction of photovoltaic systems by concentration of sunlight. The photovoltaic cells consist of monocrystalline silicon, n-p type, 5 by 5 sq cm large and 0.35 mm thick. The antireflection layer is made of TiOx and the contact system of passivated Ti(Pd)Ag. Usage of low ohmic materials and decrease of contact resistance by deeper n-diffusion allows for maintaining cell efficiency almost constant for intensities up to 0.2 W per sq cm. The layout of several hybrid systems using parabolic reflectors is given and the mounting of the solar cells is illustrated. Author (ESA)

A TWO DIMENSIONAL STUDY OF THE MAXIMUM POWER THAT CAN BE OBTAINED FROM A WIND TURBINE IN A WIND SHEAR LAYER

Bo C. A. Johansson Apr. 1981 59 p refs
(FFA-134; ISSN-0081-5640) Avail: NTIS HC A04/MF A01; Aeronautical Research Inst. of Sweden, Stockholm Kr 70

Betz's stream tube theory for the maximum power that can be obtained from a wind turbine in a uniform flow is extended to two dimensions. The undisturbed velocity field (allowed to vary arbitrarily vertically) and the location of the wind turbine are given. The maximum power is calculated by calculus of variations. For common wind velocity profiles, the maximum power is only slightly larger than the power, which is obtained by a constant relative wind speed retardation equal to Betz's retardation, while for a linear velocity profile there is a considerable difference. Author (ESA)

MEASUREMENTS OF WAKE INTERACTION EFFECTS ON THE POWER OUTPUT FROM SMALL WIND TURBINE MODELS

Per-Henrik Alfredsson and Jan-Aake Dahlberg 4 Jul. 1981 62 p refs
(Contracts NE-5061-013; NE-5061-014)
(FFA-TN-HU-2189-Pt-5; ISSN-0081-5640) Avail: NTIS HC A04/MF A01

Power interference between two and three wind turbine models in a wind tunnel at four different ambient turbulence conditions was measured in order to assess turbine drag effects. Maximum power coefficient is 0.35 with a corresponding thrust coefficient of 0.85 at a tip speed ratio of 4. Flow visualization with small spacing between the turbines (2 x D) and power interaction measurements show that the presence of a downstream turbine affects the upstream turbine wake. By traversing a turbine across the wake of an upstream turbine, a chart of constant power lines (iso power lines) was established for the four ambient flow conditions. The power measurements in the wake can be used to estimate the overall efficiency of a limited array of wind turbines. Author (ESA)

ICING PROBLEMS FOR WIND TURBINES. SUMMARY OF STUDIES PERFORMED DURING WINTER SEASON 1980/81

Anders Gustafsson, Tord Kvick, and Staffan Meijer (Swedish Meteorological and Hydrological Inst.) 6 Oct. 1981 30 p refs
Prepared in cooperation with Sydkraft AB
(Contract NE-5061-014)
(FFA-TN-HU-2262-Pt-4) Avail: NTIS HC A03/MF A01

The significance of an ice detector signal which shuts down a wind energy conversion system, not equipped with deicers, was studied. Correlations between the detector signal, meteorological parameters and ice buildup on the blades were investigated. Theoretical and field study data were used. Visual checks followed icing signals but little ice was observed since icing mostly occurred at night. The data are inadequate to enable conclusions to be drawn. Time lag between signals and visual observation must be shortened. Data must be collected when icing is expected, even if there is no signal. Author (ESA)

EVALUATION OF RESIDENTIAL AND COMMERCIAL SOLAR/GAS HEATING AND COOLING TECHNOLOGIES, VOLUME 2 Final Report, Dec. 1979 - Jan. 1981

Alan S. Hirshberg, Steven A. Haas, and Alan S. Jacobsen Dec. 1980 287 p 2 Vol.
(Contract GRI-5014-345-0280)
(PB82-103854; GRI-79/0105.2) Avail: NTIS HC A13/MF A01 CSCL 13A

The economics of the most cost-effective solar/gas hybrid systems against a range of advanced gas-fired space conditioning equipment, including both conventional gas furnaces and pulse combustion gas furnaces were analyzed. In addition, the economic comparison considered improvements in performance and cost reduction for both solar/gas systems and advanced gas-fired equipment. GRA

CRITERIA FOR THE INSTALLATION OF ENERGY CONSERVATION MEASURES Final Report

Heinz R. Trechsel and Shelia J. Launey (DOE, Washington, D.C.) Jul. 1981 207 p refs Sponsored in part by DOE, Washington, D.C.
(PB82-104712; NBS-SP-606; LC-81-600055) Avail: NTIS HC A10/MF A01 CSCL 13A

Standard installation practices were developed to assist in assuring the effectiveness and safety of energy conservation measures. The criteria are being used by DOE to develop training manuals for installers, inspectors, and energy auditors. Issues that were considered in the development of the standards: moisture and building retrofit, attic ventilation, electrical wiring, recessed and surface-mounted fixtures, the use of diagnostic tools (infrared thermography, air change rate, and window air leakage measurements), and product certification are discussed. The products covered are loose-fill, batts and blankets, rigid foam boards, UF foam and reflective insulations, window devices, caulks and sealants, water heater insulation, oil burner replacements, and vent dampers. GRA

PERFORMANCE OF THE NORRIS COTTON FEDERAL OFFICE BUILDING FOR THE FIRST 3 YEARS OF OPERATION Final Building Sciences Series
James E. Hill, William B. Mey, Jr., Thomas E. Richtmyer, Jacqueline Elder, Robert L. Tibbott, Gary T. Yonemura, Charles M. Hunt, and Phillip T. Chen Aug. 1981 143 p refs Sponsored in part by DOE, Washington, D.C.
(PB82-105487; NBS-BSS-133; LC-81-600082) Avail: NTIS HC A07/MF A01 CSCL 13A

The Norris Cotton Federal Office Building, designed to demonstrate a number of energy saving concepts, is discussed. Some of the major energy conserving features of the building are the use of solar collectors; heavy masonry construction with exterior insulation; small overall window area; heat recovery from heat pumps, chillers, a natural gas-powered engine/generator, and the ventilation system; modular boilers; thermal storage tanks; and a variety of energy conserving lighting systems. GRA

FEDSOL: PROGRAM USER'S MANUAL AND ECONOMIC OPTIMIZATION GUIDE FOR SOLAR FEDERAL BUILDING PROJECTS Final Report
Jeanne W. Powell and Richard C. Rodgers, Jr. Aug. 1981 113 p refs Prepared in cooperation with Rodgers (Richard C.), Jr. Sponsored in part by DOE
(PB82-107012; NBSIR-81-2342) Avail: NTIS HC A06/MF A01 CSCL 13A

A user's manual for the FEDSOL computer program is provided. The FEDSOL program determines the economically optimal size of a solar energy system for a user-specified building, location, system type, and set of economic conditions; it conducts numerous breakeven and sensitivity analyses; and it calculates measures of economic performance as required under the Federal Rules. The economic model in the program is linked with the SLR (solar load ratio) design method developed to predict the performance of active systems. The economics portion of the program can, however, be used apart from the SLR method, with performance data provided by the user. Author

EMISSIONS AND EFFICIENCY PERFORMANCE OF INDUSTRIAL COAL STOKER FIRED BOILERS Final Report, Aug. 1977 - Nov. 1979
P. L. Langsjoen, J. O. Burlingame, and J. E. Gabrielson Jul. 1981 347 p refs Prepared in part by American Boiler Manufacturers Association
(Contracts EPA-IAG-D7-E681; EF-77-C-01-2609)
(PB82-115312; EPA-600/7-81-111A) Avail: NTIS HC A15/MF A01 CSCL 13A

Measurements of 18 coal stoker boilers including spreader stokers, mass fired overfeed stokers, and mass fired underfeed stokers are reported. Particulate loading is largely dependent on stoker type and degree of flyash reinjection. It increases with heat release rate, but can be controlled with proper use of overfire air in many cases. Nitric oxide increases with excess air and grate heat release rate. Overfire air, as it exists in current boiler designs, does not affect NOx. Relationships between operating variables and measured emissions and efficiency are also reported. GRA

INDUSTRIAL BURNER AND PROCESS EFFICIENCY PROGRAM Annual Report, Jan. - Dec. 1980
S. R. Huebner and S. N. Prakash Mar. 1981 96 p refs
(GRI Proj. 5011-342-0148)
(PB82-115486; GRI-80/0059; Rept-1228) Avail: NTIS HC A05/MF A01 CSCL 13A

A laboratory prototype burner which is compatible with a FM (frequency modulation) combustion control system where temperature control is accomplished by regulating the ratio of burner on-time to burner off-time was developed. This multifuel (natural gas and No. 2 fuel oil) high velocity burner is capable of repeated pulse ignition at maximum rated capability (1 million Btu-hour) with preheated air (from ambient to 1100F). A digital control in the FM mode was developed. Experimental data from tests in a laboratory furnace indicated that when applied to a batch type thermal process where appreciable turndown is presently obtained by excess air operation, the FM combustion system provides improvements in process fuel efficiency and gains in productivity. ENERGY CONSUMPTION PATTERNS: ILLINOIS, INDIANA, KENTUCKY, OHIO, PENNSYLVANIA, AND WEST VIRGINIA (1975)
James P. Hartnett and Jan L. Saper Apr. 1981 80 p refs
(Grant EPA-R-805588)
(PB82-101478; EPA-600/7-81-066) Avail: NTIS HC A05/MF A01 CSCL 10A

Energy consumption data for the year 1975 for the states of Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia, as well as for the United States as a whole is presented. Energy use is examined both by consuming sector and by fuel source. The principal components of each sector are described briefly, and detailed comparisons are made among national, six-state, and individual state consumption patterns for 1975. Preliminary estimates are given for total energy consumption in the United States, the six states, and individual states for the years 1976, 1977, and 1978. GRA

ENERGY CONSUMPTION IN THE OHIO RIVER BASIN ENERGY STUDY REGION, 1974, BY END USER AND FUEL TYPE

Walter P. Page Apr. 1981 66 p refs Prepared in cooperation with Ohio River Basin Energy Study
(Grant EPA-R-805585)
(PB82-104811; EPA-600/7-81-048) Avail: NTIS
HC A04/MF A01 CSCL 10A

Energy consumption as of 1974 is calculated for the Ohio River Basin region (substantial parts of Illinois, Indiana, and Ohio, all of Kentucky, most of West Virginia, and southwestern Pennsylvania). Substate energy consumption information is obtained at the Bureau of Economic Analysis (BEA) level and aggregated across BEA areas for an approximation to the Ohio River Basin Energy Study (ORBES) region; a set of factors is applied to allocate partial BEA area energy consumption to the ORBES portion of a given BEA area. Comparisons also are made between regional energy consumption and energy consumption in the six-state area and the United States. GRA

LIMS INSTRUMENT PACKAGE (LIP) BALLOON EXPERIMENT: NIMBUS 7 SATELLITE CORRELATIVE TEMPERATURE, OZONE, WATER VAPOR, AND NITRIC ACID MEASUREMENTS

Robert B. Lee, III, Bruce W. Gandrud (National Center for Atmospheric Research), Donald E. Robbins (NASA. Johnson Space Center), Laurence C. Rossi (NASA. Wallops Flight Center), and Nigel R. W. Swann (National Physical Lab., London) Feb. 1982 41 p refs
(NASA-TM-83259) Avail: NTIS HC A03/MF A01 CSCL 13B

The Limb Infrared Monitor of the Stratosphere (LIMS) LIP balloon experiment was used to obtain correlative temperature, ozone, water vapor, and nitric acid data at altitudes between 10 and 36 kilometers. The performance of the LIMS sensor flown on the Nimbus 7 Satellite was assessed. The LIP consists of the modified electrochemical concentration cell ozonesonde, the ultraviolet absorption photometric of ozone, the water vapor infrared radiometer sonde, the chemical absorption filter instrument for nitric acid vapor, and the infrared radiometer for nitric acid vapor. The limb instrument package (LIP), its correlative sensors, and the resulting data obtained from an engineering and four correlative flights are described. E.A.K.

GAS-SURFACE INTERACTIONS IN CRYOGENIC WHOLE AIR SAMPLING Final Report, 1 Nov. 1976 - 31 Mar. 1980

J. M. Calo, R. J. Fezza, and E. J. Dineen May 1981 418 p refs
(Contract F19628-77-C-0071; AF Proj. 6687)
(AD-A108255; AFGL-TR-81-0162) Avail: NTIS
HC A18/MF A01 CSCL 20/12

Physico-chemical phenomena associated with in-situ cryogenic whole air sampling of stratospheric species are examined. Condensation phenomena on disks of various materials, cooled by a mechanical, helium cycle refrigerator, and subsequent thermal desorption behavior were studied using quadrupole mass spectrometry and NO chemiluminescence. Strong, spurious 'first' condensations in the 200-250 K temperature range were observed. This phenomenon is attributed to water vapor contamination of the surface resulting in supersaturation and condensate growth initiation by surface nucleation. Desorption spectra of binary cryofrosts and of the pure components revealed significant levels of interaction between species in the cryofrost. These results preclude chromatographic cryo-fractionation as a reliable technique for whole air sample and analysis. Reactions which occur during cryofrost regeneration were studied via temperature programmed and flash desorption. Surprisingly persistent disproportionation of NO occurred with conversions of nearly 50 percent upon desorption of NO containing cryofrosts. Rapid ozone recombination and oxidation of NO to NO2 by ozone are also reported. GRA

INVESTIGATION ON AIR SAMPLES FROM THE SUBMARINE SJOEHUNDEN, AUGUST 1979 [UNDERSOEKNING AV LUFTPROVER FRAAN UBAATEN SJOEHUNDEN, AUGUSTI 1979]
L.-H. Andersson, A. Braend-Persson, B. Gelin, A. Linnarson, and G. Ringqvist Oct. 1981 61 p refs In SWEDISH
(FOA-C-54035-H1) Avail: NTIS HC A04/MF A01

Hydrocarbon and aerosol concentrations in a submarine during a dive were investigated. Oil particles and gaseous hydrocarbons, due to an oil leak and kitchen fumes, were detected. Heavy metals did not occur, except small amounts of copper and zinc. In some cases fibers were found, possibly asbestos. In many cases textile fibers were found. In most of the filters, carbon particles and traces of evaporated seawater were present. The submarine atmospheric dust content is not dangerous to the crew's health. Author (ESA)

INVESTIGATIONS ON AIR SAMPLES FROM THE SUBMARINE NAECKEN, AUGUST 1980 [UNDERSOEKNING AV LUFTPROVER FRAAN UBAATEN NAACKEN, AUGUSTI 1980]
Aasa Braend-Persson, Allan Linnarson, and Goesta Ringqvist Oct. 1981 37 p refs In SWEDISH
(FOA-C-54036-H1) Avail: NTIS HC A03/MF A01

Hydrocarbon pollution of the atmosphere in a submarine was investigated, and aerosol density was measured. A small oil leak was noticed as well as intake of diesel exhaust during snorkelling. The hydrocarbon concentration was low; provided these components are limited to hydraulic fluids, lubricating oils, or kitchen fumes, the recorded concentration probably is not dangerous to health. Dust particle density is lower than that of a house. Author (ESA)

AN EQUILIBRIUM MODEL FOR THE PARTITIONING OF SYNTHETIC ORGANIC COMPOUNDS: FORMULATION AND CALIBRATION
Brian J. Eadie May 1981 47 p refs
(PB82-116682; NOAA-TM-ERL-GLERL-35; NOAA-81081903) Avail: NTIS HC A03/MF A01 CSCL 06F

An equilibrium toxic organic distribution model has been designed. This simple model, needing only information on the contaminants, water solubility, and vapor pressure, yields useful information on the distribution of environmentally persistent organic contaminants. The model was calibrated for total DDT in three ecosystems: a representative coastal regime, Lake Michigan, and a global system. There are some discrepancies between model output and available data; while the model calibrated well for the coastal regime and the Lake Michigan ecosystem, it failed for the global ecosystem. This is presumably because of the uneven application of DDT and the large biomass of terrestrial plants, which are relatively uncontaminated. Owing to its low vapor pressure, DDT has not and will not come to a global equilibrium. GRA

ASSESSMENT OF FUTURE ENVIRONMENTAL TRENDS AND PROBLEMS: INDUSTRIAL USE OF APPLIED GENETICS AND BIOTECHNOLOGIES Final Report
Robert H. Zaugg and Jeff R. Swarz Sep. 1981 169 p refs
(Contract EPA-68-02-3638)
(PB82-118951; EPA-600/8-81-020) Avail: NTIS HC A08/MF A01 CSCL 06C

The proposed study is to be a technological assessment of genetic engineering as it applies to commercial industries and its potential effects on the environment. This includes a detailed literature review and state of the art analysis of genetic engineering, an analysis of how applied genetics will affect public health and public welfare, its probable impact on the environmental policies and an analysis of knowledge gaps, including identification of inadequacies of analytical methods and techniques. Additionally, the socioeconomic impact of genetic engineering on commercial industry will be examined. The approach will include a literature review of five key industrial sectors: Pharmaceutical and Cosmetic, Industrial Chemical, Energy, Food Manufacturing and Preservation, and Mining. Areas that will be examined at length include: Environment and Populations, Government Policy, and Technology. GRA

N82-18751# Radian Corp., Austin, Tex.
ENVIRONMENTAL ASSESSMENT, SOURCE TEST AND EVALUATION REPORT: LURGI (KOSOVO) MEDIUM-Btu GASIFICATION Final Report, Mar. 1976 - Mar. 1981
K. W. Lee, W. S. Seames, R. V. Collins, K. J. Bombaugh, and G. C. Page Aug. 1981 325 p refs
(Contracts EPA-68-02-3137; EPA-68-02-2147)
(PB82-114075; EPA-600/7-81-142) Avail: NTIS HC A14/MF A01 CSCL 13B

An environmental data acquisition program involving a commercial scale, medium Btu, Lurgi gasification plant in the Kosovo region of Yugoslavia is described. The objective of the program was to characterize potential environmental problems associated with coal gasification in a Lurgi plant. The primary conclusion of the environmental assessment mode is that the process exhibits a significant potential for pollution. All discharge streams are potential vehicles for pollutant transfer from the process to the environment. The streams with the highest priority for control based on their potential for adverse health effects in the three discharge media, are the H2S rich waste gas, phenolic wastewater, and heavy tar. GRA

EMISSIONS ASSESSMENT OF CONVENTIONAL STATIONARY COMBUSTION SYSTEMS: SUMMARY REPORT Final Report, Sep. 1976 - Jul. 1981
C. C. Shih and A. M. Takata Sep. 1981 77 p refs
(Contract EPA-68-02-2197)
(PB82-109414; EPA-600/7-81-003D) Avail: NTIS HC A05/MF A01 CSCL 13B

Results of a characterization of multi-media emissions from 39 source categories of conventional stationary combustion systems are reported. In the assessment, existing emissions data were first examined to determine the adequacy of the data base. This was followed by a measurement program to fill identified data gaps. Emissions data obtained from the sampling and analysis program were combined with existing emissions data to provide estimates of emission levels, and to define the need for additional data. Study results indicate that flue gas emissions of NOx, SO2, and particulate matter from the 39 source categories account for approximately 86, 66, and 36%, respectively, of the emissions of these pollutants from all stationary sources. Additionally, flue gas emissions of sulfates and several trace elements from coal- and oil-fired combustion sources also require further attention. GRA

EFFECT OF OXIDATION OF SOIL ORGANIC MATTER ON WATER QUALITY: ROLE OF NITRIFICATION AND DENITRIFICATION
Robert L. Tate, III and Richard E. Terry Apr. 1981 94 p refs
(Contract DI-14-34-0001-9063;OWRT Proj. B-041-FLA)
(PB82-103946; W81-05354; OWRT-B-041-FLA(2)) Avail: NTIS HC A05/MF A01 CSCL 08M

Since mineral nitrogen produced in Histosols has a significant effect on regional water quality, nitrification and denitrification and the effect of the physical and chemical environment on these reactions were studied in Pahokee muck, a drained Histosol. Highest potential denitrification rates were detected in cultivated fields. These rates were about 3-fold that of a soil from a fallow field. Nitrite accumulated in low concentrations in the soils as a result of denitrification. Denitrification was limited by carbon in uncultivated soils, but not in the soils from the sugarcane or grass fields. Oxygen was limiting to denitrification in drained soils since during flooding the denitrification capacity and denitrification populations increased, while soil nitrate levels decreased about 80 percent. Performance tests were conducted at an oil and hazardous simulated environmental test tank on four commercial oil spill cleanup devices: the Sapiens Sirene skimming system, the Oil Mop remote skimmer, the Troll/Destroll skimming system, and the Versatile Bennett arctic skimmer. The objective of the test program was to evaluate skimmer performance in collecting oil floating on water using several wave conditions, tow speeds, and skimmer operating parameters. Author

INVENTORY OF EMISSIONS FROM MARINE OPERATIONS WITHIN THE CALIFORNIA COASTAL WATERS Final Report
W. C. Kelly, L. R. Reckner, and G. D. Maines 26 Jun. 1981 222 p refs
(Contract ARB-A6-209-30)
(PB82-105099; Rept-2581-01-0681; ARB-R-81/40) Avail: NTIS HC A10/MF A01 CSCL 13B

The magnitude of air polluting emissions from marine vessels and marine related activities in the coastal waters and ports of California is studied. Major sources of emissions included the operation of marine engines and auxiliary power plants; the transport, handling, storage and transfer of petroleum and petroleum products, and the ballasting and lightering associated with tanker vessel operations. The record of activity of every commercial vessel operating in the waters of California was traced and the emissions were calculated for each activity of these vessels. The average daily emissions were - NOx 41.4 tons per day (tpd), CO 8.3 tpd, SO2 79.2 tpd, hydrocarbons 21.5 tpd, and particulates 7.6 tpd. GRA

STUDY OF AUTOMATIC CONTROL SYSTEM TO MAINTAIN CONSTANT PERCENTAGE SO2 RETENTION IN A PRESSURIZED FBC Final Report, Sep. 1979 - Dec. 1980
K. J. Daniel, S. D. Finnigan, and R. M. Reinstrom Sep. 1981 174 p refs
(Contract EPA-68-02-3131)
(PB82-110693; EPA-600/7-81-154) Avail: NTIS HC A08/MF A01 CSCL 13B

The Clean Air Act amendments of 1977 indicate that future emission standards for SO2 should be based on a percentage reduction (comparing sulfur emissions with sulfur feed). In a PFB, sulfur feed (coal sulfur content, feed rate) and sulfur removal effectiveness (sorbent reactivity, feed rate) vary continually during operation. A transient model of a PFB plant was developed, validated, and used to assess automatic control options. The preferred control option identified in the assessment would continuously monitor the sulfur content in the feed coal, and would adjust the sorbent feed rate to maintain a constant sorbent-calcium/coal-sulfur-feed ratio. Such a system would minimize, but not eliminate, the need for excess sorbent feed to ensure that the PFB did not exceed the specified percentage SO2 reduction on a 30-day average. GRA

GROUND-WATER FOR THE SALT BASIN, EAGLE FLAT, RED LIGHT DRAW, GREEN RIVER VALLEY, AND PRESIDIO BOLSON IN WESTERNMOST TEXAS
Donald E. White, Joseph S. Gates, James T. Smith, and Bonnie J. Fry Oct. 1980 103 p Prepared in cooperation with Geological Survey, Austin, Tex.
(PB82-105289; TDWR/R-259) Avail: NTIS CSCL 13B

Ground water data was collected in the Texas basins west of the Pecos River drainage area and northwest of the Big Bend country. The basins included are, from east to west: Presidio Bolson, Salt Basin, Green River Valley, Eagle Flat, and Red Light Draw. The data collection program consisted of an inventory of all major irrigation, municipal supply, and industrial wells; selected stock and domestic wells; and selected springs. The data covers parts of Hudspeth, Culberson, Jeff Davis, and Presidio Counties. Maps and tables show locations of wells and springs; records, including water levels; and chemical analysis. CHARACTERIZATION OF SCRUBBED AND UNSCRUBBED POWER PLANT PLUMES Final Report, Jun. 1980 - Apr. 1981
Gregory R. Markowski, Jeffrey L. Stith, and L. Willard Richards Jun. 1981 60 p refs
(Contract EPA-68-02-3418)
(PB82-101346; EPA-600/3-81-041) Avail: NTIS HC A04/MF A01 CSCL 13B

Airborne measurements of scrubbed and unscrubbed plumes were made under the SCRUB program. The flight program and methodology of the SCRUB program and results of the analysis of the data gathered during the flight program are presented. The analysis results cover plume chemistry, primary aerosol, aersol size distributions; and aerosol formation rates among the scrubbed and mixed plumes. Little difference was seen in photochemical aerosol and sulfate formation in the scrubbed and unscrubbed plumes. However, measurement noise and plume mixing may have obscured moderate differences. The submicron primary emissions from the scrubbed unit were only about 14 percent of those from the unscrubbed unit. GRA

EVALUATION OF POINT SOURCE DISPERSION MODELS Final Report
Michael T. Mills, Roger Calazza, David D. Hergert, and David A. Lynn Sep. 1981 274 p refs
(Contract EPA-68-02-3192)
(PB82-121062; EPA-450/4-81-032) Avail: NTIS HC A12/MF A01 CSCL 13B

Two Gaussian point source dispersion models were evaluated by use of hourly meteorological, air quality, and emissions data collected at four power plant monitoring networks. Two versions of the EPA CRSTER model, CRSTER (Turner) and CRSTER (Irwin), were evaluated. CRSTER (Turner) is the current EPA CRSTER Model which used the so called Pasquill-Gifford-Turner (P-G-T) dispersion curves. CRSTER (Irwin) is a modification of the model based upon Irwin's horizontal and vertical dispersion curves. These models differ only in the choice of horizontal and vertical plume dispersion coefficients (sigma (y) and sigma (z)) and wind profile coefficients. Author

AN INVESTIGATION OF CHEMISTRY AND TOXICITY OF OZONE-PRODUCED OXIDANTS AND BROMATE TO SELECTED ESTUARINE SPECIES
Dennis T. Burton and Leonard B. Richardson May 1981 100 p refs
(Grant EPA-R-804683)
(PB82-116351; EPA-600/4-81-040) Avail: NTIS HC A05/MF A01 CSCL 13B

The chemical and biological effects of ozone in estuarine systems was determined. Its suitability as an alternative to chlorine was evaluated. Chemical studies were performed to determine oxidant decay rates and bromate formation in both natural and artificial estuarine water. Ozonation of estuarine or marine waters can produce significant amounts of bromate if the natural levels of ammonia-nitrogen and other competing compounds are low and the initial residual oxidant and bromide concentrations are high. Toxicity studies showed that the concentrations of bromate which theoretically could be formed in an ozonated discharge were not toxic to the early life stages of striped bass (Morone saxatilis) and juvenile spot (Leiostomus xanthurus). A ozone appears to offer few if any, advantages over chlorine in reducing toxicity to estuarine organisms. Author

EPA UTILITY FGD (FLUE GAS DESULFURIZATION) SURVEY Final Report, Apr. - Jun. 1981
M. Smith, M. Melia, N. Gregory, and R. McKibben Aug. 1981 335 p
(Contract EPA-68-02-3173)
(PB82-115858; EPA-600/7-81-012D) Avail: NTIS HC A15/MF A01 CSCL 13B

A survey of operational and planned domestic utility flue gas desulfurization (FGD) systems, operational domestic particle scrubbers, and Japanese coal-fired utility FGD installations is presented. It summarizes information contributed by the utility industry, system and equipment suppliers, systems designers, research organizations and regulatory agencies. It presents data on system design, fuel characteristics, operating history, and actual performance. Unit by unit dependability parameters are included and problems and solutions associated with the boilers, scrubbers, and FGD systems are discussed. The domestic FDG systems are tabulated alphabetically by development status (operational, under construction, or in the planning stages), utility company, system supplier, process, waste disposal practice, and regulatory class. QUALITY ASSURANCE AUDITS FOR SIP AND NECRMP EMISSION INVENTORIES: NEW YORK AND NEW JERSEY Final Report
L. G. Wayne and J. Cassamassi Aug. 1981 100 p
(Contract EPA-68-02-3511)
(PB82-114273; EPA-902/4-81-002) Avail: NTIS HC A05/MF A01 CSCL 13B

Quality assurance audits were performed covering emission inventories for volatile organic compounds and oxides of nitrogen in the State of New Jersey and in a portion of the State of New York comprising the counties of Rockland, Westchester, Nassau, Suffolk, Bronx, New York, Queens, Kings and Richmond. Point source listings were compared with EPA's RACT directory and with State Industrial Directors to compile list of possibly missing point sources. Methodology involved in segregating point and area sources, in estimating emissions and in seasonal adjustment of the inventories to a typical summer-day basis was reviewed. Area source categories and the methodologies an apportioning factors applied to them were reviewed. Results are extensively tabulated. GRA

THE ENVIRONMENTAL STRATIGRAPHY AND DEPOSITIONAL SYSTEMS OF THE PRECAMBRIAN (?)-CAMBRIAN CAMPITO FORMATION, EASTERN CALIFORNIA AND WESTERN NEVADA Ph.D. Thesis
Jeffrey Frazer Mount 1980 246 p
Avail: Univ. Microfilms Order No. 8127995

The Campito Formation is a 1300 m thick upper Precambrian(?)Lower Cambrian sequence of siliciclastic rocks that crop out extensively in western Nevada and eastern California. The formation comprises two members: the Andrews Mountain Member and the gradationally overlying Montenegro Member. The Andrews Mountain Member consists of complexely interbedded, dark-colored feldspathic quartzites, siltstones and mudstones. The Montenergro Member is composed mostly of siltstones and mudstones. The Campito lithologies reflect a complex diagenetic and metamorphic history. Most importantly, the abundant magnetite within the rock was produced by metamorphic recrystallization of a preexisting iron oxide phase, probably hematite (?) A transition analysis of the five facies and nine subfacies of the campito formation indicates that two overall depositional systems can be be described as defined by the two members. Dissert. Abstr.

SEDIMENTOLOGY AND DIAGENESIS OF BRYOZOAN AND SPONGE-RICH CARBONATE BUILDUPS GREAT BAHAMA BANK Ph.D. Thesis
Deborah Marie Bliefnick 1980 299 p
Avail: Univ. Microfilms Order No. 8123243

On the northern third of the Great Bahama Bank, bryozoans and sponges are prominant constituents (including framebuilders) of Holocene carbonate buildups. These buildups are significant because bryozoans and sponges as framebuilders. These buildups are significant because bryozoans and sponges as framebuilders, whether minor or major, have not previously been reported from the modern world. The bryozoan-rich buildups occur in the main tidal channel that dissects the Joulters Cays ooid sand shoal just north of Andros Island; eight mounds were sampled and examined. The sponge-rich buildups are scattered across the open bank, north and west of Joulters Cays; eleven sites or stations containing sponge mounds were mapped and sampled. Three main facies complexes are delineated in the Joulters Cays buildups: shelf margin, oolite shoal and coral reef. The shelf margin complex consists of two parts: a lithoclast packstone facies and a peloid-foram grainstone facies. The oolite shoal complex is dominated by oomoldic and oolitic grainstones. The coral reef facies complex consists mainly of Porites and Montastrea coral boundstone with lesser amounts of Celleporariid bryozoan and lithothamnioid boundstones. Dissert. Abstr.

A SIMULATION OF EQUATORIAL PLASMA BUBBLE SIGNATURES ON THE OI 6300 A NIGHTGLOW MERIDIONAL PROFILE OVER BRAZILIAN LOW LATITUDE

Y. Nakamura, J. H. A. Sobral, and M. A. Abdu Nov. 1981 23 p refs Submitted for publication
(INPE-2260-PRE/042) Avail: NTIS HC A02/MF A01

The [OI] 6300 A nightglow emission measurements carried out by scanning photometers over Cachoeira Paulista show propagating disturbances of the meridional and east-west intensity profiles. The disturbances propagate from north to south and from west to east. It is shown that these disturbances are closely correlated with the occurrence of spread F irregularities observed by ionosonde. Airglow intensity was calculated as a function of zenith angle in the photometer scanning range using electron density profiles perturbed by field aligned plasma bubble, whose vertical velocity and electron density depletion profile were determined from a numerical simulation of the nonlinear Rayleigh Taylor instability under ionospheric conditions that best represented those of the observing period and location. The result shows that, as the field aligned plasma bubbles rises up over the equator, their extremities trace out poleward motion in the low latitude ionosphere which could explain the observed north to south propagation of the airglow intensity valleys. J.M.S.

EQUATORIAL SPREAD F INSTABILITY CONDITIONS AS DETERMINED FROM IONOGRAMS

M. A. Adbu, R. T. deMedetros, and J. H. A. Sobral Jan. 1982 12 p refs Sponsored in part by FNDCT
(INPE-2310-PRE/075) Avail: NTIS HC A02/MF A01

Conditions of plasma irregularity (or Spread F) generation under the Rayleigh-Taylor instability mechanism in the nighttime equatorial ionosphere are examined from ionogram data registered over Fortaleza (4 deg S, 38 deg W, mag. dip lat. - 1.7 deg) Brazil for a one year period. The results show that local ionospheric conditions such as the bottomside F region electron density scale length and the ion neutral collision frequency at the base of the layer, at sunset hours, determine the generation of the spread F irregularities over the equator in the post sunset hours. A COMPLETE X-RAY SAMPLE OF THE HIGH LATITUDE SKY FROM HEAO-1 A-2: log N lo S AND LUMINOSITY FUNCTIONS

G. Piccinotti, R. F. Mushotzky, E. A. Boldt, S. S. Holt, F. E. Marshall, P. J. Serlemitsos, and R. A. Shafer Aug. 1981 51 p refs Submitted for publication

(NASA-TM-82168) Avail: NTIS HC A04/MF A01 CSCL 04A

An experiment was performed in which a complete X-ray survey of the 8.2 steradians of the sky at galactic latitudes where the absolute value of b is > 20 deg down to a limiting sensitivity of < 3.1 x ten to the minus 11th power ergs/sq cm sec in the 2-10 keV band. Of the 85 detected sources 17 were identified with galactic objects, 61 were identified with extragalactic objects, and 7 remain unidentified. The log N - log S relation for the non-galactic objects is well fit by the Euclidean relationship. The X-ray spectra of these objects were used to construct log N - log S in physical units. The complete sample of identified sources was used to construct X-ray luminosity functions, using the absolute maximum likelihood method, for clusters galaxies and active galactic nuclei. M.D.K.

SOIL PROPERTIES OF USSR STRATEGIC AREAS. VOLUME 1: SOIL PROPERTY COMPARISONS FOR SELECTED USSR AND U.S. SOILS Topical Report, 5 Jan. - 1 Dec. 1980

Deane Oberste-Lehn Washington DNA 1 Dec. 1980 113 p refs

(Contract DNA001-80-C-0069)

(AD-A108743; RDA-TR-113206-003-Vol-1; DNA-5701T-1) Avail: NTIS HC A06/MF A01 CSCL 08/7

Soils of USSR strategic areas and the MIDDLE GUST test site were compared to evaluate the validity of using MIDDLE GUST geology as representative of radiation energy absorption for USSR strategic areas. Average Z values were calculated for the USSR and MIDDLE GUST soils using weight and adjusted volumetric methods. Results indicate that porosity and pore water content cause greater variation in the average Z values of these soils than does the mineralogic component, and that method of calculation causes significant differences. To verify the validity of using the MIDDLE GUST test site for radiation energy absorption calculations of USSR strategic areas, it is recommended that the computer codes use the volumetric (not weight) calculation method and that the vegetation in the USSR areas be assessed for its effect on energy coupling into the ground. THE GLOBAL Pc 5 EVENT OF 14-15 NOVEMBER 1979

J. F. Fennell, J. R. Ashbridge, D. N. Baker, R. D. Belian, P. R. Higbie, R. D. Zwickl, B. Wilken; and C. W. Arthur 1 Oct. 1981 43 p refs Prepared in cooperation with LASL and Colorado Univ., Boulder

(Contract F04701-81-C-0082)

(AD-A108143; TR-0082(2940-05)-5; SD-TR-81-74) Avail: NTIS HC A03/MF A01 CSCL 04/1

Large amplitude Pc-5 waves with 7-8 minute quasi-periodic variations were observed almost continuously for the forty-eight hours of November 14-15, 1979 by several spacecraft in or near geostationary orbit on the day-side portions of their orbits. The waves were observed as large modulations in both the electron and ion fluxes over a wide range of energies (approximately 1 to 500 keV) by the spacecraft 1976-059, 1977-007, 1979-053, P78-2, and GEOS-2 and as magnetic field peak-to-peak modulations of 15-25 gamma by the P78-2 and GOES-2 and -3 magnetometers. The remarkably long persistence of these waves contrasts substantially with observations of typical flux modulation events which usually last less than one hour and which typically show little modulation of the greater or less than 150 keV proton fluxes. SITE INVESTIGATIONS AND SUBMARINE SOIL MECHANICS IN POLAR REGIONS

Edwin J. Chamberlain Oct. 1981 20 p refs Sponsored in part by Geological Survey

(AD-A108269; CRREL-SR-81-24) Avail: NTIS HC A02/MF A01 CSCL 08/13

Placing oil exploration and production structures offshore in the Alaskan Beaufort Sea will require careful site investigation and evaluation of submarine soil mechanics. Ice-bonded permafrost occurs widely under the Beaufort Sea floor. Its engineering properties are important to the design of offshore structures. Highly overconsolidated clays also occur widely and interfere with access to gravels for constructing artificial islands. Sites should be selected to avoid ice-rich permafrost. Laboratory tests may need to be conducted to determine the potential hazards of thaw consolidation and weakening. GRA

DESIGN OF SOUNDING ROCKET PAYLOADS Final Report, 1 May 1976 - 30 Apr. 1981

Richard L. Morin and Lawrence J. OConnor 1 Jul. 1981 72 p refs
(Contract F19628-76-C-0152; AF Proj. 7659)
(AD-A108271; AFGL-TR-81-0235) Avail: NTIS HC A04/MF A01 CSCL 19/7

This report is a summary of work accomplished from 1 May 1976 to 30 April 1981. Contract efforts were in the design, fabrication, testing, and launch support of sounding rocket payloads and related ground support equipment. Specific areas of work related to this report include: payload structures, component packaging, deployment and eject mechanisms, diagnostic components, in-flight sequencing, power systems and control consoles. Also described are electrical and mechanical interfaces with experiments, telemetry systems, attitude control systems, recovery systems and other payload subsystems. GRA

STATE-OF-THE-ART FOR ASSESSING EARTHQUAKE HAZARDS IN THE UNITED STATES. INTERPRETATION OF STRONG GROUND MOTION RECORDS

Bruce A. Bolt Oct. 1981 219 p refs
(Contract DACW39-78-C-0061)
(AD-A108615; WES-MP-S-73-1-17; Rept-17) Avail: NTIS HC A10/MF A01 CSCL 08/11

The main patterns of motions recorded on accelerograms near to the causative fault are described in terms of P and S waves and Love and Rayleigh waves. In order to achieve this, the effects of source dimensions and the physical and kinematic properties of the fault zone are included in the analysis. The two main aims of the work were, first, to make an initial step toward the routine interpretation of the recorded strong ground motions and, as a consequence, to provide a basis which would allow ground motions in future large earthquakes to be predicted. Both aspects of strong-motion seismology are of interest to the engineering profession for the design of critical structures in earthquake country. The research has been based on the detailed study of near-field records obtained in moderate to large earthquakes in the last few decades. Author

AN EXPLICIT METHOD OF SOLUTION OF THE GEOMAGNETIC INDUCTION PROBLEM

Victor Barcilon Nov. 1981 22 p refs
(Contract N00014-76-C-0034; NR Proj. 041-476)
(AD-A109369) Avail: NTIS HC A02/MF A01 CSCL 08/7

The problem of inferring the Earth conductivity as a function of depth from surface measurements of the magnetic field is considered. Two versions of a method analogous to that of Bailey (1970) are presented. The main feature of the method consists in the fact that the conductivity is given explicitly in terms to two auxiliary sequences of functions which are found by integrating a set of first order nonlinear differential equations. METHODS FOR INTERPRETING ATMOSPHERIC SPECTRAL OBSERVATIONS BY SUN SIGHTING THROUGH THE EARTH LIMB Ph.D. Thesis - Paris, 6 Univ.

Gerard Eichen Nov. 1981 94 p refs Transl. into ENGLISH from "Methodes d'Interpretation d'Observations Spectrales Atmospheriques Effectuees par Visee au Soleil a travers le Limbe Terrestre", Rept. ONERA-NT-1981-2, Paris, 1981 Original report in FRENCH previously announced as N81-27739
(ESA-TT-715; ONERA-NT-1981-2) Avail: NTIS HC A05/NF A01

Measurements of absorption line areas are compared to each other and given examples, e.g. the reconstruction of NO2 profiles. Preference is given to an iterative method which makes the final solution largely independent of the initial vertical profile. A method entirely based on the calculation of synthetic spectra was studied from a theoretical viewpoint. Results of simulated observations assuming nine spectra without noise show that the profile can be recovered even with a zero initial profile. White noise does not affect results significantly. The ability to treat large numbers of spectra suits the method to Spacelab experiments. Author (ESA)

THE PROPERTIES OF IONOSPHERIC SINGLY IONIZED OXYGEN IONS AS OBSERVED IN THE MAGNETOTAIL BOUNDARY LAYER AND NORTHERN PLASMA LOBE

M. Candidi, S. Orsini, and V. Formisano (ESTEC, Noordwijk, Netherlands) Jun. 1981 34 p refs Submitted for publication
(IPS-81-11) Avail: NTIS HC A03/MF A01

The singly ionized oxygen ion beams flowing in the geomagnetic tail low latitude boundary layer and northern plasma lobe were investigated, using the ISEE-2 positive ion experiment. The data analysis shows that the ion velocity gradually increases from the center to the outer regions of the magnetotail, whereas the plasma density decreases the farther one moves away from the center. The temperature of the beaming ions is shown to be anisotropic with respect to the ambient magnetic field. The results clearly identify the E x B filter as the organizer of the flow of these ions after their initial acceleration in the topside ionosphere. Indications are that the acceleration mechanism is a combination of both electrostatic fields parallel to B and resonance with ion cyclotron waves. Author (ESA)

ANALYSIS OF GUST STRUCTURE IN THE ATMOSPHERIC BOUNDARY LAYER BY USING CONDITIONAL SAMPLING

Magnus Linde 10 Jun. 1981 29 p refs
(Contracts NE-5061-013; NE-5061-014)
(FFA-TN-HU-2262-Pt-1; ISSN-0081-5640) Avail: NTIS HC A03/MF A01

A conditional sampling scheme used to detect events characterized by a high level of short time variance is assessed for use in detecting gusts. The conditionally sampled average of the longitudinal velocity component exhibits a typical structure, a gust. This structure is similar to the bursts in turbulent boundary layers. The frequency of occurrence and the time scale of the gusts are determined by the same variables as the bursts, i.e., the outer variables free stream velocity and surface layer thickness. The technique was compared with wind measurements carried out at a fixed point. The structure and frequency of gusts are predicted accurately. Author (ESA)

CATALOG OF SIGNIFICANT EARTHQUAKES, 2000 B.C. - 1979: INCLUDING QUANTITATIVE CASUALTIES AND DAMAGE

Robert A. Ganse and John B. Nelson Jul. 1981 164 p refs
(PB82-117425; NOAA-81082703; SE-27) Avail: NTIS HC A08/MF A01 CSCL 08K

The Significant Earthquake Catalog includes events from available sources that meet the following criteria: moderate damage or at least 10 deaths, of magnitude 7.5 or greater. For events lacking magnitude, intensity X or greater is the criterion. Many lesser events are also included. The catalog consists of some 2,484 events drawn from more than 100 different sources. The events range in date from 2,000 B.C. through 1979. It lists the following seismological parameters for each event: time, deaths, latitude and longitude, damage, class, depth, references, magnitude/intensity, and geographic location. When a substantial portion of the damage is noted to be associated with a tsunami, the word 'tsunami' is placed in the location column. GRA

PRECIPITATION FIELD AND INTRASTORM FLOW OF SUPERCELL CONVECTIVE STORMS Ph.D. Thesis

Daniel James McMorrow 1981 283 p
Avail: Univ. Microfilms Order No. 8128911

Single-Doppler radar data, when supplemented by surface and upper-air information, provides good estimates of the intrastorm kinematic structure of supercell storms. Spatially derived fields of radial velocity, defined as radial stretching and cross-beam shear, can be used to identify and track major intrastorm kinematic features. These fields can be computed quickly and require neither storm motion information nor a favorable beam-flow alignment. Changes in surface precipitation rates, from isolated and squall line supercells, are reflected in changes in the intrastorm flow inferred from single-Doppler data. Temporal changes in supercell kinematic structure are related to changes in surface rainfall rates. Supercell rainfall in several different environments are presented. The results suggest that changes in surface rainfall rates are related to changes in intrastorm kinematic flow. Dissert. Abstr.

A THREE-DIMENSIONAL WIND MODEL FOR COMPLEX TERRAIN Ph.D. Thesis

Mark Alan Yocke 1981 251 p
Avail: Univ. Microfilms Order No. 8200313

The development, implementation, and application of a three dimensional, complex-terrain wind model are presented. The model is based on the equation of mass continuity and it employs different schemes to parameterize various physical processes that are included in the model's convergence-divergence term. The model equation is written in a conventional Poisson form and then solved numerically using a five-point difference approximation with an iterative solution procedure. To assess its performance, this model was applied to five complex-terrain situations reveal that the model produced acceptable results, especially considering the uncertainties in wind measurements. Futhermore, the model exhibits no significant tendencies toward overprediction or underprediction. Dissert. Abstr.

AIRCRAFT MEASUREMENTS AND ANALYSIS OF SEVERE STORMS: 1976 FIELD EXPERIMENT Final Report

P. C. Sinclair Feb. 1982 101 p refs
(Grant NsG-5105)
(NASA-CR-168519) Avail: NTIS HC A06/MF A01 CSCL 04B

Severe storm aircraft measurements are documented, as well as the instrumentation and operational features of aircraft mobility capabilities. The measurements and data analyses indicate that the concept of a highly mobile research aircraft capability for obtaining detailed measurements of wind, temperature, moisture, spherics, etc., near and within severe storm systems, forecast 48 hours in advance in a 1000 nm operating radius, is feasible, and was successfully demonstrated. The measurements and analyses reveal several severe storm features and insights with respect to storm air flow circulations and inflow-outflow orientation. Precipitation downdraft air is recirculated back into the updraft core below the scud cloud in both back and front feeder type storms. In a back feeder type storm, the downdraft outflow air ahead of the storm is also recirculated back into the updraft region near cloud base. S.L.

RADAR DETECTION OF TURBULENCE IN THUNDERSTORMS
Alan R. Bohne 31 Mar. 1981 64 p refs
(AF Proj. 6670)
(AD-A108679; AFGL-TR-81-0102; AFGL-ERP-736) Avail: NTIS HC A04/MF A01 CSCL 04/2

Theoretical investigations are undertaken to relate intensity of turbulent air motion to Doppler radar spectrum mean and variance in precipitation environments. Examples of theoretical radar derived turbulence power density spectra and total precipitation motion variance show that effects due to imperfect particle response are significant for turbulence scale lengths less than 250 m. Doppler spectrum variance and estimated eddy dissipation rate (epsilon) are found strongly dependent upon precipitation environment for ranges less than about 20 km, and for cases where the turbulence outer scale length (lambda) is less than 0.5 km. They are also found to be essentially independent of lambda when the maximum pulse volume dimension is less than 1/2 lambda, and independent of range but strongly dependent on lambda at ranges where the maximum pulse volume dimension is greater than lambda. Estimation of epsilon by radar is shown to be unreliable until a method of remotely determining lambda is found. Nevertheless, classification of turbulence severity (index = cube root of epsilon is possible with only a reasonable guess of lambda. Analyses of aircraft/gust velocity data indicate that thunderstorm turbulence is localized into discrete patches, and that such localization must be accounted for when aircraft gust velocity data undergo power spectrum analysis. GRA

SHORTRANGE FORECASTING OF CLOUDINESS AND PRECIPITATION THROUGH EXTRAPOLATION OF GOES IMAGERY Final Report

H. Stuart Muench 16 Jul. 1981 48 p refs
(AF Proj. 6670)
(AD-A108678; AFGL-TR-81-0218; AFGL-ERP-750) Avail: NTIS HC A03/MF A01 CSCL 04/2

This report describes the development and testing of an objective technique to forecast cloudiness and precipitation through extrapolation of satellite imagery. By using an objectively determined cloud-motion vector, the technique makes local forecasts of satellite parameters (brightness and IR temperature), with high temporal resolution, using simple linear extrapolation. Algorithms are then used to convert the satellite parameters to total cloud cover, probability of 1-hour precipitation, and presence of low, middle, and high clouds. The test program computed motion vectors and made forecasts out to 7 hours, in half-hour steps, at 30 locations. The program was tested on 12 spring and fall cases, using half-hourly GOES imagery. For periods beyond 2 hours, forecasts of cloud cover and precipitation were markedly better than persistence, while deficiencies in specification hindered short-period performance. Forecasts of cloud layers were worse than persistence due to inadequate specification algorithms. The net results were quite encouraging. GRA

WIND TUNNEL AND LABORATORY CALIBRATION OF BALLOON-BORNE WIND SENSORS Interim Report

J. H. Brown and R. E. Good 27 Jul. 1981 33 p refs
(AF Proj. 6687)
(AD-A108676; AFGL-TR-81-0219; AFGL-IP-303) Avail: NTIS HC A03/MF A01 CSCL 14/2

Two-low speed wind sensors have been calibrated for measuring the wind speed at an instrument suspended below stratospheric balloons. The low Reynolds number environment was duplicated at the NASA/Ames low-speed MARSWIT wind-tunnel facility, and in a laboratory bell jar. The two new instruments are the time-of-flight instrument that measures the motion of an ion cloud through an open pipe, and the corona anemometer that measures the displacement of an ion beam transversing the air-stream flowing between two plates. The calibrations consist of placing the instruments in a flow stream, and relating the instrument output to the flow-stream velocity. The laboratory calibration is easy to conduct, but is limited to a measurement of internal flow velocity. The wind-tunnel calibration is performed to relate laboratory calibration to freestream conditions. Author (GRA)

N82-18815# Air Force Geophysics Lab., Hanscom AFB, Mass. Meteorology Div.

AN AUTOMATED LOW CLOUD PREDICTION SYSTEM Final Scientific Report

Edward B. Geisler 7 Jul. 1981 38 p refs
(AF Proj. 6670)
(AD-A108681; AFGL-TR-81-0191; AFGL-ERP-746) Avail: NTIS HC A03/MF A01 CSCL 04/2

At the Air Force Geophysics Laboratory (AFGL) Weather Test Facility (WTF) at Otis AFB, MA, a network of cloud base height, visibility, and wind measuring instruments were used to explore techniques for the short range prediction of low cloud ceiling. The approach relies upon the use of a hierarchical clustering algorithm to transform the raw cloud base height data into an automated low cloud observation. Four prediction techniques (Regression Estimation of Event Probabilities, Equivalent Markov, climatology, and persistence) yielding probability estimates of low cloud ceiling were evaluated and comparisons made to determine their respective accuracy and reliability. In addition, thresholding techniques were used to convert probability forecasts (unit bias, maximum probability, iterative, and persistence). Analysis of the data collected at the AFGL WTF demonstrates the accuracy and reliability of the automated low cloud prediction system. Regression estimation of event probabilities provided accurate, reliable, high resolution probability forecasts with results superior to climatology, persistence, and Equivalent Markov. GRA

DEVELOPMENT OF A CLEAR AIR RADAR TO DETECT METEOROLOGICAL HAZARDS AT AIRPORTS Final Report, 1 Oct. 1978 - 21 Sep. 1981
R. B. Chadwick, K. P. Moran, W. C. Campbell, K. B. Earnshaw, and T. R. Detman 21 Sep. 1981 113 p refs
(Contract ESD-0-0630; AF Proj. 6670)
(AD-A108236; AFGL-TR-81-0268) Avail: NTIS HC A06/MF A01 CSCL 17/9

To be useful in detecting meteorological hazards, such as low-level wind shear near airports, a radar must be able to: (1) detect backscatter from both clear air and rain; (2) operate at short ranges and low elevation angles; and (3) measure Doppler frequencies caused by air motion. The development of a radar with these characteristics is described and the results of testing this radar at airports are presented. Special emphasis is placed on the problems of low elevation angle operation and clutter suppression. The importance of proper siting is pointed out. In addition, it is demonstrated that the radar can readily detect the turbulent wakes of large jet aircraft. Author (GRA)

US NAVY MARINE CLIMATIC ATLAS OF THE WORLD. VOLUME 9: WORLD-WIDE MEANS AND STANDARD DEVIATIONS
Oct. 1981 355 p refs
(AD-A108222; NAVAIR-50-1C-65-Vol-9) Avail: NTIS HC A16/MF A01 CSCL 04/2

The eight volume series of the U.S. Navy Marine Climatic Atlas of the World has had world-wide acceptance as an authoritative reference for large scale operational planning and applied research. This volume, based on the entire period of record available, resulted from the need to develop an automated quality control scheme for marine observations for use in the revision of the first 5 volumes of Atlas series. This was basically achieved by summarizing, analyzing and digitizing the mean and standard deviation charts that appear in this volume. Author (GRA)

EXPERIMENTS IN REGIONAL SCALE NUMERICAL WEATHER PREDICTION INCLUDING USE OF SESAME '79 DATA Final Report
Carl W. Kreitzberg Aug. 1981 10 p
(Contract F49620-79-C-0208; AF Proj. 2310)
(AD-A108372; AFOSR-81-0770TR) Avail: NTIS HC A02/MF A01 CSCL 04/2

This research has as a goal testing of a state-of-the-art mesoscale model using a unique set of meteorological data and to gain insight into the modeling of radiation, clouds, precipitation and boundary layer effects in such models. Development of four dimensional data assimilation schemes and analysis of the sensitivity of the model to horizontal and vertical resolution were also to be accomplished. The four dimensional assimilation was deemphasized, at this time, when it became clear that the sensitivity results differed greatly from storm to storm. Scientific papers have been prepared that demonstrate the usefulness and sensitivity of such models in studying the evolution of meso-alpha (regional or sub-synoptic) and meso-beta (fronts; convection bands) disturbances. Specifically, it is clear that latent heating from convection can greatly alter the wind field on scales of 1,000 km. The first SESAME '79 case, April 10, 11, 1979 that produced the Wichita Falls, TX tornado was unique in that the cyclonic scale could not be predicted from the conventional data. The substantial variation in predictability suggests that considerable emphasis should, in the future, be placed on four dimensional data assimilation. Author (GRA)

LONG RANGE LASER ANEMOMETRY WITH PARTICULAR REFERENCE TO WIND POWER DEVELOPMENT
L. Danielsson and E. R. Pike (Royal Signals and Radar Estab., Malvern, England) 6 Oct. 1981 51 p refs Submitted for publication
(Contract NE-5061-014)
(FFA-TN-HU-2262-Pt-3) Avail: NTIS HC A04/MF A01

Literature on atmospheric scattering of visible (Ar+) and IR (CO2) laser beams with transit time and Doppler processing was reviewed. A decision flow diagram for geometrical specifications of wind measurements and comparison tables are provided in order to show which system is best for any given task, e.g., wind generator interaction. When range resolution, flexibility, and economic requirements permit, an IR system is recommended. The economic advantages of time multiplexing are pointed out. Author (ESA)

FLORIDA AREA CUMULUS EXPERIMENT (FACE), 1980: OPERATIONAL SUMMARY AND DATA INVENTORY
Jun. 1981 193 p refs
(PB82-113291; NOAA-TM-ERL-OWRM-5; NOAA-81082101) Avail: NTIS HC A09/MF A01 CSCL 04B

The last field year of the confirmation phase of the Florida Area Cumulus Experiment was conducted in 1980 following summer experiments in 1978 and 1979. The purpose of FACE-2 is confirmation of the results of FACE-1, which suggest that dynamic seeding was instrumental in increasing precipitation over a fixed target area. The period for experimentation in 1980 was 16 June through 31 August. During this 77 day period, randomized cloud seeding and other studies were conducted. GRA

COASTAL UPWELLING ECOSYSTEMS ANALYSIS. TECHNICAL REPORT 40: ATLAS OF THE JOINT 2 1976 AIRCRAFT WINDS FOR THE 500 FOOT LEVEL

D. W. Stuart and A. I. Watson Jun. 1981 71 p refs

(Grant NSF OCE-77-27735)

(PB82-113911; FSU-MET-STU-81-3; NSF/IDOE-81-45; NSF/IDOE/CUEA/TR-40) Avail: NTIS HC A04/MF A01 CSCL 04B

Maps of winds at 500 ft are presented for thirteen individual flights using aircraft data gathered during daytime (1000-1600 hours) flights made in March - April as a part of a data analysis program. Details of the data reduction and analysis techniques are discussed. The total wind field is shown by maps of the streamlines and isotachs while the alongshore and onshore components are shown by isotach maps. Maps of the 500 ft winds on the individual flights reveal the flow is generally steady and parallel to the coast but with onshore flow near the mouth of the Ica River. Author (GRA)

TECHNOLOGY AND OCEANOGRAPHY: AN ASSESSMENT OF FEDERAL TECHNOLOGIES FOR OCEANOGRAPHIC RESEARCH AND MONITORING

Jun. 1981 27 p

(OTA-O-142) Avail: NTIS HC A03/MF A01

The status of technologies used to collect data about the ocean and to conduct experiments in the ocean is addressed. Problems and opportunities are analyzed and the Federal agencies and programs charged with conducting oceanic studies and providing the necessary management and hardware systems are examined. Selected national programs directed toward conserving and managing marine fishery resources, developing an oceanographic satellite system investigating the geology and possible resource potential of the continental margins beneath the deep ocean, and developing a climate prediction capability are analyzed. FILTRATION OF ELEMENTS OF ORBITAL IMAGES CONTAMINATED BY CLOUDS, TO OBTAIN IMPROVED MEASUREMENTS OF THE BLACK BODY TEMPERATURE FOR USE IN OCEANOGRAPHY [FILTRAGEN DE ELEMENTOS DE IMAGENS ORBITALS CONTAMINADAD POR NUVENS, PARA A OBENTCAO DE MEDICOES MELHORADAS DA TEMPERATURA DE CORPO NEGRO, PARA USO EM OCEANOGRAFIA]

Merritt Raymond Stevenson and Hector Manuel Inostroza Villagra Jun. 1981 18 p refs In PORTUGUESE; ENGLISH abstract Presented at the 33rd Ann. Meeting of SBPC, Salvador, Brazil, 8-15 Jul. 1981

(INPE-2121-RPE/345) Avail: NTIS HC A02/MF A01

The inherent problem of the presence of clouds and of cloud contamination in satellite data (pixels) was reviewed. A statistical model is proposed to explain the spatial variability observed in some AVHRR and VISSR data of NOAA-6 and SMS-2 satellites. Basically the approach assumes that the field of view contains different subpopulations, that is to say, surface measurements of unobstructed relatively warm water temperature, partially obscured water with a lower temperature, and clouds with the lowest range of temperature. The equivalent statistical field is obtained by assuming a linear combination of the three (or more) subpopulations where each one of them can be represented by a Gaussian function. A method to eliminate the clouds from the field of view by utilizing the approach where histograms of subsamples contained within larger samples are sequentially evaluated to determine the extent in which the elements of the image are contaminated, is proposed. T.M.

A DYNAMICAL MODEL OF WIND-INDUCED NEAR-INERTIAL MOTIONS Technical Report, Nov. 1980 - Oct. 1981

David M. Rubenstein Nov. 1981 63 p refs

(Contract N00014-81-C-0084)

(AD-A108687; SAI-82-598-WA; OPD-TR-424-81-274-02) Avail: NTIS HC A04/MF A01 CSCL 08/3

A semispectral model of upper ocean inertial motions is developed. The model is solved with a Fourier-Chebyshev expansion in the spatial dimensions, and numerically in time. The model allows the user to specify arbitrary vertical profiles of mean stratification and eddy diffusivity. The model is driven by a wind stress function which is an arbitrary function of time. The model is tested against analytic time-dependent Ekman-layer solutions. The comparisons are excellent. The model is used to simulate the response to a delta-function wind stress impulse. Two cases are presented; one with uniform profiles of stratification and eddy diffusivity, and one with nonuniform profiles. Response functions of wavenumber and frequency are computed for current velocity and shear. The response is shown to be in resonance near the lowest two modes of the internal wave dispersion relation. Author (GRA)

N82-18847# Science Applications, Inc., McLean, Va.

MODELS OF NEAR INERTIAL VERTICAL SHEAR

David M. Rubenstein Nov. 1981 70 p refs

(Contract N00014-81-C-0084)

(AD-A108686; SAI-82-546-WA; OPD-81-274-04) Avail: NTIS HC A04/MF A01 CSCL 08/3

The physics of the interactions between the wind stress, the Ekman layer, and internal waves are reviewed. A general set of equations which describe near-inertial motions are developed. The time dependent behavior of the wind-forced Ekman layer is examined. Then we consider two classes of resonance conditions. The first involves the resonance between the wind field and Ekman pumping, while the second class is the resonance between a propagating Ekman pumping field and the internal wave field. Author (GRA)

STATISTICAL MODELING OF SHEAR IN THE UPPER OCEAN Technical Report, 1 Jan. 1980 - 24 Mar. 1981

Gerald T. Hebenstreit and Walter J. Grabowski 1 Mar. 1981 75 p refs

(Contract N00014-81-C-0084)

(AD-A108212: SAI-82-382-WA) Avail: NTIS HC A04/MF A01 CSCL 20/4

Analysis of upper ocean shear profiles obtained with a free-fall sampling instrument (YVETTE) indicated that, within specific depth regimes and for specified vertical differencing intervals, values of shear-squared might be distributed according to a chi squared probability distribution. An analysis based on several assumptions about the shear field produced a model which showed that a chi squared distribution was physically reasonable. Statistical tests on the profiles led to acceptance of the hypothesis that S squared follows a chi squared distribution with a variance derived from the mean-squared shear in the regime. Further statistical tests showed that the necessary assumptions about the horizontal shear components were statistically reasonable as well as physically reasonable. A trial prediction using a simple linear relationship between mean Brunt-Vaisala frequency in a regime and mean shear-squared, based on a 2m separation, in the regime showed the chi squared model to be a potentially useful tool for area characterizations. SUBSEA TRENCHING IN THE ARCTIC

Malcolm Mellor Sep. 1981 38 p refs
(Contract N68305-80-WR-00186)
(AD-A108341: CRREL-81-17) Avail: NTIS HC A03/MF A01 CSCL 13/2

Environmental conditions are described for the continental shelf of the western Arctic, and for the shelf of Labrador and Newfoundland. Special emphasis is given to the gouging of bottom sediments by ice pressure ridges and icebergs, and an approach to systematic risk analysis is outlined. Protection of subsea pipelines and cables by trenching and direct embedment is discussed, touching on burial depth, degree of protection, and environmental impact. Conventional land techniques can be adapted for trenching across the beach and through the shallows, but in deeper water special equipment is required. The devices discussed include hydraulic dredges, submarine dredges, plows, rippers, water jets, disc saws and wheel ditchers, ladder trenchers and chain saws, routers and slot millers, ladder dredges, vibratory and percussive machines, and blasting systems. Consideration is given to the relative merits of working with seabed vehicles, or alternatively with direct surface support from vessels or from the sea ice. Author (GRA)

GEORGES BANK: AN ANNOTATED BIBLIOGRAPHY OF ATLASES, INVENTORIES AND MAP SERIES

Richard L. Price May 1981 75 p refs Sponsored by Mellon (Andrew W.) Foundation and Pew Memorial Trust
(Grant NA80AA-D-00077)
(PB82-107665; WHOI-81-46; NOAA-81073006) Avail: NTIS HC A04/MF A01 CSCL 08J

The bibliography reviews inventory-like studies of the Georges Bank region and presents information on the scope of the work, topics treated, geographic area of concern, and audience. The primary purpose was to evaluate the nature and type of maps used in the works reviewed so the notations include the number of maps, their formats and scales, cartographic quality and base map content. PHYSIOLOGICAL RESPONSES TO PROLONGED BED REST AND FLUID IMMERSION IN MAN: A COMPENDIUM OF RESEARCH (1974 - 1980)

John E. Greenleaf, Lori Silverstein (San Jose State Univ.), Judy Bliss, Vicki Langenheim, Heidi Rosson (California Univ., Davis), and Clinton Chao (California Univ., Berkeley) Jan. 1982 112 p
(NASA-TM-81324; A-8709) Avail: NTIS HC A06/MF A01 CSCL 06S

Water immersion and prolonged bed rest reproduce nearly all the physiological responses observed in astronauts in the weightless state. Related to actual weightlessness, given responses tend to occur sooner in immersion and later in bed rest. Much research was conducted on humans using these two techniques, especially by Russian scientists. Abstracts and annotations of reports that appeared in the literature from January 1974 through December 1980 are compiled and discussed. Author

The objectives of this research are to develop rapid in-vitro assays to evaluate the carcinogenic potential of chemicals used by the U.S. Air Force. Snyder-Theilen Feline Sarcoma Virus (ST FeSV), quantitatively transforms human skin fibroblasts following second order kinetics. These studies were performed in order to determine whether chemicals altered ST FeSV transformation in a predictable manner and to correlate the alteration with the carcinogenic or non-carcinogenic activity of the text chemical. The results, to date, show diverse carcinogens classed as: aromatic amines, polycyclic hydrocarbons, Aminofluorenes, hydrazines, asbestos and mycotoxins inhibited virus transformation when virus infected cells (2 hours post-infection) were exposed to test chemical, while non-carcinogenic chemicals had no significant effect on transformation. Triton X-100, acetone, petroleum and shale oil derived JP5; RJ5 and diesel fuel, marine, demonstrated non-carcinogenic activity while formaline demonstrated carcinogenic activity. Experiments designed to show the specificity of the antagonistic effect of known carcinogens are reported. Disulfuram inhibits biotransformation of 1,2 symmetrical dimethyl hydrazine (SDMH) metabolites, azomethane to azoxymethane (ultimate carcinogen) thereby preventing carcinogenic effect of the proximate carcinogen SDMH. Detailed methodology required to ascertain effect of chemicals on ST FeSV pro-virus integration and synthesis are presented. GRA

SCATTER DIAGRAMS BASED ON THE ANTHROPOMETRIC SURVEY OF 2000 ROYAL AIRFORCE AIRCREW (1970/1971)
R. E. Simpson and E. Violet Hartley 10 Feb. 1981 154 p refs
(RAE-TR-81017; RAE-EP-763; BR79375) Copyright. Avail: Issuing Activity

An anthropometric survey was conducted in order to provide information for aircrew clothing, personal equipment and aircraft workspace design purposes. Scatter diagrams of pairs of measurements of value to engineers, ergonomists or clothing designers who require information on the interrelationship between specific measurements are presented. Each subject is represented by a pair of coordinates, x and y, which represent the two measurements considered. Information on the number of subjects to which the diagram relates, means of x and y variate values, correlation coefficient, and regression equations for the x and y variates are given. Functional clothing sizing is based on two control measurements, e.g., stature and chest circumference for one piece coveralls. Author (ESA)

MISSION OPERATION REPORT: SPACE SHUTTLE PROGRAM. STS-2 POSTFLIGHT MEDICAL OPERATIONS
29 Jan. 1982 23 p
(NASA-TM-84135; E-989-81-02) Avail: NTIS HC A02/MF A01 CSCL 06S

The STS-2 mission presented the NASA medical team with a series of operational problems associated with the potential contamination of the onboard potable water and altered work/rest cycles. The first problem was traced to the inflight malfunctioning fuel cell, while the second was attributed to the modification of in-flight crew timelines in order to maximize the scientific data acquisition. Shortened sleep period, heavy work laods, inadequate time allocation for food preparation and consumption and estimated low water intake, though tolerable for a 54 hour mission, would have been unacceptable for a longer misson. A contingency plan was developed to restructure in-flight time-lines and institute corrective health maintenance procedures in the event that the mission was extended beyond 54 hours. Minor losses of medical data occurred as a result of the shortened mission duration. All phases of the mission required real-time re-evaluation, identification of potential impact on preexisting medical constraints, and development of appropriate recommendations and solutions. The activities required significant coordination among the different teams involved in medical operations. N.W.

ANALYSIS OF VOLATILE METABOLITES IN BIOLOGICAL FLUIDS AS INDICATORS OF PRODROMAL DISEASE CONDITION Final Report
A. Zlatkis Jan. 1982 25 p refs
(Contract NAS9-15882)
(NASA-CR-167513) Avail: NTIS HC A02/MF A01 CSCL 06E

The volatile profile cannot be defined as a single class of substances, rather it is a broad spectrum of materials of different polarities characterized by having a boiling-point in the low to medium range (up to approximately 300 C) and the fact that the compounds are suitable for gas chromatography without derivatization. The organic volatile profiles are very complex mixtures of metabolic byproducts, intermediates, and terminal products of enzymatic degradations composed mainly of alcohols, ketones, aldehydes, pyrazines, sulfides, isothiocyanates, pyrroles, and furans. The concentration of organic volatiles in biological fluids covers a wide range with many important components present at trace levels. The complexity of the organic volatile fraction requires the use of capillary columns for their separation. T.M.

The goal of this project is to use data from regularly scheduled physical examinations to estimate the probability of an event such as a heart attack. This is done via the construction of a mathematical model. A high probability of an event as computed by the model would be evidence of a high risk case. The model developed here, termed the periodic checkup predictive model, is a survival distribution model similar to the proportional hazards model when there is little or no loss to followup and to logistic regression when the object is to predict the occurrence of an event during a fixed interval of time. EVALUATION OF THE VISUAL ACQUISITION RANGE OF ENROUTE AIR TRAFFIC FROM COCKPIT OBSERVATIONS
Otto Weber Oct. 1981 56 p refs Transl. into ENGLISH from 'Bestimmung der visuellen Auffassreichweite von Verkehrsflugzeugen im Streckenglug aus Beobachtungen im Cockpit', Rept. DFVLR-Mitt-80A-14 DFVLR, Brunswick, West Germany, Sep. 1980 53 p
(ESA-TT-691; DFVLR-Mitt-80-14) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 11,90

Onboard observations and approach lead time measurements are employed. The results of 29 measurement campaigns conducted by airline pilots are analyzed. Evaluation methods are described and problems due to converging courses and large cross track distances in the head-on case are treated. The results for the acquisition range and the apparent size of the intruder derived from this range are discussed. The advantages of anticollision and position lights, vapor trials and air traffic control signals for the acquisition process are demonstrated. Data acquisition improvements are suggested. RESEARCH PREDICTIONS FOR UNDERWATER ACTIVITIES IN THE 1980'S [FORSKNINGSBEHOV INOM 1980-TALETS UNDERVATTENSVERKSAMHET]

Bo Cassel Oct. 1981 29 p In SWEDISH
(FOA-C-58010-H1) Avail: NTIS HC A03/MF A01

Present developments show that technical equipment compliments the diver's work and makes it easier, but cannot take the place of the diver. In bell diving a depth of 700 m was reached in 1981. Data from North Sea diving under harsh weather conditions were studied and make up, to a certain extent, the background of research and development in the next decade. Oil and gas resources at depths between 300 and 600 m will be exploited at that time. Diving at such depths involves special problems. Safety requirements for divers are addressed. Author (ESA)

STUDY OF CHLORINE DIOXIDE AND ITS METABOLITES IN MAN

Joseph R. Bianchine, Judith R. Lubbers, Sudha Chauhan, and Judy Miller Sep. 1981 100 p refs
(Grant EPA-R-805643)
(PB82-109356; EPA-600/1-81-068) Avail: NTIS HC A05/MF A01 CSCL 06T

An assessment of the relative safety of chronically administered chlorine water disinfectants in man was undertaken. A rising dose tolerance investigation examined the effects of single dose increasing concentration administration of chlorine disinfectants to normal healthy adult male volunteers. The impact on normal subjects of twelve week daily ingestion of the disinfectants was addressed. Physiological impact was assessed by evaluation of a large battery of qualitative and quantitative tests. In general, the study affirmed the relative safety and tolerance of normal healthy adult males and normal healthy adult male glucose-6-phosphate dehydrogenase deficient individuals to daily twelve week ingestion of 500 mL of chlorine disinfectants at a concentration of 5 mg/L. HYDROGEN CYANIDE HEALTH EFFECTS Final Report

Bonnie L. Carson, Larry H. Baker, Betty L. Herndon, Harry V. Ellis, III, and Eileen M. Horn Sep. 1981 71 p refs
(Contract EPA-68-03-2928)
(PB82-116039; EPA-460/3-81-026) Avail: NTIS HC A04/MF A01 CSCL 06T

Health effects literature primarily related to inhalation exposures to hydrogen cyanide was collected, evaluated, tabulated and summarized. Approximately 170 documents were collected from computerized and manual literature searches covering the period 1899-1981. Pharmacologists and an M.D. epidemiologist rated the documents according to their applicability to the study and their methodology. The approximately 20 documents considered useful for deriving a range of concern for human exposure to hydrogen cyanide from automotive emissions were tabulated. The 25 pages of tables detail the results of acute and repeated dose testing of mice, rats, guinea pigs, rabbits, cats, monkeys, dogs, goats, donkeys and humans as well as human occupational studies. Most of the documents evaluated are described in an annotated bibliography. GRA

(Contract EPA-68-03-2928)
(PB82-116047; EPA-460/3-81-027) Avail: NTIS HC A06/MF A01 CSCL 06T

Health effects literature primarily related to inhalation exposures to ammonia was collected, evaluated, tabulated, and summarized. Appoximately 200 documents were collected from computerized and manual literature searches covering the period 1886-1981. Pharmacologists and an M.D. epidemiologist rated the documents according to their applicability to the study and their methodology. The approximately 50 documents considered useful for deriving a range of concern for human exposure to ammonia from automotive emissions were tabulated. The 50 pages of tables detail the results of acute, repeated dose, and chronic testing of bats, mice, rats, guinea pigs, chickens, rabbits, cats, monkeys, dogs, turkeys, swine, and humans as well as human occupational and accidental studies. Most of the documents evaluated are described in an annotated bibliography. GRA

EFFECT OF TACTILE VIBRATION ON ANNOYANCE TO SYNTHESIZED PROPFAN NOISE
Sherman A. Clevenson Dec. 1981 16 p refs Presented at the 102nd Meeting of the Acoust. Soc. of Am., Miami Beach, Fla., 1-4 Dec. 1981
(NASA-TM-83258) Avail: NTIS HC A02/MF A01 CSCL 05H

Design information that maximizes passenger comfort for propfan aircraft is presented. Predicted noise and vibration environments and the resultant passenger acceptability were studied. The effect of high frequency tactile vibration (i.e., greater than 30 Hz) on passenger reactions was analyzed. Passenger reactions to a wide range of noise with and without tactile vibration was studied. The passenger ride quality simulator was employed using subjects who evaluated either synthesized propeller noises only, or these noises combined with seat/arm vibration. The noises ranging from 80-100 dB consisted of a turbulent boundary layer noise with a factorial combination of five blade passage frequencies (50-200 Hz), two harmonic rolloffs, and three tone/noise ratios. It is indicated that passenger reaction (annoyance) to noise is not significantly changed in the presence of tactile vibration. E.A.K.

TIME-SHARING MANUAL CONTROL AND MEMORY SEARCH: THE JOINT EFFECTS OF INPUT AND OUTPUT MODALITY COMPETITION, PRIORITIES AND CONTROL ORDER
Michael Vidulich and Christopher D. Wickens Dec. 1981 61 p refs
(Contract N00014-79-C-0658; NR Proj. 196-158)
(AD-A108721; EPL-81-4/ONR-81-4) Avail: NTIS HC A04/MF A01 CSCL 05/1

This report addresses some of the issues that must be considered as voice recognition and synthesis (VRAS) technology is integrated into complex man-machine system environments. These issues include the input and output channels demanded by competing activities, task difficulty or workload, the allocation of attention and the nature of the task that - spatial or verbal - will be interfaced with VRAS. The present experiment addresses primarily the first three issues within the framework of multiple resource theory. Ten subjects performed first and second order tracking tasks either alone or concurrently with a Sternberg Memory Search Task with a set size of three letters. In different conditions the memory search task was presented either auditorily (A) or visually (V), and responses were executed with either a speech response (S), or manually (M). These generated four input/output combinations: AS, VS, AM, VM, that could be defined in terms of an increasing degree of resource overlap with the VM tracking task. GRA

HOW AN UNFAMILIAR THING SHOULD BE CALLED
Patricia Baggett and Andrzej Ehrenfeuch Nov. 1981 33 p refs
(Contract N00014-78-C-0433; NR Proj. 157-422)
(AD-A109179; TR-111-ONR) Avail: NTIS HC A03/MF A01 CSCL 05/10

An empirical method is described to derive good names for unfamiliar objects. Three principles were used in deriving the names: (1) The vocabulary and structure of the names should be within the user's linguistic capacities; (2) the names should be informationally efficient, namely, short, but at the same time unique; and (3) the names should form a classification system. For example, most names have a generic term and one or more modifiers. These principles lead to the following design for creating good names: Step 1: Names are generated by a group of subjects. Step 2: From the names generated by subjects, the experimenter chooses a subset of the names according to the following criteria: (a) the modal name is chosen, namely, if a particular name is generated more often than others, it is chosen; (b) shorter names are preferred; (c) names chosen stay within the classification system provided by the subjects. Step 3: How good the names are is tested by measuring (1) how well people can match the names with the objects they describe; and (2) how well they can recall the names, given the physical objects. Steps 2 and 3 can be iterated; namely, if a given name is poorly matched or recalled, it can be replaced by another generated name and tested again. The method results in names that form a classification system and that are natural, short, well matched with their physical referents and well recalled. GRA

IDENTIFICATION OF THE ADAPTIVE FEEDBACK OF THE HUMAN MOTOR SYSTEM USING THE RESPONSE DIFFERENCE METHOD (RDM)
Ton Eland Jul. 1981 131 p refs
(WTHD-134) Avail: NTIS HC A06/MF A01

The role of proprioceptive and visual feedback in generating slow, goal directed movements was investigated using a cybernetic model. The physiological structure of the movement control system is reflected by a feedforward path and a parallel feedback loop. Psychological schemata identified in the feedforward path are the internal model of the task, and the internal model of the motor system load. The RDM uses the differences between a routine and a disturbed response to identify the feedback system. The method was tested by computer simulation and a control stick positioning task. Correlation between model and measured results is >0.95. Visual feedback is only used for a continuous readjustment of the proprioceptive position sense. Proprioceptive feedback tuning is dependent of the velocity of the planned movement. The proprioceptive velocity feedback adapts within 130 msec to an increase in the mass which is moved. Proprioceptive feedback does not adapt to a decreasing mass and/or a changing damping of the load. Author (ESA)

In supervisory control situations involving multiple human operators, proper cooperation and coordination is essential In addition to their individual tasks, the operators are jointly responsible for certain tasks It is usually not clear when and who should take responsibility for the joint tasks Proper scheduling of tasks and appropriate allocation of resources are necessary for optimal performance, and in some instances, for overall safety Understanding how multiple operators interact requires the understanding of single operator performance A model based on Pareto optimality and Fuzzy Set theory was developed for the human operation An experimental paradigm had been developed earlier to study the human monitor The scenario used was similar to monitoring the spread of forest fires, and timely identification of threatening conditions Experiments were conducted based on the paradigm Results showed that the operators used updates to reduce the uncertainty to a sufficiently low level before starting threat classification Sites where the probability of damage was close to 0.5 were more difficult to classify Author

PERFORMANCE LIMITS OF INTEGRATED CIRCUIT SIMULATION ON A DEDICATED MINICOMPUTER SYSTEM Ph.D. Thesis
Ellis Cohen 1981 182 p
Avail: Univ. Microfilms Order No. 8200059

An investigation was made concerning the performance limits of circuit-level IC simulation on a dedicated microprogrammable minicomputer system. Investigation shows that circuit analysis can be performed successfully with single precision (32-bit) arithmetic through the use of a combination of numerical pivoting, sparse matrix techniques, a generalization of the indefinite admittance matrix, and voltage thresholds in the algorithms controlling convergence. The use of microcode to extend the computer instruction set greatly improves simulation speed by directly and efficiently performing several of the most time-consuming portions of the analysis. These special instructions reduce the memory requirements compared to larger computers. The development of a new IC simulation program, SPUDS, designed to obtain the best possible performance from a specific minicomputer system has resulted. Conclusions are made concerning the suitability of several microprocessor systems for circuit-level simulation. Dissert. Abstr.

PERFORMANCE EVALUATION OF A MULTIPLE PROCESSOR SYSTEM WITH SHARED BUSSES Ph.D. Thesis
Pauline Markenscoff 1981 283 p
Avail: Univ. Microfilms Order No. 8125990

The performance of a multiple processor system which is suitable for the solution of real time control problems is studied. Deterministic models are developed for such systems. In the case of a single bus it is proved that after a number of task executions the operation of the system becomes cyclic with a constant cycle time. The speed of convergence to this cyclic state is estimated and an expression for the constant cycle time is derived. The processing power is also evaluated and is proved to be independent of the order in which the processors transmit through the bus. Techniques for partitioning the task to maximize the processing power are proposed. In the case of a multiple bus system two different bus scheduling schemes are proposed. A stochastic model equivalent to the deterministic one is studied. It involves the study of a finite population queue with Poisson arrivals and Poisson service times and a special priority service discipline different from those found in the literature. Both equal and unequal average execution and data transmission times for the different subtasks are analyzed. Dissert. Abstr.

COORDINATION OF COMPUTATION IN A BINARY TREE OF PROCESSORS: AN ARCHITECTURAL PROPOSAL Ph.D. Thesis
Donald MacDavid Tolle 1981 230 p
Avail: Univ. Microfilms Order No. 8125627

A design is proposed for a cellular computer consisting of many processors, of two kinds, connected in the form of a binary tree. Both machines are intended for the highly parallel execution of the formal functional programming (FFP) languages of Backus. Both machines, storage permitting, take advantage of all the parallelism expressed in a single program and can execute many programs simultaneously. Both machines, furthermore, decompose each primitive FFP operator into more elementary operations, many of which may be executable concurrently. The machine proposed here uses the syntactic structure of an FFP expression to guide the embedding of a syntactic network of nodes in the binary tree of machine cells. Execution of the FFP program is accomplished through operations performed by the embedded network of nodes. As new FFP expressions are produced during execution of the FFP program, corresponding new syntactic networks are automatically and dynamically embedded and used for further execution. A syntax tree language for programming the embedded syntactic networks is specified in some detail. Dissert. Abstr.

FLEX FIRMWARE
I. F. Currie, P. W. Edwards, and J. M. Foster Sep. 1981 37 p
(RSRE-81009; BR81061) Copyright Avail: Issuing Activity

The instruction set and microcoded aspects of the Flex computer are described. A microprogrammed storage allocation scheme enables the computer to understand procedures. A file store with files of arbitrary structure and mode is possible, based on pointers from the backing store or main store. The data pointed to can contain other pointers. The instruction set facilitates the compilation of high level languages. There is no assembly language. Author (ESA)

THE WORLD WIDE MILITARY COMMAND AND CONTROL INFORMATION SYSTEM: PROBLEMS IN INFORMATION RESOURCE MANAGEMENT Report to the Congress of the United States
19 Oct. 1981 77 p
(AD-A108454; GAO/MASAD-82-2) Avail: NTIS HC A05/MF A01 CSCL 09/2

GAO's evaluation of the World Wide Military Command and Control Information System modernization effort showed that continuing problems associated with providing automated support for command and control functions are not being properly addressed by DOD. DOD's efforts are not yet completed; however, the methods employed and progress to date are unlikely to enable the replacement of the World Wide Military Command and Control Information System to meet its intended goals. Further, these efforts are proceeding far too slowly to be considered responsive to the need to improve current system performance. DOD anticipates 10 more years will be necessary to modernize the system. GAO's evaluation of the modernization program shows that substantial changes are needed in the program's management structure before the system can be fully and effectively modified. Author (GRA)

INVESTIGATION OF LARGE CAPACITY OPTICAL MEMORIES FOR CORRELATOR APPLICATIONS Final Technical Report, 1 Apr. 1978 - 31 Mar. 1981
Kenneth G. Leib and Jay Mendelsohn Oct. 1981 193 p refs
(Contract F49620-78-C-0051; AF Proj. 2305)
(AD-A108585; RE-634; AFOSR-81-0802TR) Avail: NTIS HC A09/MF A01 CSCL 09/2

An investigation of large capacity optical memories was made. The basic memory element, the matched filter, was examined in a number of configurations, including coherent and noncoherent addition, split spectrum, and multiplexed carriers. Three different storage materials were examined: silver halide, dichromated gelatin, and photopolymers. Both thin and thick holographic memories were studied. The matched filters were evaluated using complex terrains such as woodlands, roadsides, and villages in which the principal targets were located. For each terrain and target, the signal to clutter ratio (s/c) was measured. These ranged from 5.5 to 11 dB for the target terrain combinations studied. The complex matched filters that achieved these s/c's were recorded in dichromated gelatin. More than 5 matched filters could be noncoherently added and 15 could be coherently added in the same memory position. Carrier multiplexing could be used to achieve 30 matched filters per memory position. The theoretical limit for memory density of matched filters is 2670 MF/sq cm. Equivalent to 1,000,000 bits of digital data. Modifications of the basic optical matched filter were studied to improve s/c ratio and increase storage density. GRA

SQL FRONT-END FUNCTIONAL DESCRIPTION
10 Nov. 1981 84 p refs
(Contract N00014-81-C-0808)
(AD-A108508; INCO/UP-1-81-83155-U) Avail: NTIS HC A05/MF A01 CSCL 09/2

The IAIPS (Integrated Automated Intelligence Processing System) SQL Front-End System Functional Description is designed to provide the basis for high-level design specification for system implementation. The outline for this description follows the guidelines specified in the Automated Data Systems Documentation Standards issued in DOD Instruction 7935.1. The Navy's interest in database technology has its foundation in its need to manage and access large amounts of data originating from different sources. The IAIPS program, in support of Naval Intelligence, has the further requirement that this data be available to interactive users in near-real-time. This need is expected to be met, in part, by implementation of the relational database model, ORACLE, which provides a user-oriented interface to the large database currently in use. GRA

LITHO SCANNING TECHNIQUES Final Technical Report, 17 Sep. 1980 - 17 May 1981
Andrew V. Douglas, Thomas V. Edwards, Michael J. Gillote, and Marsha L. Rapke Griffiss AFB, N.Y. RADC Sep. 1981 112 p
(Contract F30602-80-C-0316; AF Proj. 3205)
(AD-A108371; RRC-81-001; RADC-TR-81-229) Avail: NTIS HC A06/MF A01 CSCL 08/2

This effort continued to investigate raster processing techniques, referred to as the Automatic Feature Tracking algorithm, demonstrated to be feasible under previous contract to RADC (F30602-78-C-0313). The current effort considered methods of optimizing the algorithm, determined optimal parameters to track various features, and examined alternate templates for the various features. The goal of this contract was to reduce the processing requirements, and hence the processing time, while preserving the quality of the feature tracking results. In addition to performing the feature tracking, various timing simulations were conducted to demonstrate the processing speed that could be achieved using the existing algorithm and off-the-shelf hardware. The tracking of a symbolized railroad feature could be performed at a rate of approximately ten (10) inches per minute if a computer configuration had the appropriate hardware peripherals. The DeAnza IP-5500 Image Display System and the Floating Point Systems AP-120BF are the devices that could achieve that tracking rate. Alternate hardware was examined with possible changes in the template matching algorithm and the template design to further accelerate processing speed of the feature tracking algorithm. WIDEBAND HF CHANNEL ANALYZER Final Technical Report, Mar. 1979 - Jan. 1981
George E. Peo and Phillip A. Bello Jan. 1981 56 p
(Contract N00173-79-C-0090)
(AD-A108694) Avail: NTIS HC A04/MF A01 CSCL 14/2

This document is a final report describing a wideband (1 MHz) HF channel analyzer. The Wideband HF Channel Analyzer is a digital signal processor designed to be used for wideband high-frequency radio channel measurement studies. The analyzer contains analog-to-digital converters, a digital pre-processor, a digital correlator array, a digital post-processor and two computer interfaces. To perform a channel measurement experiment, a transmitter at a remote site broadcasts a pseudo-random number (PN) sequence modulated onto a suitable carrier. After complex demodulation at the receiver, the analyzer measures channel delay by correlating the received sequence with its internal reference. Two modes of operation are provided. The Sounder Mode is used to obtain a preliminary characterization of the channel. The Prober Mode is used to more accurately measure the channel delay characteristics. Author (GRA)

A QUANTITATIVE EVALUATION OF THE FEASIBILITY OF, AND SUITABLE HARDWARE ARCHITECTURE FOR, AN ADAPTIVE PARALLEL FINITE-ELEMENT SYSTEM
Pamela Zave and George E. Cole, Jr. Sep. 1981 46 p refs
(Contract N00014-77-C-0623)
(AD-A108492; BN-971) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper describes an experimental implementation of a design for an adaptive, parallel finite-element system. The implementation was used to simulate the performance of this design on several microprocessor-based multiprocessor architectures. We conclude that it will be possible to build hardware/software finite-element systems which exploit data segmentation to achieve flexibility, modularity, and the ability to process very large problems. (AD-A108275; ESD-TR-81-210) Avail: NTIS HC A04/MF A01 CSCL 17/1

This Semiannual Technical Summary reports work in the Distributed Sensor Networks program for the period 1 October 1980 through 31 March 1981. Status of the development and deployment of the DSN acoustic test bed and implementation of a real-time DSN capability using the test bed are reported. DSN communication requirements have been reviewed and a preliminary design has been completed for a communication channel structure and for protocols to provide the needed services. Simulation and analytical results have been obtained confirming the performance of the proposed distributed random-access scheme for local broadcast. Progress is reported on design studies directed toward an advanced nodal processor and software design and development efforts directed toward solving problems associated with distributed software systems. THE DESIGN OF AN INTERFACE TO A PROGRAMMING SYSTEM AND MENUNIX: A MENU BASED INTERFACE TO UNIX (USER MANUAL)
Gary Perlman Nov. 1981 19 p refs
(Contract N00014-79-C-0323; NR Proj. 157-437)
(AD-A108929; Rept-8105) Avail: NTIS HC A02/MF A01 CSCL 09/2

This report consists of two papers on MENUNIX, an experimental interface to the programs and files on the UNIX operating system. In the first paper, I discuss how the decisions about the design of MENUNIX were made: based on my intuitions and user comments, but also on psychological theory and data whenever available. MENUNIX presents both the programs and files of UNIX in two menus from which users can make selections with single keypresses. The FILE menu presents the UNIX file hierarchy that allows users to organize files into directories by subject (e.g., writing and programming). The PROGRAM menu presents UNIX programs in a hierarchy organized into workbenches according to the tasks for which they are used (e.g., writing and programming) much as files can be organized in directories. Special facilities are provided for: finding out about useful commands; using variables to set options, to save commands, and to avoid typing long strings; and for editing strings (including recent commands). The second paper is a tutorial user manual for MENUNIX, in which the features of the program are more fully explained.

A RE-USABLE CODE GENERATOR FOR PRIME 50-SERIES COMPUTERS
T. Allen Akin Aug. 1981 40 p refs
(Contract N00014-79-C-0873; GIT Proj. G36-643)
(AD-A108820; GIT-ICS-81/16) Avail: NTIS HC A03/MF A01 CSCL 09/2

This thesis describes the design and implementation of a language-independent reuseable code generator for Prime 400 and 50-Series computers. A code generator is the portion of a compiler that converts an internal representation of the semantics of a program into equivalent machine code. Construction of a code generator requires a major effort, so it should be done as infrequently as possible. One way to make this possible is to build a code generator that may be re-used from compiler to compiler. Several factors influence the design of such a code generator, including the nature of the communications channel between the code generator and the rest of the compiler, the structure of the information passed to the code generator (the 'intermediate form'), the form of output code desired, and finally the limitations of the machine architecture and existing systems software. The code generator implemented processes a high-level, tree-structured intermediate form, performing translation by case analysis and optimization by eliminating redundant load operations. It produces a stream of assembly language source code which may then be assembled, loaded, and executed. Experience with two compiler implementations has shown that the reusable code generator approach is feasibile. However, several improvements in the present code generator would be desirable.

A SIMULATION TOOL FOR DISTRIBUTED DATABASES
Nancy D. Griffeth Sep. 1981 32 p refs
(Contract N00014-79-C-0873; GIT Proj. G36-643)
(AD-A108819; GIT-ICS-81/15) Avail: NTIS HC A03/MF A01 CSCL 09/2

An experimental software tool for simulating the behavior of distributed algorithms is proposed. The primary motivation for developing the tool is to study distributed database algorithms. Also, a classification of techniques presently used for distributed database problems of concurrency control and recovery is presented. This classification will be used to reduce the experimentation necessary to compare the performance of alternative algorithms. The study and development of distributed algorithms in general and distributed database algorithms in particular is behavior of distributed systems. Both intuition and present-day analytical tools are inadequate to characterize their behavior. Another barrier to understanding such algorithms is the complexity of their interaction, due to the potential lack of synchronization between nodes of a distributed system. Finally, it is not yet clear what 'good' behaviors are reasonable to expect from a distributed system. As a result, a multitude of algorithms may exist for solving a single problem, but without more experience and analysis, their behavior cannot be well understood or compared. This report describes an approach to providing the experience necessary for understanding the behavior of these algorithms.

Decision making policies on the installation of a communication system in a large organization are discussed. Cost analysis, feasibility studies of real factors, and quantifiable volumes, which are future oriented ways of thinking are considered. It is shown that 60% of management problems are caused, as a whole or partially, by faulty communications. The steadily growing volumes of written and verbal information and the joint communication field are considered. Installation of a facsimile copying machine is investigated. The technical development and the practical implications of the text telecommunication is reviewed.

SELECTING SUFFICIENT SETS OF TEST PATHS FOR PROGRAM TESTING Ph.D. Thesis
Steven Joseph Zeil 1981 143 p
Avail: Univ. Microfilms Order No. 8129127

Many strategies for testing computer programs require the selection of a set of paths along which testing will be conducted. Ideally, a finite set of paths would be chosen, sufficient to detect any error in the program construct being tested. The problem of finding such a set of paths is unsolvable. The existence of such a set cannot be guaranteed. However, when the set of possible functions forms a vector space, it may be possible to characterize the set of errors which escape detection for a given test path. Such a characterization permits the comparison of candidate paths for use in testing, and guarantees the existence of a finite sufficient set of test paths. If predicate interpretations are guaranteed to be linear functions, then the number of paths required to reliably test any predicate is no larger than m + n, where m is the number of inputs to the program and n the umber of variables. If the set of program computations is linear, then no more than n(m + n + 1) paths would be required to test a block of computations. These characterizations provide a theoretically rigorous means of evaluating proposed test paths.

NUMERICAL TECHNIQUES FOR INVERSE PROBLEMS Ph.D. Thesis
Charles Mark Aulick 1981 97 p
Avail: Univ. Microfilms Order No. 8129834

An overview of three major categories of inverse problem solution techniques, and a common framework in which to compare and analyze them is presented. A finite-dimensional, discrete model which may prove useful in describing many types of inverse problems in different application areas is examined. Once an inverse problem has been reduced to solving the matrix equation Fh = sigma where F and sigma are given, and sigma is subject to measurement error, various techniques may be used to define and calculate a solution. Regularization is one method which may be used. An approach is formulated for generating regularizing functions, from which many different classical methods may be shown to be derivable in a simple fashion. A statistical approach may be used to solve the problem, by viewing the vectors h and sigma as random vectors. Another approach is to restrict the solution space, which may be thought of as finite Fourier analysis. Dissert. Abstr.

A METHODOLOGY FOR THE EVALUATION OF LANGUAGES FOR THE DEVELOPMENT OF INFORMATION SYSTEM PERFORMANCE MODELS Ph.D. Thesis
Jan Alexander Aitken 1981 211 p
Avail: Univ. Microfilms Order No. 8128951

A strategy was developed which can be used to assist the information system analyst/modeler in evaluating alternative languages for use in developing performance models of computer-based information systems and in choosing the most appropriate language based on the applicability of language capabilities to problem modeling requirements and the availability of modeler skills and resources. The language evaluation strategy provides: (1) approaches to the characterization of the modeling requirements of a particular information system design/analysis problem, the modeler resources available to perform the modeling task, and the features and capabilities of a modeling language relative to its support for information system modeling; (2) measures for language evaluation; and (3) a methodology for evaluating candidate modeling languages based on their applicability to particular information system modeling requirements.
Dissert. Abstr.

SYNTAX ORIENTED ANALYSIS OF THE RUN TIME PERFORMANCE OF PROGRAMS Ph.D. Thesis
Luis Felipe Cabrera 1981 206 p
Avail: Univ. Microfilms Order No. 8200042

The problem of finding efficient ways to determine, given the values for the input variables, the values of various performance indices associated with a program is investigated. The dynamic profile of the program is reproduced. Using the profile together with a data base of program performance information enables us to find the actual values of most of the desired performance indices. Several kinds of performance representations of programs are described which express the profile equations of the program. It is shown that it is possible to represent the profile equations by program performance formulae, whose evaluation time is linear in the length of their expressions. This is easily seen to be the best one can hope to obtain. It is seen that for compute bound sequential programs, the running time of the skeleton can be substantially shorter than that of running an instrumented version of the original program. Examples are presented which show that the running time of the skeleton need not be linear in the length of its text and in some cases is very close to the running time of the actual program. Dissert. Abstr.

TWO APPROACHES TO DEADLOCK IN DISTRIBUTED SYSTEMS Ph.D. Thesis
Laura Myers Haas 1981 76 p refs
Avail: Univ. Microfilms Order No. 812863

Deadlock occurs when a set of processes is unable to proceed because each process needs to communicate with another member of the set, and no two processes in the set are waiting to communicate with each other. Two possible approaches to deadlock, detection and prevention are investigated. In the area of detection, a distributed deadlock detection algorithm is proposed. The algorithm is proven correct. It is proven both to detect all deadlocks which might occur and not to falsely detect deadlocks which do not exist. The algorithm applies the Dijkstra-Scholten algorithm for detecting termination of diffusing computations over static graphics to the dynamic structure of a wait for graph. In the area of prevention, a methodology for using a deadlock absence proof technique is developed.

THE HUMAN AS A CONSTRAINED OPTIMAL TEXT EDITOR Ph.D. Thesis
John Maynard Hammer 1981 89 p
Avail: Univ. Microfilms Order No. 8127600

The editing of thirty users--ten on each of three editors--was collected by monitoring all terminal input and output. The data was divided into a derivation and a validation data set. The ten different users' problems in the derivation data were solved with the constrained optimal model. Keystrokes in excess of this solution were categorized as feedback requests, inappropriate command selection, or human error. These categories were iteratively refined and then frozen for analysis of the validation data. The model--a constrained optimal solution plus the descriptive categories--explained 85 to 95 percent of the keystrokes in both data sets. Significant differences among editors

were found in the percentage of keystrokes due to feedback requests and in the ratio of optimal to constrained optimal performance. In addition, several recommendations were developed for improving the human factors of text editors.

COMPUTATIONAL MODELING OF EVOLUTIONARY LEARNING Ph.D. Thesis
Roberto Raul Kampfner 1981 182 p
Avail: Univ. Microfilms Order No. 8125143

A conceptual model of evolutionary learning in the brain, namely, M. Conrad's evolutionary selection circuits model, is studied using a constructive experimental approach involving computational modeling and simulation. In the conceptual model, networks of formal (enzymatic) neurons develop adaptations based on a process similar to evolution by variation and selection. The behavior of such networks can be changed by modifying the firing properties of the neurons they contain. The firing properties of such neurons are controlled by macromolecules (called excitases) which catalyze events leading to impulse formation in response to specific patterns of dendritic inputs. A basic version of the learning algorithm was developed which yields an effective performance. Simulation experiments on the learning of pattern classification tasks indicated that single neuron networks learn this type of task more efficiently than redundant networks do. Some simulations indicated that learning tasks interpreted as motor control processes are handled efficiently by the learning algorithm.

SELF-CHECKING PROGRAMS: AN AXIOMATIC APPROACH TO THE VALIDATION OF PROGRAMS BY THE USE OF ASSERTIONS Ph.D. Thesis
Ali Mili 1981 190 p
Avail: Univ. Microfilms Order No. 8127645

The development and investigation of a methodology for program design and verification is discussed. The design part is described by a step-wise refinement process. The verification part is described by a set of Induction Rules. The distinguishing feature of this methodology is that it produces programs which are not proven to be correct but to have a property that is weaker than correctness: The Self-Checking Property. The self-checking Property is based on a systematic of assertions and is defined as follows: A program is said to be self-checking if and only if it can be proved that any time it is executed on some input data and all assertions return True when they are checked for, then the output obtained is correct. An example of design and verification of a self-checking program performing Gaussian elimination is shown. It is stressed that very little effort is needed for the verification of its self-checking property.

TOPICS IN COMPUTATIONAL GEOMETRY Ph.D. Thesis
Kenneth Jay Supowit 1981 187 p
Avail: Univ. Microfilms Order No. 8127711

Analyses of algorithms and complexity results for certain geometrical problems are presented. The problems of finding a minimum weighted matching and a minimum traveling salesman tour of n points in a square in the plane are considered. The performance of certain fast heuristics for these two problems is analyzed. The computation of the relative neighborhood graph of a finite set V of n points in Euclidean space is then addressed. Various geometric covering problems are considered; in particular, problems whose input is a finite set of points in Euclidean space and whose output is a set of balls whose union contains the input points. A heuristic technique is described that can be applied to a wide class of covering problems, among them the smallest bomb problem, the smallest enclosing circular problem, and the largest empty circle problem. Finally, several point covering problems are shown to be NP-hard, including the k-police station problem.

STUDY OF HIGH SPEED COMPLEX NUMBER ALGORITHMS Final Report
Rodney Heisler [1981] 44 p refs
(Contracts NAS5-25994; NAS5-22563)
(NASA-CR-166743) Avail: NTIS HC A03/MF A01 CSCL 09B

A method of evaluating the radiation integral on the curved surface of a reflecting antenna is presented. A three dimensional Fourier transform approach is used to generate a two dimensional radiation cross-section along a planer cut at any angle phi through the far field pattern. Salient to the method is an algorithm for evaluating a subset of the total three dimensional discrete Fourier transform results. The subset elements are selectively evaluated to yield data along a geometric plane of constant. The algorithm is extremely efficient so that computation of the induced surface currents via the physical optics approximation dominates the computer time required to compute a radiation pattern. Application to paraboloid reflectors with off-focus feeds in presented, but the method is easily extended to offset antenna systems and reflectors of arbitrary shapes. Numerical results were computed for both gain and phase and are compared with other published work.

AN AUTOMATED DATA MANAGEMENT/ANALYSIS SYSTEM FOR SPACE SHUTTLE ORBITER TILES
Gary L. Giles and Maria Ballas Jan. 1982 92 p refs
(NASA-TM-83261) Avail: NTIS HC A05/MF A01 CSCL 09B

An engineering data management system was combined with a nonlinear stress analysis program to provide a capability for analyzing a large number of tiles on the space shuttle orbiter. Tile geometry data and all data necessary of define the tile loads environment accessed automatically as needed for the analysis of a particular tile or a set of tiles. User documentation provided includes: (1) description of computer programs and data files contained in the system; (2) definitions of all engineering data stored in the data base; (3) characteristics of the tile anaytical model; (4) instructions for preparation of user input; and (5) a sample problem to illustrate use of the system. Description of data, computer programs, and analytical models of the tile are sufficiently detailed to guide extension of the system to include additional zones of tiles and/or additional types of analyses.

EFFECT OF AUTOMATIC PROCESSING ON SPECIFICATION OF PROBLEM SOLUTIONS FOR COMPUTER PROGRAMS Technical Report, 1 Sep. 1979 - 1 Mar. 1981

Edward M. Connelly, Robert F. Comeau, and Pamela Johnson Mar. 1981 125 p refs
(Contract N00014-79-C-0739; RR0420901)
(AD-A108570; PMA-81-361) Avail: NTIS HC A06/MF A01 CSCL 09/2

The ability of computer users to specify problem solutions with the help of example solutions was investigated as a function of the user's background and experience, various levels of processing and various levels of problem complexity. Two participant groups (programmers and bookkeepers/accountants) working with three levels of problem complexity and three levels of processor complexity were used. The experiment task employed in this study required specification of a logic for selection of a Navy Task force. The results showed that specification of problem solutions by example-solutions led to low rates of errors-of-commission. Further, the rate of errors-of-omission was significantly affected by the degree of generalization of the example inputs by the automatic processor. The results also suggested that the strategy used in developing the example solutions may be a significant factor in the generation of accurate problem solution specificaions. GRA

A-7E SOFTWARE MODULE GUIDE Interim Report

K. H. Britton and D. L. Parnas 8 Dec. 1981 36 p refs
(AD-A108649; NRL-MR-4702) Avail: NTIS HC A03/MF A01 CSCL 09/2

This document describes the basic organization of NRL's version of the A-7E onboard flight software. The report describes a structure in which modules have been designed in accordance with the Information Hiding Principle. Because of the larger number of modules that result when this principle is applied, the modules are arranged in a hierarchy. The hierarchy should simplify the task of a maintenance programmer assigned to make a specific modification. The document also describes the principles used in the design of the software. It is intended to be useful both as a guide to the A-7E software and as a model for those developing other software systems. Author (GRA)

A HEURISTIC FOR DERIVING LOOP FUNCTIONS

Douglas D. Dunlop and Victor R. Basili Oct. 1981 54 p refs
(Contract F49620-80-C-0001; AF Proj. 2304)
(AD-A108660; TR-1115; AFOSR-81-0793TR) Avail: NTIS HC A04/MF A01 CSCL 09/2

The problem of analyzing an initialized loop and verifying that the program computes some particular function of its inputs is addressed. A heuristic technique for solving these problems is proposed which appears to work well in many commonly occurring cases. The use of the technique is illustrated with a number of applications. A hierarchy of initialized loops is suggested which is based on the 'effort' required to apply this methodology in a deterministic (i.e., guaranteed to succeed) manner. It is explained that in any case, the success of the proposed heuristic relies on the loop exhibiting a 'reasonable' form of behavior. An informal categorization of such programs is made which is based on two opposing problem solving strategies. It is suggested that our heuristic is naturally suited for use on programs in one of these categories. Author (GRA)

SYSTEM CONTROL PROCEDURE DEVELOPMENT FOR A DISTRIBUTED MICROCOMPUTER NETWORK FOR AVIONICS UTILIZING A NON-RESPONSIVE TIME-DIVISION MULTIPLEXED BUS AS THE INTER-COMPUTER COMMUNICATION LINK Ph.D. Thesis
Dieter Josef Schiller 1981 310 p
Avail: Univ. Microfilms Order No. 8127850

Commercially available bit slice microprocessors in a totally distributed network are used for avionic systems. By dedicating microcomputers to perform various avionic functions and placing these microcomputers close to the sensors with which they interact, system capability is sharply increased due to parallel processing and reduced bus traffic. The bus loading is further reduced by employing the broadcast mode which permits multiple receivers for each message. The system design philosophy is described along with the detailed description of the bus control interface unit. The flow charts for the normal operation of the local executive, the global executive and the actual code for both executives are presented. Tests were constructed to exercise every possible mode of operation of the executive. A description of these tests is provided. Fault detection and fault recovery procedures are emphasized.

PROCEDURE BASED GENERALIZED INTERACTIVE SYSTEMS Ph.D. Thesis
Dan Reed Olsen, Jr. 1981 283 p
Avail: Univ. Microfilms Order No. 8127057

A language for writing interactive systems that are independent of the applications that they service is described. Two general interactive processers were designed based on the GINTAC language. The first is a general expression parser. The command languages of several timesharing systems could be implemented using it. The second interactive processer supports a graphical interaction. It provides automatic menu generation, function button management and automatic user feedback. The picking of objects from a display screen can be used to specify operands for expressions. In addition, it is shown how the strong typing of the expressions can resolve ambiguity that occurs when pointing at heirarchicly defined pictures. This system can be used to implement several graphical applications drawn from the literature. These two systems serve only to demonstrate this technique not to define the full extent of its capabilities.

OPTIMAL CONTROL OF AN M/G/1 QUEUEING SYSTEM [CONTROLE OTIMO DE UMA FILA M/G/1]
Fernando Augusto Silva Marins and Paulo Renato deMorais Jul. 1981 13 p refs In PORTUGUESE; ENGLISH summary Presented at the 14th Brazilian Symp. on Operations Res., Vitoria ES, Brazil, 13-14 Oct. 1981
(INPE-2139-RPE/362) Avail: NTIS HC A02/MF A01

The optimal control of the arrival and service processes of an M/G/1 queueing system is studied. Based on the residual workload, at each instant of time a decision has to be made whether to maintain the facility open and use a determined service rate or to close it and attend the queue at a higher rate. The reward structure includes rewards associated with each one of the two possible services rates and a holding cost proportional to the residual workload. An optimal control policy which maximizes the long run expected average return is investigated.

MATRIX DATA ANALYSIS: COLOR/B AND W CODING IS NOT ALWAYS ENOUGH Interim Report, 1976 - 1981
Marshall B. Faintich 1981 6 p refs
(AD-A108406) Avail: NTIS HC A02/MF A01 CSCL 09/2

The Defense Mapping Agency produces digital data bases that describe the physical appearance of the surface of the Earth. These data bases include, but are not limited to, terrain elevation, culture including landscape characteristics, and vertical features. This data is collected from digitized source maps, from optically or digitally correlated stereopairs of photographic imagery, and from digital multi-spectral sensor data. A dramatic impact has been made in the ability to analyze these digital data bases by applying state-of-the-art digital image technology processing and display concepts. These include a variety of color and/or black and white displays of not only intensity/color coded matrix data, but also image processed data using specialized convolution filters, texture discrimination, and special color representation techniques. In addition, computer generated imagery from these data bases serve as a final analysis tool.

PROFILING SENSITIVITY TO IMAGE QUALITY Final Report
Dennis E. Moellman Oct. 1981 21 p refs
(AD-A108405) Avail: NTIS HC A02/MF A01 CSCL 09/2

This paper reports results from a study conducted by the Defense Mapping Agency (DMA) to determine the sensitivity of terrain profiling accuracy to input image quality. The study was accomplished by building a set of stereo test models over a test site; exercising those test models with current instruments; reducing the resultant profile data and comparing the results to existing ground control for the test site. The test models were produced from a single model by repeated steps of photographic enlargement, reduction and resolution degradation. The resultant 25 test models represented all combinations of five specific image scales and resolutions. The instruments were operated in both manual and automatic correlation modes. As a consequence the results portray the interdependence of profile accuracy with both scale and resolution as well as the effects of both manual and automatic profiling. The results also provide insight into the behavior of automatic correlation when approaching and exceeding the instrument's theoretical minimum resolution threshold.

DISTRIBUTED ARTIFICIAL INTELLIGENCE
Nils J. Nilsson 25 Mar. 1981 13 p refs
(Contract N00014-80-C-0296; SRI Proj. 1350)
(AD-A108734) Avail: NTIS HC A02/MF A01 CSCL 06/4

This report examines a number of advanced military information processing problems that entail computational tasks distributed over space. Communicational restrictions and other factors in these applications make it appropriate to consider networks of loosely coupled distributed artificial-intelligence (DAI) systems. Among the important conceptual difficulties of designing such networks is the problem of representing and using information about what one part of the network 'believes' about another part. We consider in some detail various aspects of this problem and briefly describe some potential solutions. GRA

PLAN SYNTHESIS: A LOGICAL PERSPECTIVE
Stanley J. Rosenchein Mar. 1981 21 p refs
(Contract N00014-80-C-0296)
(AD-A108733) Avail: NTIS HC A02/MF A01 CSCL 12/1

This paper explores some theoretical issues of robot planning from the perspective of propositional dynamic logic. A generalized notion of 'progression' and 'regression' of conditions through actions is developed. This leads to a bidirectional single-level planning algorithm which is easily extended to hierarchical planning. Multiple pre/post-condition pairs, complex (conjunctive, disjunctive) goals, goals of maintenance and prevention, and plans with tests are all handled in a natural way. The logical framework is used to clarify gaps in existing 'nonlinear' and 'hierarchical' planning strategies. Author (GRA)

A PRF SORTER BASED ON LIST MANIPULATION TECHNIQUES Interim Report
J. O. Coleman 20 Nov. 1981 62 p refs
(XF12151104)
(AD-A108365; NRL-8514) Avail: NTIS HC A04/MF A01 CSCL 09/2

This report describes a program that uses list processing techniques to sort pulses into sequences uniformly spaced in time, a process referred to as PRF sorting. The detailed discussion of the program's operation is based on a LISP implementation that functions on a demonstration level. A listing of a PASCAL version capable of operation on real data is also given. The unique feature of the algorithm used here is the ability to postpone the decision to assign a pulse to a particular existing pulse train. This is achieved by duplicating the existing pulse train and assigning the pulse to one of the two resulting pulse trains. Both pulse trains are then carried in the system, with equal status, until eventually a decision is made as to which is correct. The list structures used, native to LISP, prevent the duplication of pulse trains from resulting in unreasonable storage requirements. Author (GRA)

FLEXIBLE PARSING Annual Report, 1 Jul. 1980 - 30 Jun. 1981
Philip J. Hayes and Raj Reddy 12 Oct. 1981 16 p refs
(Contract F49620-79-C-0143; AF Proj. 2304)
(AD-A109076; AFOSR-81-0852TR) Avail: NTIS HC A02/MF A01 CSCL 09/2

In the first phase, the implementation of the FlexP parser was completed according to the design described in last year's annual report, and was evaluated through use in a gracefully interacting interface. This application showed: that FlexP was able to parse both grammatical and ungrammatical input according to a simple grammar of pattern-matching rewrite rules, that the bottom-up approach of FlexP was helpful in the case of ungrammatical input, and that a grammar suitable for use by FlexP could be defined in terms natural to the domain of interaction of the interface. However, the experimental use of FlexP also made it clear that FlexP had certain problems, largely due to the uniform nature of its grammar. In the second phase, the set of design choices on which FlexP was based was reviewed to determine if it was possible to resolve the problems that FlexP had without also losing the desirable aspects of its performance. This review led to the replacement of a single parsing strategy based on linear pattern matching with an approach based on multiple construction-specific parsing strategies. This approach was evaluated in a preliminary way through the construction of two small parsers, CASPAR and DYPAR, and was found to show considerable promise. Accordingly, design based on the same approach was begun for a more complete parser for restricted domain natural languages, and for a parser oriented towards an artificial command language of the type common in interactive user interfaces. PROCESSING AND CORRELATION OF DIGITALIZED

IMAGES IN A SPECTRAL RANGE [VERARBEITUNG UND LORRELATION VON DIGITALISIERTEN BILDERN IM SPEKTRALBEREICH]
Hermann Widjaja and H. Rainee Grundmann 14 Aug. 1981 8 p In GERMAN Presented at Colloq. on Theorie und Anwending der Signalverarbeitung, Aachen, 30 Sep. - 2 Oct. 1981
(MBB-UA-596-81-O) Avail: NTIS HC A02/MF A01

Digital methods to solve problems in direct correlations and correlation through two dimensional FFT were examined. Two dimensional signal processing consists of the correlation of two gray tone pictures, which take distinctively different positions, and have different measurement and orientation characteristics. These problems are often solved by real time conditions which occur in many different situations like: conveyor belts automation by industrial robots, signal recognition, tracking of moving objects, plotting from aerial photography, and image processing in medicine. MAN/COMPUTER COMMUNICATION: FROM ARTIFICIAL INTELLIGENCE AND BEHAVIORAL SCIENCE PERSPECTIVES
Lena Linde Oct. 1981 30 p refs
(FOA-C-53005-H2) Avail: NTIS HC A03/MF A01

Literature on artificial intelligence and behavioral aspects of command language interactions and data base systems is reviewed. Computational models of human dialogs, computerized information retrieval, and cognitive models of computerized tasks such as text editing are discussed. Man-computer communication problems are considered from end and miduser perspectives. The difficulty of a formal query language is related to the degree of correspondence between the order of expressing query components in the formal language and the natural cognitive structure of the query components. More planning and knowledge of complex syntactic rules is required for translating an information request into a formal query than for using a command language, e.g., for editing. Author (ESA)

ROBUSTNESS IN MULTIVARIABLE CONTROL SYSTEM DESIGN
Anthony Michael Bloch and Ian Postlethwaite 1981 156 p refs
(PB82-121401; CUED/F-CAMS/TR-215-1981; ISSN-0309-765X) Avail: NTIS HC A08/MF A01 CSCL 12A

The design of linear multivariable feedback systems is examined. The robustness properties of a plant at both its input and output are studied and the ability of these design methods to achieve these important properties are compared. The design methods were applied to several examples of control systems. The robustness properties of a system are those properties due to system feedback. A robust system was good stability and performance properties. In general, a system is robust if good feedback properties are maintained in the face of unstructured uncertainties and perturbations which are not necessarily small, and may be dynamic. GRA

A STOCHASTIC APPROACH TO GLOBAL ERROR ESTIMATION IN THE NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS
Atair Rios Neto and Nei Cardoso Cardenuto Dec. 1981 15 p refs Presented at the Symp. and Workshop, Dyn. of Planets Satellites, Sao Paulo, Brazil, Dec. 1981
(INPE-2290-PRE/065) Avail: NTIS HC A02/MF A01

A stochastic scheme is proposed to estimate the order of magnitude of global errors in the numerical integration of ordinary differential equations initial value problems. A Markov stochastic vector sequence is modeled with variances in each discretization time that constrains the order of magnitude of the global error vector components to be within estimated limits with 99% probability. This is done by properly discretizing the dynamic given by the system first order variational equations and by properly perturbing the dynamics with white noise derived from local estimates of truncation and round off errors. The procedure to implement the scheme when Runge-Kutta embedded formulas of two consecutive orders are used is presented. S.L.

SOLUTION OF LARGE SETS OF LINEAR EQUATIONS USING CELLULAR ARRAYS Ph.D. Thesis
James Walter Fawcett 1981 227 p
Avail: Univ. Microfilms Order No. 8123899

The decomposition of large, sparsely populated sets of linear algebraic equations, using cellular arrays to achieve parallel and pipelined computation of solutions is addressed. Cellular arrays are regular structures of computing and memory elements with fixed and simple modes of communication and control. These structures are used to execute mathematical operations on arrays of data without specifically programming each of the data manipulations, and to carry out these operations at speeds which would be unattainable with sequential processing methods. The performance of alternate efficient solution procedures are examined by complexity and timing analyses. These procedures entail the use of parallel and pipelined computations, and also use structural properties of the equation sets for which solutions are required. Graph theoretic methods are used to examine techniques for extracting a dense substructure from sparse equation models. This allows the cellular arrays to manipulate blocks and bands of data, which contain all of the model nonzeros, much more efficiently than operating on the model as a whole. Dissert. Abstr.

AN ERROR ANALYSIS FOR SINGULAR FINITE ELEMENTS Ph.D. Thesis
John Richard OLeary 1981 297 p
Avail: Univ. Microfilms Order No. 8128668

The question of convergence for the finite element method when singular (crack tip) elements are employed in the construction of the approximation subspace is addressed. A-priori and a-posteriori error estimates are developed for a model boundary value defined over a plane domain with a reentrant corner. The a-priori estimates are given in terms of either the global energy norm or the maximum norm over an interior subdomain. This latter sure allows for the development of error estimates on approximations for the strength intensity factor when obtained as an internal degree of freedom for the singular element. Verification of these results is obtained by extensive numerical experiments on a suitably constructed singular ordinary differential equation. The a-posteriori estimate is obtained in terms of a computationally convenient measure suitable for employment in a self-adaptive mesh refinement scheme. Dissert. Abstr.

CHANGING THE FUZZY RULE OF DETACHMENT
Orion de Oliveira Silva and Celso de Rennae Souza Nov. 1981 16 p refs Proposed for presentation at 12th Intern. Symp. on Multiple Valued Logic, Paris, May 1982
(INPE-2266-PRE/047) Avail: NTIS HC A02/MF A01

It is noted that the fuzzy 'modus ponens' rule has the counterintuitive property of not reproducing the conclusion when the premise is asserted. A ternary operator is proposed to replace the bounded sum operator (+ in circle), also allowing for a degree of confidence associated with the implication. Another consistent binary operator is proposed, permitting the association of degrees of confidence to premises and conclusion. M.G.

GENERALIZING SPECIFICATIONS FOR UNIFORMLY IMPLEMENTED LOOPS Ph.D. Thesis

Douglas D. Dunlop and Victor R. Basili Oct. 1981 41 p refs
(Contract F49620-80-C-0001; AF Proj. 2304)
(AD-A108585; TR-1116; AFOSR-81-0791TR) Copyright. Avail: Issuing Activity CSCL 12/1

The problem of generalizing functional specifications for WHILE loops is considered. This problem occurs frequently when trying to verify that an initialized loop satisfies some functional specification, i.e., produces outputs which are some function of the program inputs. The notion of a valid generalization of a loop specification is defined. A particularly simple valid generalization, a base generalization, is discussed. A property of many commonly occurring WHILE loops that of being uniformly implemented, is defined. A technique is presented which exploits this property in order to systemically achieve a valid generalization of the loop specification. Two classes of uniformly implemented loops which are particularly susceptible to this form of analysis are defined and discussed. The use of the proposed technique is illustrated with a number of applications. Finally, an implication of the concept of uniform loop implementation for the validation of the obtained generalization is explained. Author (GRA)

Results for stiff differential equation include: (1) For all k > or = 1, the (k-1)-parameter family of all A-contractive k-step formulas of order of accuracy p = 2 was derived for variable steps. A-contractive one-leg methods are guaranteed to be stable for the variable coefficient test problem x(dot) = lambda (t)X with any lambda(t), Re lambda(t) < or = 0, and arbitrary step sequences; (2) A stability theorem was proved for A sub 0-contractive one-leg methods applied to diagonally dominant (but not necessarily monotone) nonlinear systems; (3) A procedure was devised for selecting an A-contractive two-step method at every step of the integration in such a way as to minimize a global error bound; and (4) It was shown that the sets of all A-stable and A-contractive formulas with p = k = 2 can be identified by a local analysis in the transfer or time domain pertaining to slowly varying oscillatory solutions. Results on Josephson equations include: (1) The response of an extended junction to a time-dependent quasi-periodic voltage source was studied analytically; (2) The numerical procedure for studying the response of the two-junction inteferometer was modified to increase its accuracy and efficiency. COMPUTABLE OPTIMAL VALUE BOUNDS AND SOLUTION VECTOR ESTIMATES FOR GENERAL PARAMETRIC NLP PROGRAMS

Anthony V. Fiacco Aug. 1981 38 p refs
(Contract N00014-75-C-0729; Grant NSF ENG-79-06104)
(AD-A108229; SERIAL-T-451) Avail: NTIS HC A03/MF A01 CSCL 12/1

A simple technique is proposed for calculating piecewise-linear continuous global upper and lower parametric bounds on the optimal value of nonlinear parametric programs that have a convex or concave optimal value function. This provides a procedure for calculating parametric optimal value bounds for general nonconvex parametric programs, whenever convex or concave underestimating or overestimating problems can be constructed. For the jointly convex program, this approach leads immediately to the construction of a parametric feasible vector yielding a computable and generally sharper nonlinear optimal value upper parametric bound. Connections and extensions of well-known duality results are developed that lead to constructive interpretations of the bounds results and generally sharper nonlinear parametric lower bounds. STABILIZATION OF THE NUMERICAL INTEGRATION OF EQUATIONS OF MOTION Ph.D. Thesis - Tech. Univ. Carolo-Wilhelmina, Brunswick

Wolfgang vonGruenhagen Sep. 1981 131 p refs Transl. into ENGLISH from "Zur Stabilisierung der numerischen Integration von Bewegungsgleichungen" Rept. DFVLR-FB-79-14 DFVLR, Brunswick, Nov. 1979
(ESA-TT-676; DFVLR-FB-79-41) Avail: NTIS HC A07/MF A01; DFVLR, Cologne DM 24,70

Numerical stability is investigated through the numerical integration of motion equations subject to holonomic secondary conditions. The accuracy of the numerical solution is measured by the error in the energy balance. An example of four oscillations shows that in cases having physical instability, the numerical instabilities can be ignored. In systems with a first integral, the way in which numerical perturbations lead to degradation of this integral are described. In good approximations, the perturbations can be taken as constant. When the explicit transformation of a mechanical system to action and angle variables is possible, the Hamiltonian function can be so manipulated that it is linear in the action variables. The equation of motion that results has stable solutions. The example of free symmetric gyroscopes shows that when all the frequencies of the system except one are functions of elements, a complete stabilization can always be carried out through the homogenous Hamiltonian formalism.

SOME DIRICHLET SERIES WHOSE POLES ARE RELATED TO CUSP FORMS

Dennis A. Hejhal 1981 30 p refs
(Grant NSF MCS-78-27377)
(CTH-Math-1981-14) Avail: NTIS HC A03/MF A01

After a detailed analysis of the general case, results are specialized to the case of PSL (Z, Z). Let Gamma/H be a Fuchsian group with finite non-Euclidean area. Consider Gamma as a discrete subgroup of PSL (Z, the set of all real numbers). It is indicated what happens when the resolvent kernel G sub s is integrated along C sub 1 X C sub Z, the C sub j being certain paths in H closely related to hyperbolic elements. Similar manipulations for the case of parabolic C sub j lead to Dirichlet series involving Kloosterman sums. In either case, the essential point is that Dirichlet series whose singularities are closely related to eigenvalues of the Laplacian for Gamma/H are obtained. The number theoretical content of these general techniques provide insight into what happens when one C sub j is taken to be hyperbolic, the other parabolic. It is evident that the cusp forms for PSL (Z, Z) are intimately related to the distribution properties of (y squared) congruent to D mod L for L tends to infinity.

ON CERTAIN CONNECTIONS BETWEEN: INFINITE ZEROS OF PROPER RATIONAL MATRICES, DYNAMIC EQUIVALENCE AND THE INTERACTOR

A. I. G. Vardulakis 1981 22 p refs
(PB82-114513; CUED/F-CAMS/TR-211-1981;
ISSN-0309-765X) Avail: NTIS HC A02/MF A01 CSCL 12A

The infinite zero structure (IZS) of full rank, proper, rectangular (p. x. m) rational matrices is examined. Starting with some algebraic definitions regarding the zeros at infinity (and their degrees) of proper rational matrices, it is shown that the IZS of a proper rational matrix describing a linear multivariable system is invariant under state feedback. The dynamic equivalence class (T(s))S of a proper rational matrix T(s) is then considered. Based on the above result, it is shown that the IZS of T(s) and any other rational matrix within the dynamic equivalance class (T(s))S is fully described by a complete abstract invariant of (T(s))S which is known as the interactor: (Xi sub T)(s) of T(s). The above results allow one to interpret the degrees of the infinite zeros of T(s) with p = or < m as observability indices of an irreducible rational matrix T(s) epsilon (T(s))S. GRA

AUTOMATIC ELEMENT REORDERING FOR FINITE ELEMENT ANALYSIS WITH FRONTAL SOLUTION SCHEMES

S. W. Sloan and M. F. Randolph 1981 53 p refs
(PB82-115114; CUED/D-SOILS/TR-109-1981;
ISSN-0309-7439) Avail: NTIS HC A04/MF A01 CSCL 12A

A scheme for obtaining an efficient ordering of elements when using the frontal solution method in finite element computations is described. As an introduction, some basic operation counts for a frontal implementation of Gaussian elimination are derived, and a review of alternative approaches to the problem of deriving efficient numberings is given. Attention is confined to finite element meshes where the number of degrees of freedom for each node is approximately constant. It is shown that efficient element orderings may be obtained by first relabelling the nodes, and then relabelling the elements so that the new nodal elimination order is approximately preserved. The algorithm which is based on a minimum front-growth principle, is shown to be suitable for relabelling the nodes. An algorithm for renumbering the elements automatically in a frontal solution procedure is described in detail, and an illustrative FORTRAN 4 implementation, is given. GRA

THE ANALYSIS OF REPEATED MEASUREMENTS THROUGH TIME Ph.D. Thesis

Philip John Byrne 1981 125 p
Avail: Univ. Microfilms Order No. 8129145

In statistical analyses repeated measures through time on the same experimental unit occur. The assumed structure of a covariance matrix plays an important role in the selection an appropriate test procedure. The first order antedependence model is a model of time dependency which generalizes the first order autoregressive model by relaxing both the assumption of equal variances, and the assumption of equal correlations between all pairs of variables equidistant in time. Several tests regarding the covariance structure are given. Results are subsequently extended to the situation in which a vector of measurements is taken on each experimental unit at each time period.

MULTI-SAMPLE CLUSTER ANALYSIS AND APPROACHES TO VALIDITY STUDIES IN CLUSTERING INDIVIDUALS Ph.D. Thesis

Hamparsum Bozdogan 1981 147 p
Avail: Univ. Microfilms Order No. 8129898

Multi-sample cluster analysis and clustering individuals are studied from an information-theoretic viewpoint via Akaike's Information Criterion (AIC): where L is the maximized likelihood and m is the number of parameters. This criterion combines the maximum value of the likelihood with the number of parameters used in achieving that value. The multi-sample cluster problem is defined, and (AIC) is developed and proposed as a new procedure for the comparison and identification of various collections of groups, profiles, samples, treatments, experimental conditions, or diagnostic classifications. Univariate and multivariate numerical examples of multi-sample cluster analysis on real data sets are presented and the results are compared with those of conventional multiple comparison procedures. The major computer programs for the Normal Mixture Algorithm (NORMIX) are given for convenience. Dissert. Abstr.

PARTIAL SEQUENTIAL TESTS FOR THE MEAN OF A NORMAL DISTRIBUTION Ph.D. Thesis

Nasser Reza Arghami 1981 131 p
Avail: Univ. Microfilms Order No. 8125865

Partial sequential procedures for testing a null hypothesis about a normal mean are discussed. A procedure is introduced which reduces the expected sample size for all mean values with considerable reductions for values near the null mean value. Theoretical operating characteristic and average sample number functions are derived, and the empirical distribution of the sample size in some special cases is obtained. Tests for the case of unknown variance and a one sided alternative hypothesis are discussed. A partial sequential test procedure is introduced for hypotheses concerned only with the arithmetic mean. An advantage of this procedure is the fact that the transformed observations follow a central t-distribution as distinct from the noncentral t-distribution. The key element in the procedure is that a number of observations is taken initially before any decision is made; subsequent observations are then taken in batches, the sizes of which depend on the estimate for the variance obtained from the initial set of observations. The ideas developed for the partial sequential t-test are extended to develop tests of hypotheses concerning the parameters of a simple linear regression equation, general linear hypotheses and hypotheses about the mean of special cases of the multivariate normal.

ON SEQUENTIAL UNBIASED AND BAYES TYPE ESTIMATES OF PARAMETERS IN A CONTINGENCY TABLE Ph.D. Thesis

Cheng-Chung Chen 1981 107 p
Avail: Univ. Microfilms Order No. 8125818

Estimation of the probability parameters in a contingency table with linear and/or log linear constrants on the parameters is discussed. Sequential unbiased estimates of the cell probabilities as well as some Bayes posterior mean type estimates are considered. The problem of sequential unbiased estimation of the parameters in a contingency table with linear and/or log linear contraints is addressed. Multinomial Girschick, Mosteller, and Savage type stopping rules are discussed and the corresponding unbiased estimates based on the minimal sufficient statistic described. The problem of sequential unbiased estimation of the probability parameters in the Bradley Terry model of paired comparisons is studied. Two Bayes type procedures for estimating the multinomial cell probability vector p, in the presence of linear constraints on the parameters are proposed and illustrated with examples. A Bayesian approach to the estimation of parameters in the Bradley-Terry model of paired comparisons is considered.

ON SIMPLE ROBUST CONFIDENCE PROCEDURES Ph.D. Thesis

Paul Samuel Horn 1981 500 p
Avail: Univ. Microfilms Order No. 8127748

The use of 't' statistics based on two or four order statistics is explored. The functions of the order statistics used to define the 't' statistics are the hinges. Two 't' statistics based on the hinges are examined. The simpler, pivot-t, is based on two symmetric order statics. The other, bi-pivot-t, uses the hinges when they each involve two order statistics. For each of the 't' statistics appropriate percentage points are computed using Monte Carlo methods. Conservative confidence intervals are constructed. Criteria are defined and used to assess the performance of the confidence procedures based on the 't' statistics. Poly-efficiencies for the 't' statistics are also given. Pooling (borrowing) of denominators is also examined. New methods of pooling extra information about spread, in addition to the traditional root-mean-square, and their effect on the performances of the 't' statistics is also discussed. M.D.K.

ON ASYMPTOTIC OPTIMALITY OF BAYES EMPIRICAL BAYES ESTIMATORS Ph.D. Thesis
Tze Fen Li 1981 34 p
Avail: Univ. Microfilms Order No. 8126522

In an empirical Bayes decision problem, a prior distribution Lambda is placed on a one-dimensional family G of priors G sub omega, omega an element of Omega, to produce a Bayes empirical Bayes estimator. The asymptotic optimality of the Bayes estimator is established when the support of Lambda is Omega and the marginal distribution H sub omega have monotone likelihood ratio and continuous Kullback-Leibler information number. For the normal case, a simple class of empirical Bayes estimators is constructed that dominate the James-Stein estimator. Here the Bayes estimator is smooth, admissible and asymptotically optimal on G. The rate of convergence to minimum risk is O/n uniformly on G. The results of a Monte Carlo study are presented to demonstrate the favorable risk behavior of the Bayes estimator in comparison with other competitors including the James-Stein estimator. Dissert. Abstr.

DATA MODIFICATIONS BASED ON ORDER: PUSHBACK; A CONFIGURAL POLYSAMPLING APPROACH Ph.D. Thesis
Katherine Bell Krystinik 1981 131 p
Avail: Univ. Microfilms Order No. 8126073

Pushback estimates are obtained by a preliminery data modification followed by the application of a simple robust estimate. Monte Carlo results are given for different pushback forms. Some forms are shown to have performance close to 90% of that of good biweights for sample size twenty. For a finite sample size the configural sampling and polysampling approach is presented as a way to achieve: (1) an honest minimum attainable variance for a particular sampling situation; (2) an honest maximum attainable polyefficiency in a particular polysituation; and (3) guidance in the modification of a robust estimate with the aim of increasing its polyefficiency. Estimates are calculated based on the configuration and thus this approach should require fewer samples than traditional Monte Carlo methods. The technique also allows for data from one situation to be used as if it were from each of several situations. Dissert. Abstr.

Chase (Biometrika (1974)) found a good approximation for the chi-bar-square and E-bar-square distributions for an important special case. These distributions are fundamental to the theory of order restricted tests. Chase had in mind the problem of comparing ordered dose levels with a control and considered the case where there are more observations on the control. He obtained a recursive relation for the limiting values of the coefficients in those distributions as the sample size on the control becomes infinite and the other sample sizes remain fixed and equal. His approximation is the result of an interpolation between critical values in this limiting case and critical values in the case where all the sample sizes are equal. Starting with Chase's formula we derive a sharper recursion relation and table the limiting coefficients. This allows one to determine approximate P-values; to use critical values not included in Chase's tables and to apply these approximations to testing problems where other versions of the chi-bar-square and e-bar-square distributions occur. The generalized cubic splining algorithm enables us to evaluate recursively-defined convolutions for a wide variety of distribution functions. The algorithm has been applied to evaluate the renewal function, variance function and the integral of the renewal function for five distributions (gamma, inverse Gaussian, lognormal, truncated normal and Weibull) for a wide range of values of the shape parameter. The results of the computations are discussed and a comparison is made with previous tabulations. Author (GRA)

THE COMPUTATION OF LAPLACIAN SMOOTHING SPLINES WITH EXAMPLES
James G. Wendelberger Sep. 1981 68 p
(Contract N00014-77-C-0675; Grant NAG5-128)
(AD-A108746; TR-648) Avail: NTIS HC A05/MF A01 CSCL 12/1

Laplacian Smoothing Splines (LSS) are presented as generalizations of graduation, cubic and thin plate splines. The method of generalized cross validation (GCV) to choose the smoothing parameter is described. GCV is used in the algorithm for the computation of LSS'S. An outline of a computer program which implements this algorithm is presented along with a description of the use of the program. Examples in one, two and three dimensions demonstrate how to obtain estimates of function values with confidence intervals and estimates of first and second derivatives. Probability plots are used as a diagnostic tool to check for model inadequacy. Author (GRA)

In certain problems, it may be expected that a regression function has a substantial overall tendency to be monotone and yet we may not be certain that all of the restrictions imposed by a simple order are satisfied. Distribution theory for liklihood ratio tests of homogeneity of a collection of normal means when the collection is 'decreasing on the average' and for testing 'decreasing on the average' as a null hypothesis, is presented. The restriction 'decreasing on the average' is less restrictive than the usual monotone restriction and allows the data to give rise to 'reversals' over short ranges of values of the parameter set. It is closely related to the 'starshaped ordering' restriction. GRA

ONE-SIDED COMPARISONS FOR TREATMENTS WITH A CONTROL
Tim Robertson and F. T. Wright 10 Sep. 1981 23 p refs
Prepared in cooperation with Missouri Univ., Rolla
(Contracts N00014-80-C-0321; N00014-80-C-0322)
(AD-A108331; TR-78) Avail: NTIS HC A02/MF A01 CSCL 12/1

Distribution theory for likelihood ratio statistics for the comparison of several treatments with a control is discussed. These test statistics account for prior information that the treatments are at least as effective as the control. It is assumed that the sample sizes on the treatments are (approximately) equal and the sample size on the control is at least as large. Normal means are compared under the assumption of a common variance, either known or unknown. The analogous problem for proportions is also considered. Author (GRA)

SMOOTHING SPLINES: REGRESSION, DERIVATIVES AND DECONVOLUTION
John Rice and Murray Rosenblatt Nov. 1981 41 p refs
(Contract N00014-81-K-0003; Grant NSF MCS-79-01800)
(AD-A108631) Avail: NTIS HC A03/MF A01 CSCL 12/1

The statistical properties of a cubic smoothing spline and its derivative are analyzed. It is shown that unless unnatural boundary conditions hold, the integrated squared bias is dominated by local effects near the boundary. Similar effects are shown to occur in the regularized solution of a translation-kernel integral equation. These results are derived by developing a Fourier representation for a smoothing spline. APPLICATION OF THE ALPHA-BETA PROCEDURE TO DIFFERENTIAL GAMES [UMA APLICACAO DO PROCEDIMENTO ALFA-BETA A JOGOS DIFERENCIAIS]
Julia Leocadia deOliveira, Paulo O. Simoni, and Celso deRennaeSouza Jun. 1981 43 p refs In PORTUGUESE; ENGLISH abstract Presented at the 33rd Ann. Meeting of the SBPC, Salvador, Brazil, 8-15 Jul. 1981
(INPE-2135-RPE/358) Avail: NTIS HC A03/MF A01

Differential games are rewritten as discrete time models, in which the control variables are also discrete and chosen in alternate moves by the two players, using the alpha-beta procedure, generally used in the computer implementation of board games. A relative value V (x sub 1, omega) for the locally optimum game was defined and it was shown that: after I decisions, the difference between states of any two games, started in the same point x, is limited; the difference between the global value of the game and V (x sub 1, omega), is limited. Three differential pursuit games are presented. The results obtained are examined from the point of view of the influence on them of the evaluation functions, and of the search depth. The solutions obtained with the discrete alpha-beta procedure were very close to the analytical solutions, in the two cases where these solutions were known. M.G.

SUGGESTED MODELS FOR ANALYZING AND FORECASTING DEMAND FOR COMPONENTS OF ARMY VEHICLES
D. J. D. Wijnmalen Sep. 1979 37 p refs In DUTCH; ENGLISH summary
(Contract A78/KL/104)
(PHL-1979-35; TDCK-72841) Avail: NTIS HC A03/MF A01

A computer program concerned with a time series analysis of the demand for vehicle components is described. A number of models are considered which represent common time series patterns, such as trend and seasonal variation. From these models the best fitting model is selected. By extrapolating the fitted model forecasts are made for the demand for vehicle components in one or more future years. The appendices describe the output information of the program and present some results. J.M.S.

SENSITIVITY THEORY FOR NONLINEAR SYSTEMS. 1: NONLINEAR FUNCTIONAL ANALYSIS APPROACH
Dan G. Cacuci Aug. 1981 30 p refs Sponsored by EPRI
(Contract W-7405-eng-26)
(ORNL/TM-7304; EPRI-RP-1441-1; EPRI-NP-81-19-LD) Avail: NTIS HC AC3/MF A01

Concepts of nonlinear functional analysis are employed to investigate the mathematical foundations underlying sensitivity theory. Two alternative formalisms, labeled the forward sensitivity formalism and the adjoint sensitivity formalism, are developed in order to evaluate the sensitivity of the response to variations in the system parameters. The forward sensitivity formalism is formulated in normed linear spaces, and the existence of the Gateaux differentials of the operators appearing in the problem is shown to be both necessary and sufficient for its validity. Although conceptually straightforward and applicable to a considerably wider range of problems, this formalism is computationally expensive to employ. The alternative adjoint sensitivity formalism is considerably more economical from a computational standpoint, but it can only be formulated under more restrictive conditions. In particular, the requirement that operators acting on the state vector and on the system parameters must admit densely defined Gateaux derivatives is shown to be of fundamental importance for the validity of this formalism. The Swedish ATVAM was compared with the more complex American one in order to inprove Swedish detailed techniques and assumptions, thereby obviating extensive tests. The economic advantages of the simpler methodology are considered. Computer models of both countries were applied to a bomber. The largest differences between the models are structural kill (not treated in the Swedish model), fragment penetration capability calculation, and the definition and use of damage criteria. The time needed to describe a target is similar. When the Swedish target description is complete it is also ready to be used against any warhead in the computer program which calculates the kill probabilities. The American model requires three computer runs. The models are so integrated that extensive incorporation of features from the other causes unacceptable increases in complexity. Author (ESA)

A FURTHER INQUIRY INTO THE THEORY OF S-TRANSFOR-

MATIONS AND CRITERION MATRICES Ph.D. Thesis
Martien Molenaar 14 Apr 1981 85 p refs
Avail: NTIS HC A05/MF A01

A study was initiated into which way the 'Delft techniques' can be applied to photogrammetry. Emphasis was put on methods for error detection in aerotriangulation blocks. Gross data errors prevents the convergence of the solution for block adjustments. Because the mathematical relationships for independent model blocks are relatively simple, study was done for this method of adjustment. A preadjustment error detection method is based on a test of the misclosures of condition equations for observations. The transformation elements for these connections are found as a result of the adjustment. An alternative is the connection of models before adjustment by means of S transformations. Therefore, basepoints are chosen in the overlap of two models to be connected. When both models are transformed to that base, condition equations are formulated for other points in the overlap. This approach is complicated and can be avoided for planimetric independent model blocks. For this case, use of complex number algebra makes a simple elimination of transformation elements possible. WAVE FUNCTION FORMALISMS IN THE CHANNEL COUPLING ARRAY THEORY OF MANY-BODY SCATTERING
F. S. Levin (Brown Univ.) Aug. 1980 35 p refs Sponsored in part by DOE
(BONN-HE-80-15) Avail: NTIS (US Sales Only) HC A03/MF A01; DOE Depository Libraries

Wave function formalisms correponding to different channel coupling array transition operators of many-body scattering theory are derived and discussed. The Kouri-Levin transition operators are seen to be in typical Lippmann-Schwinger (L-S) form and allow for the introduction of wave function components in a particularly straightforward way. The Baer-Kouri transition operators are not in L-S form and an alternate procedure is used to derive their corresponding wave function components. In the three-body case, the Kour-Levin operators T sub (jK) obtained from the Faddeev-Lovelace choice of channel coupling array are seen to lead to precisely the Faddeev wave function components. The Baer-Kouri operators are shown to lead to wave function components obeying inhomogeneous equations. These inhomogeneous equations are used to give an alternate explanation of the non-unitary amplitudes obtained in recent calculations based on approximate forms of the Baer-Kouri operators. DOE

A MULTI-CLUSTER, N-PARTICLE GENERALIZATION OF THE THREE-PARTICLE FADDEEV WAVE FUNCTION EQUATIONS
F. S. Levin (Brown Univ.) Aug. 1980 43 p refs
(BONN-HE-80-16; ISSN-0172-8733) Avail: NTIS (US Sales Only)HC A03/MF A01; DOE Depository Libraries

It is noted that recent work applying certain forms of many-body scattering theory to problems such as molecular potential energy surfaces and equations for non-equilibrium statistical mechanics indicates that a formulation of the theory based directly on multi-cluster, n-particle, wave function components could be of some utility. Such a formulation is derived using techniques from the Baer-Kouri-Levin-Tobocman and Bencze-Redish-Sloan-Polyzou theories of multi-particle scattering. It is based on components corresponding to the various multi-cluster partitions of an n-particle scattering system and is a generalization of the three-body Faddeev wave function formalism, to which it reduces when n = 3. Except for the full breakup partition, which does not enter the equations, the new components are defined for all possible m-cluster partitions of the n-particles, 2 < or = m < = n - 1. The sum of all the components yields the solution to the Schroedinger equation for scattering and either the Schroedinger equation solution or an easily identified spurious solution in the case of bound states. Both the two-cluster components and two-cluster transition operators are shown to be solutions of equations involving quantities carrying only two-cluster partition labels. DOE

STANDARD TEST CASE RUNS FOR THE EMPULSE MONOPOLE FIELDSOLVER AND CONDUCTIVITY GENERATION MODEL
Frank W. Chambers and David M. Cox 2 Mar. 1981 80 p refs
(Contracts W-7405-eng-48; N60921-80-WR-W0188; ARPA Order 3178)
(AD-A108739; UCID-19213) Avail: NTIS HC A04/MF A01 CSCL 20/1

At the high current beam propagation workshop it was realized that fieldsolver comparisons between working groups should be made for beams with expanded heads such as develop by blowoff and erosion during propagation. To facilitate comparisons of the fieldsolvers while removing the differences due to evolution of the beam during propagation, standard test cases with imposed beam head profiles were suggested. Hence, unambiguous field and conductivity generation calculation comparisons can be made. The field equations solved for this report are derived elsewhere. The plasma generation model includes a direct deposition term, an avalanche ionization term based on experimental data, and a recombination term. Plasma density is related to a scalar conductivity through the momentum transfer collision frequency. The actual coded fieldsolver used for the results in this report was extracted from the EMPULSE II code. The PHOENIX code was constructed to run this fieldsolver and generate the appropriate diagnostic output. Standard test cases are proposed where the beam current density is prescribed at all points in space. This is accomplished using a simple parameterized profile which can represent a cylindrical beam or one with an eroded nose. Four test cases are proposed; PHOENIX results for these cases are presented. GRA

STEADY STATE NUMERICAL SOLUTION OF MAGNETICALLY INSULATED CHARGE FLOW IN COAXIAL GEOMETRY Interim Report
R. J. Barker and P. F. Ottinger (JAYCOR, Inc., Alexandria, Va.) 8 Dec. 1981 66 p refs Sponsored in cooperation with Defense Nuclear Agency
(Contract ES-77-A-01-6021)
(AD-A108633; NRL-MR-4654) Avail: NTIS HC A04/MF A01 CSCL 20/3

A vectorized, FORTRAN computer program has been written to calculate steady-state electron and ion fluxes as well as radial profiles of the magnetic and electric fields for specific practical radial diode and magnetically insulated vacuum feed line parameters. The numerical formulation is derived in part from the theoretical treatment of the topic by K.D. Bergeron. However, it differs from the treatment in several important respects.

including: a correction in one of the key scaling expressions, a restructuring of the boundary conditions to allow for specific parametric solutions, and a more careful consideration of the regions near the anode and cathode surfaces and near the electron sheath boundary. In deriving these results, analytic approximations for the fields in these 'special' regions were developed. These approximate solutions permitted numerical treatment of the singularities there. Matching the approximations between the regions also provided first-order guesses for the gross steady-state operating characteristics. Author (GRA)

THE VELOCITY FIELD NEAR THE ORIFICE OF A HELMHOLTZ RESONATOR IN GRAZING FLOW
Andrew F. Charwat and Bruce E. Walker Mar. 1981 53 p refs
(Grant NsG-3236)
(NASA-CR-168548; UCLA-ENG-81-101) Avail: NTIS HC A04/MF A01 CSCL 20A

Measurement of the time-dependent velocities induced inside and outside the opening of acoustically excited, two-dimensional Helmholtz resonator imbedded in a grazing flow are presented. The remarkably clear structure of the perturbation field which evokes a pulsating source and a coherently pulsating vortex-image pair is described. The simple phenomenological 'lid-model' which correlates the variation in the components of the acoustic impedance with the velocity of the grazing flow is discussed and extended. Author

STUDY OF CABIN NOISE CONTROL FOR TWIN ENGINE GENERAL AVIATION AIRCRAFT
R. Vaicaitis and M. Slazak Hampton, Va. NASA. Langley Research Center Feb. 1982 147 p refs
(Contract NAS1-16117)
(NASA-CR-165833; MAI-1) Avail: NTIS HC A07/MF A01 CSCL 20A

An analytical model based on modal analysis was developed to predict the noise transmission into a twin-engine light aircraft. The model was applied to optimize the interior noise to an A-weighted level of 85 dBA. To achieve the required noise attenuation, add-on treatments in the form of honeycomb panels, damping tapes, acoustic blankets, septum barriers and limp trim panels were added to the existing structure. The added weight of the noise control treatment is about 1.1 percent of the total gross take-off weight of the aircraft. B.W.

ANNOYANCE CAUSED BY PROPELLER AIRPLANE FLYOVER NOISE: PRELIMINARY RESULTS
David A. McCurdy and Clemans A. Powell Dec. 1981 35 p refs
(NASA-TM-83244) Avail: NTIS HC A03/MF A01 CSCL 20A

The annoyance response of people to the noise of propeller airplane flyovers was examined. The specific items of interest were: (1) the annoyance prediction ability of current noise metrics; (2) the effect of tone corrections on prediction ability; (3) the effect of duration corrections on prediction ability; and (4) the effect of 'critical band' corrections on the prediction ability of perceived noise level. Preliminary analyses of the data obtained from two experiments are presented. The first experiment examined 11 propeller airplanes with maximum takeoff weights greater than or equal to 5700 kg. The second experiment examined 14 propeller airplanes weighting 5700 kg or less. Also included in each experiment were five different commercial service jet airplanes. Each airplane noise was presented at D-weighted sound pressure levels of 70, 80, and 90 dB to subjects in a testing room which simulates the outdoor acoustic environment. Subjects judged 108 stimuli in the first experiment and 132 stimuli in the second experiment. Perceived noise level predicted annoyance better than A, D, or E-weighted sound pressure level. Corrections for tones greater than of equal to 500 Hz generally improved prediction ability for the heavier propeller airplanes. B.W.

DIFFERENTIAL SOUND ABSORPTION TECHNIQUE AND EFFECT OF ION-PAIRING AND PRESSURE ON SOUND ABSORPTION IN SEA WATER AND AQUEOUS MIXTURES OF MAGNESIUM SULFATE AND SODIUM CHLORIDE Summary Report
Cheng-chih Hsu 1 Nov. 1981 135 p refs
(Contracts N00014-79-C-0472; N00014-80-C-0674; Grant NSF OCE-78-25123)
(AD-A108569; MPL-U-71/81; SIO-REF-81-34) Avail: NTIS HC A07/MF A01 CSCL 20/1

Sound absorption in the ocean between 5 kHz and 350 kHz is principally due to the relaxation process associated with a pressure dependent chemical reaction of MgSO4. This research has resolved two conflicts regarding the effect of pressure on sound absorption and relaxation frequency due to MgSO4 in sea water and the reduction of sound absorption by the addition of up to 0.6 M NaCl to low concentration (0.02M) solution of NaCl. The reduction of absorption in MgSO4 solution upon the addition of NaCl can be accounted for theoretically by Debye-Huckel theory and by formation of MgCl(+) and NaSO4 ion-pairs. The measured reduction is less than that observed by Kurtze and Tamm, however. At this concentration of MgSO4, the effects of ionic strength and ion-pairing are about equal. The results are consistent with disassociation constants of 0.0082, 0.1, 0.178 for the MgSO4, NaSO4(-) and MgCl(+) ion-pairs, respectively up to 0.12 M NaCl addition. For 0.6M NaCl additions to 0.02 M MgSO4, the absorption results cannot be explained by either simple Debye-Huckel theory, the Johnson and Pytkowicz model of ion-pairing nor the Pitzer approach. The values of maximum absorption per wavelength were determined to an absolute accuracy of about 1% from .000080 tn .000016. For the differential absorption measurements in MgSO4 and NaCl mixtures, the measurement accuracy is sufficient for quantitative studies of ion-pairing in electrolyte mixtures, particularly for unsymmetrical salts. MODIFIED AMBIENT SEA NOISE INDICATOR WITH AMBIENT NOISE DIRECTIONALITY ESTIMATOR Final Technical Report, 1 Jan. - 31 Aug. 1981
William Ezell 30 Oct. 1981 32 p
(Contract N62269-81-C-0306)
(AD-A108389; SPARTON-7723-A003(F)) Avail: NTIS HC A03/MF A01 CSCL 17/1

The modified Ambient Sea Noise Indicator (ASNI) ID-1872/A MOD which includes an Ambient Noise Directionally Estimator (ANODE) function, provides a comparison of the omnidirectional noise level and the summed noise levels of the two directional channels of a VLAD AN/SSQ-77 sonobuoy when in the ANODE mode. The omnidirectional ASNI absolute noise level can also be read for specific frequancies at the hydrophones of passive omnidirectional sonobuoys without automatic gain control when the modified unit is in the ASNI mode. Passive sonobuoys, located in the sea, will pick up sea noise with pressure-sensitive hydrophones. If the sonobuoy is an AN/SSQ-57, one omnidirectional hydrophone is used. If an AN/SSQ-77 sonobuoy is used, a vertical multielement array of hydrophones provides directional as well as omnidirectional information. The sea noise is transmitted to a receiver in the aircraft. The demodulated signal from the receiver is applied to the indicator. The ASNI and ANODE mode levels are indicated on the front panel meter, which is calibrated in decibels in a 1-Hz band relative to 1 microPascal sq for the omnidirectional noise level and in decibels for the directional channel to omnidirectional channel noise difference. The ambient sea noise levels may be used to plot a graph of ambient sea noise. The ANODE gain may be used to evaluate the effectiveness of the VLAD sonobuoy under various sea states. GRA

FRAM 2 SINGLE CHANNEL AMBIENT NOISE STATISTICS
Roger F. Dwyer 25 Nov. 1981 34 p Presented at the 101st Meeting of the Acoust. Soc. of Am., Ottawa (Canada), 19 May 1981
(ZR0000101)
(AD-A108755; NUSC/TD-6583) Avail: NTIS HC A03/MF A01 CSCL 20/1

This document describes the results of a statistical analysis study of FRAM II arctic under-ice ambient noise data. The specific data that were analyzed were recorded on 23-24 April 1980 from a pack ice camp in the Arctic Ocean, located at 86 deg N latitude, 25 deg W longitude. At this location, the bottom depth was approximately 4000 m. The measurement system consisted of a broadband omnidirectional hydrophone, suspended to a depth of 91 m from a sonobuoy located in a lead. Under the influence of arctic currents, the pack ice was slowly moving. This movement caused rifting and cracking of ice, which occurred, at times, throughout the experiments and represented a structured acoustic noise source. Both impulsive and burst noise were identified in the data and were probably created by tensile cracks and rubbing ice masses. GRA

EFFECT OF AIR CONTENT ON BROADBAND NOISE MEASUREMENTS IN THE 1.22-m DIAMETER WATER TUNNEL
B. E. Robbins and D. E. Thompson 11 Aug. 1981 18 p
(Contract N00024-79-C-6043)
(AD-A108540; ARL/PSU/TM-81-166) Avail: NTIS HC A02/MF A01 CSCL 20/1

The effect of air content on broadband radiated noise in the 1.22-m diameter water tunnel was investigated. In addition, tunnel operating pressure was also varied. The transmitting hydrophone was positioned in the tail of an axisymmetric body mounted in the test section. Two receiving transducers were used. Both showed a somewhat systematic change in broadband spectral levels with variations in air content up to 11 parts per million and variations in pressure. Author (GRA)

THEORETICAL AND EXPERIMENTAL INVESTIGATIONS OF THE OUTWARD PROPAGATION OF TIRE NOISE [THEORETISCHE UND EXPERIMENTELLE UNTERSUCHUNGEN ZUR ABSTRAHLUNG VON REIFENLAERM]
O. Bschorr, A. Wolf, and J. Mittmann 30 Apr. 1981 58 p refs In GERMAN
(MBB-BB-483-81-O) Avail: NTIS HC A04/MF A01

Noise propagation caused by tires was measured acoustically. Narrowband analysis shows a linear spectrum which is in complete agreement with the profile grab frequency and harmony. In the zoom spectra unequal profile division caused by sidebands is recognized. The noise propagation caused by body vibration was also measured. The vibration response follows after valve acceleration and deceleration. The real distance and contact free tire surface are free of vibration. The body vibration becomes greater with increased speed, from 30 to 150 m/sec, after which flexural waves stabilize the body. Transl. by E.A.K.

MEASUREMENT OF THE ABSORPTION PROPERTIES OF ACOUSTIC MATERIALS USED IN THE FABRICATION OF COWLINGS Final Report [MESURE DES PROPRIETES D'ABSORPTION DE MATERIAUX ACOUSTIQUES UTILISES POUR LA REALISATION DE CAPOTAGES]
B. Corlay and G. Delalot Jul. 1981 164 p refs In FRENCH
(CETIM-11-H-285) Avail: NTIS HC A08/MF A01

A wide selection of sound absorbing materials was tested, using the stationary wave tube method, and absorption factors were determined. Results are used to compile a catalog of industrial acoustically absorbant materials which can be employed as interior linings on cowlings for mobile or fixed noisy equipment. Theory that explains the absorptivity of these materials when used alone or in combinations is also presented. Results for low and middle frequency absorption are stressed. Author (ESA)

ON THE COMPOSITE STRUCTURE OF ELEMENTARY PARTICLES Ph.D. Thesis
Xerxes Ramyar Tata 1981 192 p
Avail: Univ. Microfilms Order No. 8128697

It is shown that the recombination model associated with modified Kuti-Wiesskopf structure functions provides, within the framework of the quark-parton model, a consistent description of low p sub T particle production in the fragmentation domain of colliding hadrons. The parameters needed to specify the structure functions of the hadrons are all determined from the inclusive single meson production data. The compositeness of particles is then studied from the more fundamental field theoretic point of view. The sense in which a Yakama type interaction may be regarded as equivalent to a four point interaction, with the intermediate boson of the Yakawa theory being regarded as a composite particle, is examined. Irrespective of the bosonic or fermionic nature of the constituents of the four point interaction, the compositeness conditions do not by themselves, ensure the identity of the two theories. It is further shown that the Yukawa interaction may be made to undergo a transmutation into a four point interaction provided certain spectral contributions that occur in the Yukawa theory are explicity omitted. In view of this, it is suggested that all proofs of the equilvalence of the four fermion theory with the corresponding Yukawa theory need to be reexamined. Dissert. Abstr.

ALIGNMENT SIGNALS FROM ELECTRONS SCATTERING NEAR AN EDJE FOR ELECTRON BEAM MICROFABRICATION Ph.D. Thesis
Yi-Ching Lin 1981 197 p
Avail: Univ. Microfilms Order No. 8200187

The formation of alignment signals from electrons scattering near topographical silicon features both with and without an electron sensitive polymethyl methacrylate resist layer coating was studied theoretically and experimentally. Monte Carlo calculations based on the continuous slowing down approximation were used to generate basic information about electron backscattering from tapered silicon steps. The accuracy of the Monte Carlo approach for the study of electron backscattering was checked in a detailed comparison with available experimental and theoretical results. The effects of beam parameters, mark geometry, resist coating, and the distribution of backscattered electrons in energy and angle on the quality of alignment signals were studied in detail. In many cases, the alignment signals were characterized through the use of universal curves based on simple analytical scattering models. Dissert. Abstr.

TWO-DIMENSIONAL NUCLEAR MAGNETIC RESONANCE IN LIQUIDS Ph.D. Thesis
Adriaan Bax 26 Nov. 1981 211 p refs
Avail: NTIS HC A10/MF A01

The general aspects of two dimensional NMR spectroscopy are treated using a quantum mechanical description and a pictorial example of a two dimensional experiment. The different types of modulation and the consequences for the resultant line shapes are discussed as well as the effect of digital filtering. Chemical shift spectroscopy. J-spectroscopy, and multiple quantum spectroscopy are considered. A number of experiments all having in common the fact that the only signals observed are those from C-13 nuclei coupled to another C-13 nucleus is described. The much stronger signals from isolated C-13 are suppressed using the properties of multiple quantum coherence. The effectiveness of various two dimensional methods for determining particular MNR parameters is evaluated. Computer and spectrometer facilities for performing two dimensional experiments are assessed. A.R.H.

ELECTRONIC TRANSPORT IN ULTRATHIN HETEROSTRUCTURES Final Report, 1 Aug. 1978 - 31 Jul. 1981
P. D. Dapkus Oct. 1981 108 p refs
(Contract N00014-78-C-0711)
(AD-A108390; MRDC40129) Avail: NTIS HC A06/MF A01 CSCL 20/7

A detailed study of the optical and electronic transport studies of ultrathin GaAlAs/GaAs heterostructures is reported. The measurements are reported on GaAlAs multiple quantum well heterostructures (MQW) and superlattices (SL) with layer dimension ranging from 200 to 30 A grown by metalorganic chemical vapor deposition (MOCVD). The measurements show that laser emission from these structures lie 36 meV below the absorption edge, consistent with LO phonon emission. The transport properties of modulation doped superlattices and single heterostructures demonstrate enhanced room temperature and low temperature mobility. Author (GRA)

SIMPLE ANALYSIS OF LIGHT ION BEAM LOSSES IN DEUTERIUM PLASMAS CHANNELS
D. G. Colombant and S. A. Goldstein (Jaycor, Inc.) 16 Nov. 1981 29 p refs
(AD-A108287; NRL-MR-4640) Avail: NTIS HC A03/MF A01 CSCL 20/7

Simple analysis of both ion beam energy losses and beam current density reduction is presented for deuterium plasma channels. It is found that whereas an optimum density may exist for reducing the beam energy losses in the channel, no optimum density can be found to minimize the beam current density reduction. Plasma channel radius effects are then examined. It is found that the total ion beam energy loss is not strongly dependent on the initial channel radius. We conclude that final focusing elements in conjunction with channels initially at rest allow for multiterawatt beams to be transported efficiently to 1 sq cm targets while the channel cross-section can be larger. DYNAMICS OF AN INTENSE ELECTRON RING IN A MODIFIED BETATRON FIELD Interim Report
P. Sprangle, C. A. Kapetanakos, and S. J. Marsh (Sachs/Freeman Associates, Bowie, Md.) 23 Nov. 1981 28 p refs
(RR0110941)
(AD-A108359; NRL-MR-4666) Avail: NTIS HC A03/MF A01 CSCL 20/7

The dynamics of an intense electron ring confined in a modified betatron magnetic field is considered. The analysis assumes that the electron ring is located near the center of a conducting torus and includes self fields, induced fields from the walls surrounding the ring and toroidal effects. It has been found that the geometric center of the ring can perform circular motion around the minor axis of the torus. Based on this analysis, a scheme is proposed for the injection of an intense electron beam into a modified betatron accelerator. Author (GRA)

Absolute total cross sections for the collisional decomposition of the negative ion of Uranium Hexafluoride have been measured for laboratory collision energies up to 500 eV. The results have been analyzed with a statistical theory of unimolecular decomposition. By varying the temperature of the carbon surface upon which the negative ions are created, the average initial internal energy in the negative molecular ion can be selected. Experiments performed with 'hot' negative molecular ions indicate larger decomposition cross sections and lower energy thresholds when compared to results for 'cold' negative molecular ions. Molecular dynamics (MD) studies of the nonlinear viscoelastic response of Lennard-Jones model liquid and glassy systems have shown that strain-induced structural changes occur at elevated strain rates and are the microscopic origin of such phenomena as shear (viscosity) thinning and stress overshoot. The structural changes result in a limit to the steady state stress that the material can sustain. In terms of them it was possible to develop a framework for describing ductile failure and the ductile-to-brittle transition. The semi-quantitative agreement of the MD results and primary laboratory studies in organic liquids, polymers and inorganic glasses suggests that the microscopic processes observed in the former are occurring in, and can be used to interpret phenomen in, the latter three. CHARGE TRANSFER CROSS-SECTIONS OF ARGON IONS COLLIDING ON ARGON ATOMS

J. Aubert, S. Bliman, N. Chan-Tung, R. Geller, B. Jacquot, and D. VanHoutte Apr. 1980 13 p refs Presented at the 2nd Conf. on Low Energy Beams, Bath, England, 14-17 Apr. 1980
(CEA-CONF-5209) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

A device was built to measure charge changing cross-sections of argon ions colliding on argon atoms. It consists of an E.C.R. ion source (Micromafiios) that delivers argon ions up to charge +13. The ion source potential may be varied from 1 up to 10 kVolts. A first magnet is used to charge analyze the extracted beam. For a given separated charge state, the ion beam is passed in a collision cell whose pressure may be varied. The ions undergoing collisions on the target are analyzed by a second magnet and collected. The pressure is varied in the collision cell in order to check that the single collision condition is satisfied. It is shown that the ions do two types of collisions: charge exchange and stripping whose cross sections are measured. Interpretation of charge exchange is proposed along yet classic theoretical approaches. As to stripping no available theory allows interpretation. DOE

STUDY OF INCLUSIVE SEMI-LEPTONIC NEUTRAL CURRENT REACTIONS IN NEUTRINO AND ANTINEUTRINO INTERACTIONS BETWEEN 12 AND 200 GeV Ph.D. Thesis - L'Universite de Paris-Sud

Brigitte Devaux Sep. 1980 170 p refs In FRENCH
(CEA-N-2150) Avail: NTIS (US Sales Only) HC A08/MF A01; DOE Depository Libraries

Results obtained in a detailed study of neutral current type reactions: antineutrino + Fe (FEMALE) antineutrino + X using the Neutrino Beam of the SPS at CERN are reported. The detector and beam properties lead to a good knowledge of the resolution and contamination sources. Between 12 and 200 GeV, the ratio of the inclusive cross-sections of neutral to charged current reactions is measured to be Rsub (neutrino) = 0.293 + -0.010 and Rsub (antineutrino) = 0.35 + -0.03. Within the experimental errors, there is no significant variation of ratios with the incoming neutrino energy. The space-time structure of neutral current is dominated by the (V-A) component with a non-zero (V+A) term, up to 4.5 standard deviations. Following Weinberg and Salam model, all results are consistent for a value of sin(2) theta(W) = 0.24 + -0.02. Because of the accuracy, it becomes a reference value for that quantity. DOE

INVESTIGATIONS ABOUT THE INTERNAL CONVERSION COEFFICIENT FOR TRANSITION ENERGIES NEAR THE THRESHOLD Ph.D. Thesis - L'Universite de Paris-Sud

Nelcy FaraniCoursol Jun. 1980 140 p refs In FRENCH
(CEA-R-5052) Avail: NTIS (US Sales Only) HC A06/MF A01; DOE Depository Libraries

A detailed review of the different theories concerning internal conversion is made. The principal physical parameters and their influence on the calculated conversion coefficients are presented. The results (experimental and theoretical) obtained for the internal conversion coefficients near the threshold (K shell) for the transitions in the nuclei (57) Fe (M1; 14 KeV), up(125m)Te (M1; 35KeV), up(129)mXe (M4; 39 KeV) and sup(93m)Nb (M4; 30 KeV) are presented with the ICC computations for different types of transitions on the 30 and 80 atomic number nuclei. A comparison is made of the different computations and a discussion points out the penetration effect and hole correction which become important at low energy and for high multipolarities. DOE

ELASTIC AND INELASTIC SCATTERING MEASUREMENTS FOR THE MG-24 PLUS PB-208 AND SI-28 PLUS PB-208 SYSTEMS

J. S. Eck, T. R. Ophel, P. D. Clark, D. C. Weisser, and G. R. Satchler (ORNL) Oct. 1980 28 p refs Submitted for publication Sponsored in part by DOE and NSF
(ANU-P-788) Avail: NTIS (US Sales Only) HC A03/MF A01; DOE Depository Libraries

The differential cross sections for the elastic and inelastic scattering to the lowest 2(+) states of Mg-24 and Si-28 using Mg-24 and Si-28 beams in conjunction with Pb-20 targets were measured and analyzed. The incident beam energies were 145 MeV for Mg-24 and 162 MeV for Si-28. The measured cross sections were analyzed using coupled channels calculations assuming a rotational model description for the low-lying collective states of Mg-24 and Si-28. The coupled channels calculations are compared with polarization potential calculations in which the experimental B(E2) values are used in both cases. The extracted deformation lengths and deformation parameters are compared to those obtained using similar data with light projectiles, although because of strong Coulomb excitation the present calculations are fairly insensitive to the nuclear deformation parameters. DOE

ELECTRON-SPIN-POLARIZATION EFFECTS IN LOW ENERGY ELECTRON DIFFRACTION, ION NEUTRALIZATION AND METASTABLE ATOM DEEXCITATION AT SOLID SURFACES
G. K. Walters 1981 15 p refs
(Contract DE-AS05-81ER-10817)
(DE82-001179; DOE/ER-10817/1) Avail: NTIS HC A02/MF A01

The development of surface sensitive spectroscopies based on electron spin dependences in electron atom and in surface interactions is discussed. Spin polarization effects in LEED (i.e., PLEED) can be exploited to provide structural information at crystalline surfaces. Nickel (110) has polarization vs. energy profiles that are rich in structure and surprisingly large peak polarizations (approx. 20%). Addition of an ordered tellurium adlayer significantly changes both the PLEED polarization and intensity profiles. Work has begun on construction of a GaAs spin polarized electron source that should provide improved accuracy and data acquisition rates in future PLEED experiments. DOE

RESEARCH ON ATOMIC, MOLECULAR, AND NUCLEAR PHYSICS Progress Report, 1 Dec. 1980 - 30 Nov. 1981
S. M. Shafroth 1981 23 p refs
(Contract DE-AS05-78ER-06027)
(DE82-001175; DOE/ER-06027/13) Avail: NTIS HC A02/MF A01

Experimental progress has involved the study of resonant transfer and excitation (RTE) of electrons from target atoms to highly ionized fast projectiles such as 67 MeV Si(11+), for example, where a resonant transfer is expected to take place. Progress is described on the singles X-ray excitation cross section aspect of this problem. K X-ray production of Si and Ar in collisions with Si (q+) energies ranging from 50 to 88 MeV and charge states 10, 11, 12 was studied. T.M.

WEAK-INTERACTION EXPERIMENTS AT LOW ENERGIES: RESULTS FROM ATOMIC AND NUCLEAR PHYSICS
E. G. Adelberger 1981 21 p refs
(Contract DE-AC06-76ER-07388)
(DE82-001724; DOE/ER-1388/504) Avail: NTIS HC A02/MF A01

Experimental results in the following areas are reviewed: the parity violating eN force, the parity violating NN force, the (MU) sub e mass, and the electric dipole moment of the neutron. The standard model accounts well for most of the data in atomic and nuclear parity violation. The evidence for a finite neutrino mass suggests that modification to the standard model is required while the neutron electric dipole moment provides a constraint on theories of CP nonconservation. T.M.

CHROMOSTATICS OF TWO-QUARK SYSTEMS
K. A. Milton (Oklahoma State Univ.), William F. Palmer, and Stephen S. Pinsky 1981 22 p refs
(Contract DE-AC02-76ER-01545)
(DE82-001181; DOE/ER-01545/314) Avail: NTIS HC A02/MF A01

An estimate for the mean field potential between two heavy quarks (qq) is studied using chromostatics. To do so, the pseudocolor charge algebra is worked out for the qq system in SU(n) of color. Using the leading logarithm, renormalization, group improved Euclidean action for the gluon fields, it is found the mean field potential depends crucially on the algebraic properties of the sources, and that while the quark antiquark (q anti q) system possesses an at least linear potential, the qq system has infinite energy, and hence is decoupled from the physical spectrum. The physical states exhibit color screening. DOE

An experiment on the channeling of high energy particles (protons, pions, and kaons) through a 2 cm thick germanium crystal is described. Experimental results are presented on the multiple scattering of particles passing in a random direction through a crystal and channeling widths for positive and negative heavy particles. Results are also presented on multiple scattering of channeled high energy particles of 35, 100, and 250 GeV energy through the crystal, compared with multiple scattering of particles passing in a random direction through the crystal. LOW TEMPERATURE AND NEUTRON PHYSICS STUDIES Progress Report, Jun. 1980 - Jul. 1981
Jul. 1981 7 p refs
(Contract DE-AS02-76ER-03342)
(DE82-001573; DOE/ER-03342/9; MIT-3342-9) Avail: NTIS HC A02/MF A01

Experimental research work with the neutron diffraction spectrometers on neutron interferometry and on interferometer applications to fundamental neutron physics is reported. Technical improvements in the interferometer system are described. Preliminary experiments in which the phase difference between two coherent beams caused by interferometer angular motion are reported and theoretical work leading to the interpretation of these motion studies is noted. Calibration studies relating intensity effects to phase gradients introduced into the interferometer, performed with a continuously-variable prism assembly, indicate the presence of anomalous phase effects whose origin is being explored. An Aharonov-Bohm experiment with neutrons is reported in which the coupling between a neutron and the magnetic vector potential is considered. Single and double slit diffraction patterns with neutrons are described. DOE

NEAR NEIGHBOR SEPARATIONS OF SURFACE ATOMS Progress Report
1981 18 p refs
(Contract DE-AC02-80ER-10583)
(DE82-002166; DOE/ER-10583/2) Avail: NTIS HC A02/MF A01

The construction phase of the work to develop a technique to measure near neighbor distances of low Z atoms that are adsorbed at solid surfaces is nearly complete. The instrument can measure EXAFS-like secondary yield of high energy electrons. The goal is to then combine the knowledge of these spacings with analysis of electron diffraction data to determine the structure of surfaces. The apparatus that was constructed is described. It became apparent in the course of this work that the instrument would also be well suited for reflection high energy electron diffraction (RHEED), and therefore the applicability of RHEED to studies of surface structure was investigated. Exploratory measurements were made on an existing RHEED system that was available. The conclusion is that RHEED is ideally suited to study the distribution of steps on surfaces. DOE

ANALYTIC OPTICAL POTENTIALS FOR NUCLEON-NUCLEUS NUCLEUS-NUCLEUS COLLISIONS INVOLVING LIGHT AND MEDIUM NUCLEI
Hari B. Bidasaria and Lawrence W. Townsend (Old Dominion Univ.) Jan. 1982 25 p refs
(NASA-TM-83224) Avail: NTIS HC A02/MF A01 CSCL 20H

Utilizing an optical model potential approximation to the exact nucleus-nucleus multiple-scattering series, optical potentials for nucleon-nucleus and nucleus-nucleus collisions are analytically derived. These expressions are applicable to light and medium cosmic ray nuclei as their single-particle density distributions are analytically determined, without approximation, from their actual harmonic well charge density distributions. Pauli correlation effects are included through the use of a simple Gaussian function to replace the usual expression obtained in the infinite nuclear matter approximation. Author

A reference signal of RF frequency modulates a 0.85 micrometer wavelength optical transmitter. The output of which passes through a first optical filter and a voltage-controller phase shifter. The output of the phase shifter is provided to the fiber optic transmission line. At the receiving end of the transmission line, the signal is demodulated and used to modulate a 1.06 micrometer optical transmitter. The signal from the transmitter is provided to the fiber optic transmission line and passes through the voltage-controlled phase shifter to a phase error detector. The phase of the modulation of the 1.06 micrometer wavelength signal is compared to the phase of the reference signal by the phase error detector. A phase control signal related to the phase difference is provided to the voltage controlled phase shifter which alters the phase of both optical signals until a predetermined phase relationship between modulation on the 1.06 micrometer signal and the reference signal is obtained.

HEAT REFLECTING FIELD STOP Patent Application
Wayne A. Massey (TRW Defense and Space Systems Group, Redondo Beach, Calif.) and Dale L. Massey, Inventors (to NASA) (TRW Defense and Space Systems Group, Redondo Beach, Calif.) Filed 30 Oct. 1981 10 p Sponsored by NASA
(NASA-Case-LAR-12443-1; US-Patent-Appl-SN-315582) Avail: NTIS HC A02/MF A01 CSCL 20F

An apertured field stop with a highly reflective surface is described which reflects unwanted rays outside the instrument in order to minimize internal heating. When the reflective field stop is spherically shaped with a radius of curvature equal to the effective focal length of the host optical instrument, rejected rays are reflected back through the light gathering entrance of the instruments. The heat associated with these rejected rays dissipates outside the instrument in the space surrounding entrance orifice. The reflective field stop proves to be a highly effective device for minimizing the internal heat within optical instruments such as space telescopes used to image the Sun and Earth. This invention can be applied to any small field of view optical system that uses a high intensity source radiation as an input. NASA

Microwave analog measurements of scattering by ensembles of 2n(n=1,2,3) interacting spheres are presented. Emphasis is placed on the amplitude and phase measurements of the forward scattered wave as a function of the mutual separation of the spheres and the orientation of the ensembles with respect to the incident beam. A few side scattering and angular distribution measurements indicate the existence of specular scattering at particular array orientations for some of the two-sphere ensembles. A short historical sketch, a description of the experiments, and phenomenological explanations of the results are also given.

Two different interconnect devices for optical fibers have been developed. Each uses the shape memory effect alloy 'NITINOL'. The simpler of the two is of tubular design and accommodates fibers as small as 200 micron diameter. The more complex multi-component design accommodates 125 micron diameter fibers. The complex design is simpler to use, easier to manufacture and lower in cost. It permits less than 1 db loss and is re-matable. A description of NITINOL manufacture is given.

P. Baldetti, F. Bordoni, A. DiGiammarco, and P. Saraceno May 1981 40 p refs In ITALIAN
(IPS-81-8) Avail: NTIS HC A03/MF A01

The modulation system for the secondary mirror of the infrared telescope TIRGO is described. The optimal modulation frequency, the waveforms, absolute and differential modulation, and the mechanical characteristics of the modulator are considered. The mechanics of the actuator, of mounting the mirror, and the optical alignment of the mirror are discussed. The electronics of the system are described, specifically the generator, command electronics, power amplifiers, position sensors, and the protective electronics. The procedure for regulating the position sensors is presented.

THEORETICAL ASPECTS OF THE NONLINEAR INTERACTION OF DRIFT-TYPE INSTABILITIES IN A PLASMA Ph.D. Thesis
Paul Willis Terry 1981 180 p
Avail: Univ. Microfilms Order No. 8128698

Various theoretical aspects of plasma turbulence are explored in the context of low frequency drift-type instabilities in toroidally confined plasmas. Of central importance is consideration of the random phase approximation-its role and validity in plasma turbulence theories. Linear theory is first considered to find the criteria for marginal stability of the toroidal ion temperature gradient drift mode. Analytical criteria for the onset of instability giving the dependence on wavenumber, magnetic curvature, and temperature gradient are derived from the drift kinetic equation with the grad-B and curvature drift resonances retained. Three examples of nonlinear theory relevant to drift wave turbulence are then developed to introduce important nonlinear mechanisms and to illustrate the role of the random phase approximation. The question of the validity of the random phase approximation is then addressed by considering the interaction of three electron drift waves. The equations for the exact interaction are derived their properties are examined, and sample numerical solutions are presented.

ON THE SELF-CONSISTENT SOLUTIONS OF PULSAR PLASMA WAVES
Abraham C.-L. Chian Jan. 1982 17 p refs Submitted for publication
(INPE-2302-PRE/071) Avail: NTIS HC A02/MF A01

In the theoretical study of strong pulsar electromagnetic waves in an electron-ion plasma a dynamic parameter relating electron and ion velocities necessarily appears. It is shown that the dynamic parameter is a function of the plasma stream velocity, the wave velocity, the wave amplitude and the electron-ion mass ratio. In order to obtain self-consistency in the solutions, the dynamic parameter must be chosen appropriately when other parameters are specified.

EQUILIBRIUM STUDIES OF SKIN LIKE PRESSURE AND CURRENT-DENSITY PROFILES

A. W. Kolfschoten Sep. 1981 54 p refs Sponsored by EURATOM and Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek (ZWO)
(Rept-81-134) Avail: NTIS HC A04/MF A01

The MHD equilibria which produce hollow pressure and current profiles that evolve into normal Tokamak parabolic profiles following heating pulses were investigated. A computer code for toroidal ideal MHD equilibria, using a Moebius transformation, which maps the plane of the cross section onto a plane in which the magnetic axis coincides with the origin for the coordinate system was applied. The profiles obtained show good agreement with the experimentally measured ones. Hollow profiles enable the plasma to be in an equilibrium state for which the displacement of the magnetic axis in the direction of the inner side of the torus, i.e., a negative displacement. The average toroidal beta values of these plasmas, subject to the restriction that the safety factor q is > 1 everywhere, can be as high as 10%.

The effect of oxygen and silicon on plasma decay in a screw pinch device is discussed. Plasma current, current displacement, impurity radiation, electron line density, impurity concentrations, and power flux to the wall were measured by optical and magnetic instruments. A snow plow model which incorporates bias field is used to describe the implosion which causes heating. Heating is followed by adiabatic compression. Impurity effect numerical simulation is described. Computer simulation and absolute intensity measurements show oxygen content < 0.1% in standard discharges. With 1% oxygen added, content is > 0.3%. The 0.1% value is a factor of 3 above value from background pressure, indicating that most of the oxygen content is due to plasma-wall interaction, probably during the ringing predischarge. Silicon concentration is < half this value. Author (ESA)

A disk chopper for time of flight analysis of fast neutrons was constructed in order to determine ion energy spectra at lower energies than can be obtained by conventional electromagnetic analyzers. The detection system is described and the measurements are analyzed. The influence of reflections of neutrals at the liner wall was important in calculations of the neutral density profile at the plasma edge. The neutral energy spectrum in the lower energy range was strongly enhanced by this effect. High energy ranges were unaffected by reflection effects. Asymptotic slopes can be used for central ion temperature determination. Author (ESA)

Activities in fusion research are reviewed. Radio frequency heating of inhomogeneous plasmas, in particular by means of Alfven and whistler waves, was studied theoretically and experimentally. Equilibrium studies of a toroidal theta pinch were extended to low density operation and shock wave heating experiments were performed. Several plasma diagnostic instruments, using both coherent and incoherent scattering of laser beams, were developed and tested at fusion test facilities. Detailed measurements on neutron and fast ion production in a plasma focus device are reported. The spatial and temporal distribution of such emissions allows for the identification of the relevant physical processes. Author (ESA)

ELECTRON HOPPING ENERGY INFLUENCE ON THE SPECIFIC HEAT AND CONDUCTIVITY OF PHOSPHORUS DOPED SILICON
M. Fabbri, I. C. daCunha Lima, and A. Ferreira daSilva Jan. 1982 23 p refs Submitted for publication
(INPE-2301-PRE/070) Avail: NTIS HC A02/MF A01

The electronic specific heat and the dc conductivity of the uncompensated Si:P are calculated via a previously developed theory for impurity band in semiconductors. The theory is investigated further in order to take into account the effect of correlation, as well as overlap on the electron hopping energy integral via Heitler-London two-particle wave functions. The calculated specific heat and conductivity show rough agreement when compared to the experimental data over a wide range of donor impurity concentration. The comparison with AMO-MT calculation shows a large enhancement due to a stronger electron correlation. The results of the highly-correlated-electron-gas model and inhomogeneity model are shown for comparison. Author

PLASMON EXCITATION IN ALKALINE EARTH METALS Ph.D. Thesis
Isay Krainsky 1981 160 p refs
Avail: Univ. Microfilms Order No. 8200358

Characteristic energy losses (CEL) of electrons with energies from 1 to 500 eV were studied for alkaline earth metals. All materials studied were deposited just before taking measurements in ultrahigh vacuum. To suppress the background created by true secondary electrons three modes of retarding voltage modulation were utilized. Amplitude halfwidth, and intensity of CEL peaks, corresponding to the surface plasmon (SP) excitation were studied as a function of incident angle and primary energy. It was shown that these results can be partially explained using a two model of a surface CEL peak formation (SP excitation before or after the elastic scattering) or the model of direct electron plasmon scattering. Dissert. Abstr.

A THEORETICAL STUDY OF PHOTO-FIELD EMISSION FROM A METAL SURFACE Ph.D. Thesis
Satinder Singh Sidhu 1981 101 p
Avail: Univ. Microfilms Order No. 8129214

Theoretical models are developed for the current field-emitted from a metal surface into vacuum when the surface is simultaneously irradiated with light of wavelength longer than the threshold wavelength for ordinary photoemission. The total photo-field current from a single emitter face exhibits two components - one increasingly montonically with field and the other having an oscillatory dependence on it. Different aspects of photo-field emission experiments are analyzed to identify the results of interest, and the effect of the incident photon flux on the temperature of the emitter is assessed. Several approaches to the theoretical study of photo-field emission are examined and it is shown that adaptations of the theory of field emission and of the scattering theory treatment of photoemission give equivalent results if photon absorption probability is assumed to be independent of the initial electron state. Dissert. Abstr.

N82-19047 Colorado State Univ., Fort Collins.
COMPARISON OF TWO-PARTICLE CLUSTER EXPANSIONS FOR b.c.c. SPIN OF 1/2 SYSTEMS Ph.D. Thesis
Richard Joseph Krantz 1981 86 p -
Avail: Univ. Microfilms Order No. 8126438

The two particle cluster expansion of the Heisenberg Hamiltonian is reviewed applied to a spin 1/2 lattice. All the standard approximations for ferromagnetism, anti-ferromagnetism of the first kind (AF-11), and anti-ferromagnetism of the second kind (AF-2) are reviewed and shown to have a common basis. A set of approximations which may be applied to systems in which the next near neighbor correlations are the dominant interactions is developed. The free energies and second order zero field transition temperatures for the magnetic phases of interest are derived. This set of approximations is then used to describe the free energy and zero field ordering temperature for the recently proposed uudd phase for b.c.c. He.-3. The possibility of first order transitions between the phases consistent with the high temperature susceptibility is discussed for each approximation. A prescription for adding four-particle exchange to these models is discussed. Dissert. Abstr.

ELECTRON-PHONON SCATTERING RATES IN ANTIMONY: RADIO-FREQUENCY SIZE EFFECT Ph.D. Thesis
Thomas Clifton OHara 1981 76 p
Avail: Univ. Microfilms Order No. 8126971

Temperature dependent radio-frequency size effect measurements were performed on high-purity, single crystal antimony plates at thicknesses of 0.592 mm, 0.347 mm, and 0.238 mm. The natural logs of the amplitudes of the data were found experimentally proportional to T(2) in agreement with previous measurements. However, the data were analyzed according to a model in which the electron-phonon scattering frequencies were proportional to T(3) with the explanation that the T(2) behavior is due to the small pieces of Fermi surface in antimony. The electron-phonon scattering frequencies were determined for both holes and electrons and were found to be highly anisotropic in each case. Copies of the computer programs used in the data analysis are included in Appendix I. Author

ZERO SOUND ATTENUATION FROM ORDER PARAMETER FLUCTUATIONS IN LIQUID He-3 Ph.D. Thesis
Vijay Kumar Samalam 1981 138 p
Avail: Univ. Microfilms Order No. 8127112

A microscopic theory to explain the excess attenuation observed was constructed. In this model it is assumed that the fluctuations are few in number and well separated so that they do not interact with each other. The effect of fluctuations on the single particle Green's function was calculated. The density of states changes in the presence of fluctuations in a way that foreshadows the superfluid transition. The language of many body perturbation theory was used to construct a transport like equation that is potentially capable of describing high frequency effects. It is shown that to calculate the fluctuations effects consistently, one must include the effect of fluctuations in the equilibrium functions. Dissert. Abstr.

INHOMOGENEOUS RELATIVISTIC ELECTRON SYSTEMS: A DENSITY FUNCTIONAL FORMALISM Ph.D. Thesis
Munegala Venkata Ramana 1981 144 p
Avail: Univ. Microfilms Order No. 8126974

The correlation energy of an unpolarized relativistic electron gas is numerically calculated by summing ring diagrams due to both the longitudinal and transverse photon contributions. From this a local relativistic correlation potential is deduced which appears in the density functional theory of inhomogeneous systems where relativistic effects make important contributions. The non-relativistic gas results are found to be significant underestimates. A fitted form of the correlation energy and potential were used in a self-consistent calculation of energies of atoms of large Z. Trends of the correlation contribution across the periodic table are evaluated. The role of the Breit interaction in a local approximation is evaluated through self-consistent atomic calculations. It is found that the full transverse interaction is underestimated by about an atomic unit in the systems investigated. The problem of the relativistic spin polarized electron gas is considered. The Green function is deduced and used to calculate the particle density, magnetization, exchange energy and potentials. Dissert. Abstr.

SOLITONS IN ONE-DIMENSIONAL CHARGE DENSITY WAVE SYSTEMS Ph.D. Thesis
Wu-pei Su 1981 213 p
Avail: Univ. Microfilms Order No. 8127079

Theoretical research on one dimensional charge density wave systems is outlined. A simple coupled electron-photon Hamiltonian is studied including a Green's function approach, molecular dynamics, and Monte Carlo path integral method. As in superconductivity, the nonperturbative nature of the system makes the physical ground states and low energy excitations drastically different from the bare electrons and phonons. Solitons carry quantum numbers which are entirely different from those of the bare electrons and holes. The fractional charge character of the solitons is an example of this fact. Solitons are conveniently generated by doping material with donors or acceptors or by photon absorption. Most predictions of the theory are in qualitative agreement with experiments. The one dimensional charge density wave system has potential technological importance and a possible role in uncovering phenomena which might have implications in relativistic field theory and elementary particle physics. ON A PROPOSAL FOR A CONTINUUM WITH MICROSTRUCTURE Ph.D. Thesis
Douglas John Bammann 1981 71 p
Avail: Univ. Microfilms Order No. 8127546

A model for a continuum with microstructure is further substantiated by identifying the microstructure with dislocations. The continuum is viewed as a superimposed state made up from a perfect lattice state, an immobile dislocation state, and a mobile dislocation state. It is assumed that each state evolves continuously in space-time and transitions from one state to another take place spontaneously according to the balance laws of effective mass and momentum. When plastic strain and yield are identified in terms of the parameters characterizing the dislocation states, familiar flow rules and yield surfaces are produced. The capability of the model to predict not only Tresca and Von-Mises plastic behavior but also phenomena such as Prager's kinematic hardening, different responses in tension and compression, latent hardening, and the Bauschinger effect, is shown. The appropriateness of the equations to model creep, cyclic plasticity, and fatigue, is illustrated. Author

POSITRON STUDIES OF POINT DEFECT INTERACTIONS IN METALS Ph.D. Thesis
Asko Vehanen 1981 9 p refs
(SF-02150) Avail: NTIS HC A02/MF A01

The clarification of elementary properties of atomic defects in metals is discussed, with an emphasis on the nature of interactions between various imperfections, especially, in relation to the mechanical behavior of materials. Trapping behavior into extended defects is presented both theoretically and experimentally. A model quantitatively accounts for the observed temperature dependent positron trapping. Very weak, hardly observable trapping is demonstrated and an experimental description of positron detrapping from monovacancies is presented. A strong impurity from vacancy interaction in nickel, where the void growth is nucleated by substitional antimony is shown. S.L.

RADIATION DETECTION WITH POINT-CONTACT JOSEPHSON JUNCTIONS Ph.D. Thesis
Tim Poorter 12 Nov. 1981 89 p refs
Avail: NTIS HC A05/MF A01

The first step toward producing a suitable heterodyne detector, based on a Josephson junction and incorporated in a complete 230 GHz receiver, was taken by placing a point contact Josephson junction in a 0.65 by 1.35 sq mm rectangular waveguide to operate it as a wideband receiver. From the spectral analysis of this response it was found that optimum coupling of radiation always took place from 170 to 200 GHz. To improve the radiation coupling at 230 GHz the waveguide system was scaled geometrically, resulting in a 0.56 by 1.06 mm waveguide. A Josephson mixer constructed with a very thin Niobium whisker as one of the electrodes, measurement indicated, can show a very low mixer noise temperature and a good conversion efficiency at a frequency as high as 200 GHz. THE INFLUENCE OF THE SPIN-ROTOR COUPLING OF METHYL GROUPS IN SOLIDS ON THEIR NMR RELAXATION Ph.D. Thesis

Dirk Jacob Ligthelm 24 Sep. 1982 235 p refs
(ISBN-90-6231-090-7) Avail: NTIS HC A11/MF A01

The NMR spin-lattice relaxation due to the hindered rotations of methyl groups around their three-fold axes in solids was studied. The effects of the rotor-phonon interaction on the motions of the groups were studied. There are processes occurring with an average frequency which cause the motions of a methyl group from one potential well to another. The activation energy decreases for decreasing temperatures while the correlation time at infinite temperatures increases. Processes occurring at higher frequencies are responsible for the occurrence of the effective tunnelling splitting which at low temperatures equals the change in free energy if a methyl group goes from A to E symmetry. Tunnel splitting decreases for increasing temperatures. The Zeeman relaxation rate for a powdered sample is discussed. The NMR technique used is described as well as a flow cryostat with which sample temperature can be varied between 5 K and 300 K. The sample can be rotated with a maximal spinning requency of about 100 Hz. The existence of a tunnelling-assisted maxima is demonstrated. A.R.H.

ELECTRON AND IMPURITY CORRELATIONS IN DOPED SEMICONDUCTORS

R. Kishore, I. C. daCunhaLima, M. Fabbri, and A. Ferreira daSilva Jan. 1982 17 p refs Submitted for publication
(INPE-2309-PRE/074) Avail: NTIS HC A02/MF A01

The theory for the specific heat of doped semiconductors, described by the Hubbard model with random transfer integral, is studied in the presence of a magnetic field and impurity correlations, incorporated through a hard core pair correlations function. The low temperature specific heat and the zero temperature susceptibility of uncompensated phosphorus doped silicon are calculated as a function of impurity concentration. Both electron and impurity correlations enhance the susceptibility and deenhance the specific heat. The behavior of the relative change in the specific heat due to the magnetic field agrees qualitatively with the low temperatures experimental results. S.L.

TWO DIMENSIONAL SUB-BANDS IN ION IMPLANTATION [SUB-BANDAS BIDIMENSIONAIS EM IMPLANTACOES RASAS]

E. Granato Jun. 1981 12 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBRC, Salvador, Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2147-RPE/369) Avail: NTIS HC A02/MF A01

Confinement near the surface, produced by shallow ion implantation on opposite type substrates, can lead to the formation of two dimensional subbands in a way similar to what occurs in the inversion layers of MOS devices, and can give rise to a substantial separation of the minima of those subbands. The motion of carriers perpendicular to the surface is quantized by the space charge potential. Approximate analytical solutions for the values of subbands minima are presented assuming a simplified model for the electronic potential. Results for Si implanted with phosphorus are presented. ELECTRICAL RESISTIVITY OF P IONS IMPLANTED ON SI [RESISTIVIDADE ELETRICA DE IMPLANTACOES RASAS DE P NO SI]

E. Granato, R. Ranvaud, A. Ferreira daSilva, and I. C. daCunha Lima Jun. 1981 10 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador, Bahia, Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2145-RPE/367) Avail: NTIS HC A02/MF A01

A thin layer (nearly 200 A) was produced using low energy implantation of P in Si which, due to the potential barrier of the junction formed, do not allow electrons to escape in the perpendicular direction of the surface. The impurity concentration of this layer was varied using different implantation doses. The resistivity was measured as a function of temperature and concentration in the quasi-two dimensional system so formed in an effort to give evidences on the change of the relative importance of the electric conduction mechanism, connected to the free carriers and impurities. ELECTRONIC STATES OF A NEGATIVE ION DONOR IN SEMICONDUCTORS [ESTADOS ELETRONICOS DE UM ION DOADOR NEGATIVO EM SEMICONDUTORES]

A. Ferreira daSilva Jun. 1981 4 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador, Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2092-RPE/322) Avail: NTIS HC A02/MF A01

The possibility of the existence of a negative donor ion D(-) in semiconductors in which a donor atom captures one electron like a hydrogen negative ion, was suggested in 1958 by Fritzsche and Lampert. There is a great deal of interest in the D(-) center in various semiconductors such as silicon and germanium. According to Fritzsche, the intermediate concentration range of impurities is characterized by the electrical conductivity with an activation energy in a certain temperature region. A D(-) band (in addition to a lower band D) was considered as the most probable origin for the activation energy. However, few experimental results for clarifying the existence of the D(-) band are reported. The H(-) and 1 sigma sub u (H+H yields H(-) + H(+)) states were investigated and compared with the other calculations. Author

EFFECTS OF ELECTRON TRANSFERENCE ENERGY IN

SEMICONDUCTORS [EFFEITOS DA ENERGIA DE TRANSFERENCIA DE ELETRONS EM SEMICONDUTORES]

M. Fabbri, A. Ferreira daSilva, I. C. daCunha Lima, and R. Kishore Jun. 1981 11 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2129-RPE/353) Avail: NTIS HC A02/MF A01

The behavior of impurity in semiconductors is investigated via the electron transfer energy-integral. The resistivity of Ge:Sb is calculated for various types of transfer integral and compared with the experimental results. Neglecting localization effects, the variation of the energy gap Ag between impurity bands is compared with the experimental activation energy e2 of Si:P and Ge:Sb, for different concentrations. A qualitative agreement with the experiment has been found. Author

ELECTRONIC STRUCTURE OF THE D(-) STATE AND EXCITED DONOR STATES OF GRAIN IMPURITIES IN DOPED SEMICONDUCTORS [ESTRUTURA ELETRONICA DO ESTADO D(-) E ESTADOS DOADORE EXCITRONICOS DE IMPUREZAS RASAS EM SEMICONDUTORES DOPADOS]

A. Ferreira daSilva Jun. 1981 8 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador Brazil, 8-15 Jul. 1981 Submitted for publication
(INPE-2115-RPE/339) Avail: NTIS HC A02/MF A01

The previously developed self consistent effective Hartree-Fock Hamiltonian model with a spin polarized potential is applied in order to get correct value for D(-) state in doped semiconductors at very low impurity concentrations. The experimental value E sub D(-) = 0.0555 R (sub y) below the host conduction band was found. Just below the critical impurity concentration, the exciton states and pairs should modify the Mott-Hubbard-Anderson model, according to recent experiments, replacing the upper Hubbard band for those states. The disordered system as well as correlation effects are carried out by simulation on a computer. Author

CORRELATION IN DOPED SEMICONDUCTORS [CORRELACAO EM SEMICONDUTORES DOPADOS]

Mauricio Fabbri, Antonio Ferreira daSilva, and Ivan Costa deCunha Lima Jun. 1981 12 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador, Bahia, Brazil, 8-15 Jul. 1981
(INPE-2108-RPE/334) Avail: NTIS HC A02/MF A01

Impurity bands were investigated further in order to show how sensitive the resistivity is in n-type doped semiconductors to changes in electron correlation. The effect of correlation as well as overlap on the electron hopping energy integral are taken into account via Heitler-London two particle wave functions. The magnitude of the electron hopping energy integral is reduced. The electron correlation substantially reduces the bandwidth via the cut off of the long range hopping. The impurity level tends to the ionization energy = - 1.0 as Rij yields infinity. The calculated resistivities for Si:P, Ge:Sb and CdS:In when compared to the experimental data present good agreement around and above the impurity critical concentration for the metal-nonmetal transition. The comparison with AMO-MT calculation shows a big enhancement due to a stronger electron correlation. Author

SUBMICRON FETS USING MOLECULAR BEAM EPITAXY Final Report, Aug. 1977 - Sep. 1981

S. Bandy, Y. Chai, R. Chow, T. Gibbs, C. Hooper, C. Nishimoto, and P. Stonestrom Oct. 1981 53 p refs
(Contract N00014-77-C-0655; RF62581001)
(AD-A108556) Avail: NTIS HC A04/MF A01 CSCL 20/7

Using electron-beam exposure and MBE GaAs, FETs have been fabricated with gate lengths of around 0.25 micron. A noise figure of 1.1 dB with an associated gain of 14 dB has been measured at 8 GHz. A new technique to increase the gate cross-sectional area by employing a mushroom gate profile reduced the gate resistance by about a factor of six, but this dramatic reduction in input resistance resulted in only 0.2-0.3 dB improvement in the measured minimum noise figure. Because of this, it is felt that there is a problem of matching such a high Q input with the rather lossy microstrip technique used, resulting in an inaccurate measurement of the noise figure. THE ELECTRICAL PROPERTIES OF Na3Cu4S4, MIXED-VALENCE ONE-DIMENSIONAL METAL

Zbigniew Peplinski, David B. Brown, Timothy Watt, William E. Hatfield, and Peter Day 1 Dec. 1981 20 p refs Prepared jointly with North Carolina Univ. and Oxford Univ. Submitted for publication
(Contract N00014-76-C-0816; NR Proj. 053-617)
(AD-A108517; TR-23) Avail: NTIS HC A02/MF A01 CSCL 20/3

Four probe electrical conductivity measurements from 15-300K demonstrate that the mixed-valence compound Na3Cu4S4 is metallic. Measurements on single crystals reveal that the conductivity is highly anisotropic, with enhanced conductivity parallel to the crystal needle axis, corresponding to pseudo one-dimensional (Cu4S4(3-)) columns in the structure. For single crystals, resistance increases from 1/15000 ohm cm at 300 K to 1/300,000 ohm cm at 15 K. A small, temperature independent magnetic susceptibility is consistent with metallic

behavior. Diffuse reflectance spectra support the formulation of this compound as a Class III B mixed-valence S(2-)/S(-) solid.

This technical report contains a description of a quasi-two-dimensional model for GaAs FET operation. The model is based on modified expressions for the carrier continuity and Poisson equations in the conducting channel of an FET. The model is compared to full two-dimensional results to determine its accuracy. It is then used to study a variety of operating conditions. The effect of various material and device parameters are also discussed.

Electron-beam-induced current and low temperature photoluminescence have been used as minority-carrier probes to investigate the perfection of beam-annealed silicon. Results for both laser and electron-beam annealing are reported. For CW laser annealing of ion implantation damage, the range of laser power over which good quality annealed material can be achieved is very limited, and strongly dependent on the substrate temperature during the anneal. At relatively high laser power, Laser-induced damage is observed, and misfit dislocations are introduced for laser power just below that required to melt the substrate. Superior results are obtained with the use of a scanning electron beam for annealing: the range of beam power is broader, and the amount of beam overlap for subsequent scans required to achieve good annealing is less for the electron-beam case compared to the case of laser annealing. Both EBIC and photoluminescence results indicate that the laser-induced damage is produced deeper in the substrate than the implanted layers. Estimates of the lattice displacement resulting from strain after laser annealing are made from the details of the photoluminescence spectra; this lattice displacement is found to be small, corresponding to 0.01% of the lattice constant. The growth and characterization of high purity and chromium doped GaAs and Al, GaAs for buffer layers in high performance GaAs FET's was carried out. Deep level transient spectroscopy was used to measure electron traps in Schottky diodes and GaAs FET's. The investigation of microwave field-effect transistor performance limits set by layer composition and contact geometry was carried out. Critical physical electronics parameters for very high voltage operation of GaAs FET's were determined. The electric field distribution and the parasitic output conductance due to buffer layer current were studied and optimized. The use of MBE tailored doping profiles for improved microwave device operation was studied. GaAs/Al, GaAs selectively doped heterojunctions were grown by MBE and studied for potential use in high performance transistors. High electron mobility (80,000 sq cm/v-s) at 77K was first obtained in this effort, following the optimization of the growth conditions of the Al, GaAs. In addition, high resistivity Al, GaAs buffer layers for power FET's were obtained.

TRANSIENT CAPACITANCE MEASUREMENTS OF DEEP LEVEL DEFECTS INTRODUCED IN BETA-RAY COMPENSATED GERMANIUM BY LONG-TERM ANNEALING AT ROOM TEMPERATURE

S. J. Pearton, A. A. Williams, A. J. Tavendale, and E. M. Lawson Sep. 1980 25 p refs Prepared jointly with Australian Atomic Energy Commission, Lucas Heights
(AAEC/E-501; ISBN-0-642-59698-0) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

Deep level transient spectroscopy (DLTS) was applied to defect centers in beta-ray compensated germanium that was subjected to long-term annealing at room temperature. Deep donor levels were observed for the first time; annealing 675 C for 3 hours increased their concentration in proportion to the free carrier density, indicating stable defect-impurity complexes. Recently irradiated samples from the original material do not show these levels.

ON THE CONDITIONS REQUIRED FOR VACANCY LOOP GROWTH IN IRRADIATED METALS AND ALLOYS

M. R. Hayns Jul. 1980 37 p refs
(AERE-R-9810) Avail: NTIS (US Sales Only) HC A03/MF A01; DOE Depository Libraries

A simple theoretical model is investigated which allows the conditions under which vacancy dislocation loop growth is possible to be examined. This forms an extension of previous work in that bulk defect recombination is not ignored and the effects of vacancy thermal emission are included. While the present work does not provide a kinetic model for vacancy loop growth it was possible to examine the criteria required for stable growth in some detail. The effects of network dislocation density, temperature, damage rate, the influence of other critical sinks, notably voids and grain boundaries, and interstitial dislocation loops were considered. The analog with the growth conditions for cavities as voids is highlighted. A detailed comparison with experiment is not attempted as this is being considered separately. DOE

N82-19077# Tasmania Univ., Hobart (Australia).
TRANSIENT CONDUCTANCE SPECTROSCOPY MEASUREMENTS OF DEFECT STATES IN GAMMA-IRRADIATED N-CHANNEL SILICON FIELD EFFECT TRANSISTORS WITH POSSIBLE GAMMA-DOSEMETER APPLICATIONS
S. J. Pearton, A. J. Tavendale, and A. A. Williams Dec. 1980 14 p refs
(AAEC/E-504) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

A deep level transient capacitance spectroscopy (DLTS) system, modified for the measurement of transient conductance, was used to observe gamma-ray induced defect centers in the gate junction of 2N4416 Si field effect transistors. The defect concentrations increased linearly with gamma-dose in the range 50 kGy to 1 x 10 to the 4th power kGy (5-1000 Mrad) for the common Esub(c) - 0.17 eV level, and in the range 500 kGy to 1 x 10 to the 4th power kGy (50-1000 Mrad) for the levels Esub(c) - 0.22 Ev and Esub(c) - 0.44 eV. Another common level, a hole trap at Esub(v) + 0.42 eV, was the only minority trap observed. The technique may be useful for measuring gamma-fluxes in situations inaccessible to standard dosemeters (e.g., flux-mapping). DOE

RANDOM ANISOTROPY IN ISING SPIN GLASS
M. Cristina Forti, R. Kishore, and I. C. daCunhaLima Nov. 1981 18 p refs Submitted for publication
(INPE-2277-PRE/055) Avail: NTIS HC A02/MF A01

The theory of Ghatak and Sherrington for the Ising spin glass with uniform uniaxial anisotropy were extended for the random uniaxial anisotropy (RUA). The magnitude of the RUA is assumed to fluctuate randomly with Gaussian probability distribution. The susceptibility and the specific heat have been calculated for a system of spin one and zero mean values of the anisotropy and the exchange interaction. It is found that the random fluctuations of the anisotropy produce a cusp in the susceptibility and a broad maximum in the specific heat. Author

THE 1981 SUMMER RESEARCH FELLOWSHIP PROGRAM
Final Report, 1 Jun. - 7 Aug. 1981
John H. Spencer, comp. Oct. 1981 36 p refs
(Contract NAS1-16455)
(NASA-CR-165814) Avail: NTIS HC A03/MF A01 CSCL 05I

The NASA-Hampton Institute Summer Research Fellowship Program, offering capable scientists and engineers at traditionally black institutions an opportunity to participate in research activities in an environment at the Langley Research Center where basic research is of primary importance is considered. The Summer Research Fellowship Program, specifically designed to assist these faculty members in identifying areas of research which correlate positively with their individual interest and capabilities is discussed. It is also designed to help them to initiate viable research which increases their technical knowledge about how research efforts at their institutions might be increased. Author

THE GLOBAL 2000 REPORT TO THE PRESIDENT. ENTERING THE TWENTY-FIRST CENTURY, VOLUME 1
Gerald O. Barney 1981 59 p refs Prepared jointly with the State Dept. 3 Vol.
(PB82-100801) Avail: NTIS HC A04/MF A01; also available in set of 3 report HC E99 as PB82-100793 CSCL 05K

The President's directive establishing the Global 2000 Study called for a study of the probable changes in the world's population, natural resources, and environment through the end of the century and indicated that the Study as a whole was to serve as the foundation of our longer-term planning. To meet the objectives stated in the President's directive, the Global 2000 Study was designed not only to assess probable changes in the world's population, natural resources, and environment, but also, through the study process itself, to identify and strengthen the Government's capability for longer-term planning and analysis. GRA

THE GLOBAL 2000 REPORT TO THE PRESIDENT. ENTERING THE TWENTY-FIRST CENTURY, VOLUME 2
Gerald O. Barney 1981 779 p refs Prepared jointly with the State Dept. 3 Vol.
(PB82-100819) Avail: NTIS HC A99/MF A01; also available set of 3 reports HC E99 as PB82-100793 CSCL 05K

The basic plan for the Global 2000 Study was to identify the long-term global models currently used by Government agencies and to establish a set of uniform assumptions so that these models and tools could be used by the agencies' projection experts as a single, internally consistent system. Since the models and tools used are the ones now employed by the agencies in their long-term global analyses, they reflect the present foundation for long-term planning. GRA

THE GLOBAL 2000 REPORT TO THE PRESIDENT. DOCUMENTATION ON THE GOVERNMENT'S GLOBAL SECTORAL MODELS: THE GOVERNMENT'S GLOBAL MODEL, VOLUME 3
Gerald O. Barney, ed. 1981 412 p refs Prepared in cooperation with the State Dept. 3 Vol.
(PB82-100827) Avail: NTIS HC A18/MF A01; also available in set of 3 reports HC E99 as PB82-100793 CSCL 05K

This third volume of the Global 2000 Study presents basic information ('documentation' as it is termed by modelers) on the long-term sectoral models used by the U.S. Government to project global trends in population, resources and the environment. These models were the basis of the projections developed for the Global 2000 Study. Each of the sectoral models described in this volume is a Government developed or Government endorsed model. Most of the models were developed directly by Government agencies. Three of the models, the GNP model, the nonfuel minerals demand model, and one of the population models, were developed by non-Governmental organizations, but have been applied or recommended by one or more Government agencies as being the best models available for the particular types of projections they provide. EFFECTIVE METHODS FOR OVERALL PROJECT COST REDUCTION [EFFEKTIVE VERFAHREN ZUR GESAMTPROJEKTKOSTEN-REDUZIERUNG]
Bernd-J. Madauss 16 Oct. 1980 26 p refs Partly in GERMAN and ENGLISH Submitted for publication
(MBB-UR-456-80-O) Avail: NTIS HC A03/MF A01

Effective techniques for life cycle cost reduction are discussed. Life cycle cost, or total project cost are: development cost, production, import, operation and if necessary, termination of a system. The total cost analysis for a newly developed system, like airplanes of power plants, is introduced as early as possible to avoid errors, since not only the initial system purchase cost (development and construction), but also the later added expenses are of great importance. Effective measures for total project cost reduction are proposed. Transl. by E.A.K.

FEDERAL FUNDS FOR RESEARCH AND DEVELOPMENT, VOLUME 29, FISCAL YEARS 1979, 1980 AND 1981 Final Report
Jan. 1981 59 p refs
(PB82-118902; NSF-81-306) Avail: NTIS HC A04/MF A01 CSCL 05A

The report covers Federal agency R&D funding, as shown in the 1981 revised budget. The analysis covers R&D program levels for 1979-81, focusing on relative changes from 1980 to 1981, after the budget revision, with indications of subsequent congressional appropriation actions, where known. It includes data on basic research, applied research, and development; on performers of R&D work (intramural, industrial, university-and-college, etc.); on research by fields of science; and R&D data for 1979 by geographic (State) distribution. The publication includes a section on R&D funding by budget function (national defense, space, health, energy, etc.) in the 1981 budget and in prior years and another section on Federal R&D support to performers since 1955 with special emphasis on university-and-college support. NON-FEDERAL COMPUTER ACQUISITION PRACTICES PROVIDE USEFUL INFORMATION FOR STREAMLINING FEDERAL METHODS Report to Congress
2 Oct. 1981 34 p refs
(PB82-120924; AFMD-81-104) Avail: NTIS HC A03/MF A01 CSCL 05A

Eighteen non-Federal organizations showed that their managers are committed to using the computer effectively as a tool for achieving business goals. Their strategies and plans provide a framework and operational direction for computer acquisitions. Their practices and procedures are understood, followed, and consonant with normal business practices. GAO found that the 18 organizations studied normally completed computer equipment acquisitions in under a year. The study discusses their practices and procedures. While GAO does not endorse the specific procurement practices, it is believed Federal agencies should consider using the other practices to streamline their acquisition processes within the context of current laws and regulations. GRA

FULL TEXT INFORMATION SYSTEMS: A REVIEW AND

ASSESSMENT OF THE TECHNOLOGY M.S. Thesis
John W. T. Smith 1980 150 p refs
Copyright. Avail: Issuing Activity

The technologies and systems that could be used to implement a future full text information system are considered. Systems that can be considered as stand alone full text information systems, each unit capable of serving a limited number of users, are discussed. These are evaluated for their access times, storage capacity, and their ability to be interconnected with other information processing equipment and communication systems. Technologies that could be used to link some of them together to form a large, even global full text information system are discussed. The 'state of the art' of full text information systems is reviewed and three possible scenarios for the development of such systems are advanced. N.W.

COMMON DATA BASE EXPERIMENT: PROGRESS REPORT ON DATA ANALYSIS Progress Report
Gunnel Barkeby, Nils-Olov Bergkvist, Ola Dahlaman, Peder Johansson, Harriet Ohlsson, and Falguni Roy (Bhabha Atomic Research Centre, Bombay) Nov. 1981 78 p refs Presented at Comm. on Disarmament Seismic Expert Group Meeting, Geneva, Aug. 1981
(FOA-C-20431-T1) Avail: NTIS HC A04/MF A01

Bulletins and wave form data from stations linked to an international seismic data bank are presented as a step towards establishing an international verification system. Epicenter locations by array stations prove valuable for the assocation of arrival times and for the definition of events. Estimated depth remains an uncertain source parameter. Data on magnetic tapes are not fully exploited because the lack of standards for tape formats and tape format descriptions makes them difficult to read. Long period data can be extrapolated from short period recordings. Author (ESA)

ON EMPIRICAL FOUNDATIONS OF INFORMATION SCIENCE Final Report
Pranas Zunde Jul. 1981 654 p refs
(Grant NSF DSI-77-05297)
(PB82-125998; GIT-ICS-81/14) Avail: NTIS HC A99/MF A01 CSCL 05B

Pertinent empirical laws and hypothesis which have been reported in scientific and technical literature were catalogued, described, and analyzed for their dependencies and relations. A body of knowledge derived from empirical observations of information phenomena and representative of information science as a distinct scientific discipline was identified. Concepts such as information value, relevance, aging of information, growth of knowledge, obsolescence, information scatter, productivity of information sources and information flow are considered. Over 300 empirical laws and hypotheses were selected, analyzed, and catalogued. Each of these laws was indexed by a set of terms (keywords) reflecting every significant concept (construct) in the statement of the law or hypothesis. GRA

VOLUME 2: MAIN REPORT [L'INCIDENCE FISCALE DES ACTIVITIES DE L'AGENCE SPATIALE EUROPEENE. ESTIMATION DU RETOUR D'IMOP IMPUTABLE A 'ACTIVITE DE L'ESA ET DE L'IMPACT ECONOMIQUE GLOBAL A COURT TORME DONT IL EST ISSU. VOLUME 2: RAPPORT PRINCIPAL]
Jean-Alain Heraud and Ehud Zusconitch Paris ESA Jan. 1981 80 p In FRENCH
(Contract ESA-3702/78/F-DKR(SC))
(ESA-CR(P)-1472) Avail: NTIS HC A05/MF A01

The effect of ESA activities on the public was evaluated by a two step procedure. The total economic impact of space expenditures was assessed and the supplemental national revenue thus created which returned to the member states by simple fiscal tension was determined. The results prove that macroeconomic benefit obtained by the assembly of member nations from their involvement in ESA activities is substantial. The mean value of the rate of return of taxes shows that space activity represents a self remunerative activity for the public treasury.

NASA TECHNOLOGY UTILIZATION HOUSE TECHNICAL SUPPORT PACKAGE SUMMARY OF RESULTS AND HOUSE DESCRIPTION Final Report
Aug. 1979 83 p
(NASA-TM-X-74686) Avail: NTIS HC A05/MF A01 CSCL 13M

The Technology Utilization House (Tech House) was designed and constructed to demonstrate to the building industry and the public the benefits of aerospace technology and other new technology that are presently available or will be in very near future. Use of solar energy, conservation of energy and of water, safety, and security were incorporated in the design of the house. The terms to be incorporated into the house and to assist in the design of the house were evaluated. An architectural engineering team was employed to investigate energy conservation ideas, determine cost effectiveness of new materials and systems, and prepare specifications and drawings for the house. The Tech House was constructed during the spring of 1976. All the systems were monitored to insure proper operation, and data were collected during a one year occupancy. Results obtained during the family live-in period, comments on the acceptance of the various energy-saving systems by the family, and suggestions for improvement of the systems are presented.

MOBILITY BIBLIOGRAPHY
N. Liston, comp., M. Hutt, comp., and L. White, comp. Nov. 1981 333 p Prepared in cooperation with the International Society for Terrain-Vehicle Systems
(AD-A108228; CRREL-SR-81-29) Avail: NTIS HC A15/MF A01 CSCL 15/5

This bibliography is an international compilation of literature relating to terrain vehicles, amphibious vehicles, snow vehicles, air cushion vehicles, tracked vehicles, wheeled vehicles, and off-road vehicles. It also covers the related subjects of rolling resistance, traction, snow strength measurement, soil strength measurement, terrain analogs, vehicle models, and the overall topic of vehicle mobility. It is not comprehensive but begins at about 1970 and ends in 1980. The European coverage is lacking because much of this material is not accessible by computerized literature searching, which was the mechanism used for compiling this bibliography.
